I'm not aware of any proximity devices that would display the RDS info. It's conceivable though. A radio receiver could be equipped with, perhaps, BlueTooth technology, which could make it possible to send the info to a BlueTooth cell phone, for instance.

We've veered way off topic, and I'm not going to push through posts in this thread to rec.radio.broadcasting anymore. If you want to continue posting in this thread in newsgroups other than RRB, that's your choice, but no more in RRB. The thread stopped being about radio after (roughly) the second post, or maybe the third.

Cheers,
Steve [RRB Moderator]

And how was the hurricane the fault of the power company? My uncle is down there right now helping FPL to reassemble your local electric grid because it was largely trashed by Frances. He's a lineman here in NC who volunteered to join the thousands of linemen and technicians from other states who rushed in to assist FPL in this time of crisis. Those guys have a tough and often risky job but they're busting their butts to get it done. Are you doing anything to assist other than whining about it in a newsgroup?
I think you owe them an apology.

The U.S. has already roled out terrestrial digital. For quite a long time now, (several months) WKKY 104.7 FM in Geneva, Ohio has been broadcasting digitally.

They announce it on the air all the time since they started broadcasting digitally months ago.

Mr. Perry,

I've been laughing "since" I read your post; it made so little "sense". Your composition could be "harmful" to the broadcasting community. You might be a "freaking" genius, but my third grade English teacher would argue otherwise. In fact, it seems the "existence" of school may be a foreign concept to you. As academic "tornadoes", folks here may well fling you aside. It's "possible" you shouldn't be posting to Usenet at all if its readers focus on your errors instead of your point.

Is it any wonder we argue so much in this country when so many of us do not have enough basic education to read beyond the daily doses of op-ed rhetoric?

Many station groups have long limited commercial percentages to well below what is considered excessive. There is nothing new in this. Oddly, back in the 50's and 60's when many claim such great radio was done, the FCC had to actually create an implied guideline of 18 minutes an hour. Most stations today are well below that, and one I work with are in the 10 minute range consistently.
>
> Problem is, if you are programming shit, you can only charge $5 a spot.

Advertisers do not call stations, especially big ones. Radio does not work this way, advertising does not work this way, marketing does not work this way

> Finally someone here that talks some sense.

This is nothing new. I ran a top rated FM in the late 60's that ran 2 minutes of spots an hour. It billed as much as any station in the market. There are plenty of examples of this.

When it comes to music, that's not true at all.

Unless you have the longest TSL the world has ever seen, the DJ's will naturally get tired of hearing a song LONG before the listeners do.

If you've ever done any kind of research, you'll know that when 'burn' starts to affect favorablity is when the audience is tired of it; not until. That takes a LOT longer for listeners than it does for air performers (who hear the songs a LOT more often). THAT'S when you either cut back the appearence of a song or drop it. Until then, it's NOT a neagative to the listeners.

You are not programming to the air performers so, to be blunt, if they're tired of a song, it really does not matter what they think or reflect how the listeners feel.

To all those livivng in the UK,
i would like to ask you what your thoughts are on the representation of crimein the media where you live. Do you think that media such as the newspapers are giving out this information correctly?
Do you think that the way in which the media exaggerate some stories can lead to moral panics?
Can you think of any advantages or disadvantage that the media have when reporting these crime stories?
I would be grateful for your thoughts on this topic.
Thanks
tasha

by George i think hes got it!

consider: CO2 is necessary for tree/plant life. human/animal waste products enrich the soil, which aids plant growth. which provides healthy food, which gives us humans more time to build and operate radio stations for the enjoyment of the multitudes. the more people the more the cume and TSL therefore the more cash flow and life is wonderful.

searching back trying to find who added all these freaking cross posts... this thread just started out in alt.radio,alt.radio.broadcasting

Well, if the utilities down there put the wires underground, they wouldn't have problems with the trees ripping them down. Of course, that is also the case here in North Carolina, where ice storms cause millions of outages, lasting weeks at a time. (Remember two years ago?) -- I had no power, heat etc for several days. Parts of the city were without for 2 weeks.

After just a few days people get grumpy. Then gain, if they are smart, they buy a generator big enough to handle their house, and stay warm/cool/whatever when the rest of the neighborhood is dark.

>Would you consider this a legal ID or a bogus ID? I say "bogus", but the tv station obviously says "legal".<

The pertinent FCC rule (47 CFR §73.1201) contains no requirement as to the font size of a visual legal ID. It does say that TV stations may ID *either* aurally or visually.

I quite frankly urge all kids to smoke. And all adults too. It can
only help the environment, the national budget and the darn check out
lines.

>> I know many transmitter engineers, AM & TV, that had cancer-type
>> diseases as they retired.
>
>Just wait until all the kids using cell phones today don't live to even get to
>retirement age.

And thats a bad thing? Dont you realize the US has less than 100 years
left of existence if mortality rates continue to decline, and live
much longer while still reaching senility approximately the same age?
Larger numbers of people need to realize thier duty is to die if they
continue to exponentially reproduce or the clean water wont be there,
the food wont be there, and the government will literall go bankrupt
trying to provide care for them (us) all.

>
>> And as far as trusting the government reports on NIEMR, would this be
>> the same government that (a) gave all the broadcast stations to big
>> corporate donors, or (b) told all rescue workers at the WTC that the
>> air was safe, or (c) found huge piles of WMD in Iraq?
>
>Yes, so how can you say you would believe them when they say smoking would be healthy
>as you did above?
>
>Forget it, I don't even want to know.
>
Geez, lighten up. You have problems about dying. Get over it. It will
get you. Do what you want while you are here. Have some fun. You may
die. Oops, I mean, you WILL be dying! And the cool thing about it is
you wont know it happened, you wont care and you wont feel it (being
dead).

So since all OTA stations are buggy whips trying another foolish
polish (HD Radio).... they wont be around too much longer anyhow.

Might have trouble with the roots of the trees ripping them up as they pull
out of the ground. And then there is the problem of gnawing animals.

A few years ago I was driving around the countryside near Plymouth, England.
I was surprised that the utilities were underground even out in the
countryside. I never figured out whether this was some "Beautiful Britain"
scheme or because of the frequent gales they get along the English Channel.

CKLW's IDs certainly were the best of their time, Lee. Ken R in Toledo has all of the CK jingles on a CD....well worth the price, I might add.

Also among my fave IDs were those on WHYT/Detroit during its Hot Hits heyday and the Hitradio incarnation, and WCZY 95.5 FM's IDs when Gannett owned it.

They just don't make catchy IDs like those anymore. Kinda sad, but that's the way our biz is now.

For sale:

The "Radio Crazy" is baaaaaakkkkk!!! Hi Hi!

Partial interest in AM daytimer in small Alabama city.

This is a joint venture. There is an element of risk
and you could lose all or part of your investment. You
heard if first here, kiddies!!

Active or inactive investors with $5,000 min. each are
welcome. All investors would be on the board with full
voting rights if desired.

No investor may hold over 49 percent. This means me
too!

Total consideration for the station is $60,000 asking
price. It is a 1 KW daytimer, non-directional. NO real
estate is included.

Almost 120,000 people live in the "primary" (0.5
mv/meter)contour.

Tel: (478)741-1710 in Macon,GA.

Amateur Radio Newsline™ Report 1413 – September 10, 2004

Amateur Radio Newsline report number 1413 with a release date of
Friday, September 10th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Hurricane Frances strikes Florida and ham radio is prepared. Hear the ham radio first responders in action on Amateur Radio Newsline report number 1413 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HURRICANE FRANCES VS. HAM RADIO

Hurricane Frances pounded Florida with high wind and heavy rain after it smashed across the state's East coast. Close to 4 million residents lost power and telephone service. Cellular phone networks that survived Frances’s gale force winds quickly became overloaded. Enter ham radio. Amateur Radio Newsline’s David Black, KB4KCH has been following the story from our South-East bureau in Birmingham, Alabama:

--

When Hurricane Frances hit Florida on Labor Day weekend, the storm ripped roofs off buildings, toppled trees and cut power to about 4 million people. Also lost was part of the states telephone and cellular service. This created a communications vacuum.

But hams affiliated with SATERN - the Salvation Army Team Emergency Radio Network, A-R-E-S, and the Hurricane Watch Net were expecting Frances. Radio amateurs had been tracking this storm as it ravaged its way across the Caribbean. And it was ham radio that let the world know of the destruction the giant storm had caused as it hit some of the islands:

--

“Roger roger. On Elutheria Ill say about 40 percent of the structures have damage. In the Rainbow Bay area where I live I would say about 70% of the hhomes here have structural damage. Over.”

--

Once a Category 4 hurricane with winds of 145 mph, Frances had weakened to a Category 2 storm as it neared Florida. Winds dropped to a peak of 105 mph as it made landfall at Sewall's Point, north of Palm Beach, around 1 a.m. Eastern Daylight Time on Saturday, September 4th. Ham radio operators affiliated with

the Hurricane Watch Net tracked its approach:

--

“This is KA5E with the Hurricane Watch Net. We are currently taking measured weather reports out of the affected area for Hurricane Frances. Do I have any stations on with pdates or signifigant weather reports. KA5E, over.”

--

The powerful storm hit Florida with ferocious winds and sheets of rain. The hurricane was so large and slow moving that its western outer edges had began arriving on the east coast on Saturday morning. On Sunday morning its eastern edges were still pounding the coast from which 2.5 million people had been told to flee. Repeaters interconnected using I-R-L-P and Echolnk were pressed into service to help coordinate the latest round of evacuations:

--

“KC4PNC KB1CYO net control. Go ahead sir,”

“They have called for mandatory evacuation for Hillsboro county for manufactured homes and also mobile homes. They have not ordered a mandatory for low lieing areas but they are strongly recommendng it.”

--

And as evacuee’s poured into shelters, communications volunteers were needed. A call was put out over the interlinked repeater network and the hams responded

--

“We are looking for any volunteerr Amateur Radio operators to help with shelters. We have eight shelters open right now. Those are being manned. However, since its a declared evacuation all of the other shelters will be opened and we are looking for vlunteers to man those shelters. KC4PNC.”

--

As Frances path of destruction hit Florida's central Atlantic coast counties, blinding rain squalls drove clouds of sand into the air. At the same time high waves thundered onto the beaches. One ham watched as his rain gage was torn away and white caps pounded ashore:

--

“Any kind of rainfall accumulation?”

“No, that gage blew away but I can tell you that we are in a high tide area right now and I can see the tides up about a foot and a half and I have water coming over my seawall. But its not a problem. We are still at a much higher elevation. The water is over the seawall along the Intercoastal Waterway.”

--

As palm trees rained coconuts and then toppled over and buildings suffered extensive damage there was also a tragedy at sea. And the U-S Coast Guard turned to Amateur Radio for help:

--

“I want to remind the net that the Coast Guard has asked us to lend assistance in the search for the Anna Marie. It is a vessel that went down off the coast of Sarasota this evening about 10 to 12 miles out. Any assistance or any information on the Anna Marie that went down with the crew 10 o 12 miles out of Sarasota, the U.S. Coast Guard would appreciate your assistance.”

--

At airtime its not known what happened to the Anna Marie nor the fate of its crew. But as the search continued, there was yet another threat. Early on Sunday the 5th, the massive weather system spawned a tornado, and the warning went out over the I-R-L-P ham radio network:

--

“The tornado is expected to be by Bostwick by by 2:45 Eastern, Forholm by 3:00 a.m. and thats all I have.”

--

As that twister touching down the National Weather Service office in Jacksonville issued a tornado warning for Northern Clay County including the city of Orange Park. Also affected were St. Johns, Clay, and Putnam Counties. And as dawn was breaking radar picked up a developing tornado near Doctors Inlet moving West at 45 mph. Only some damage to roofs was reported.

But reporting weather was not the only chore radio amateurs were involved in. Another as health and welfare. Letting worried relatives and friends know about those stuck in Frances path. Many like this central American station who was happy to hear that the hurricane was headed away from his daughters location:

--

“OK. Great. Thank you very much. I appreciate that information. We are here in a location where we do not have any TV or any other communication. We are on the beach on the West coast of Panama. So thanks very much I do appreciate it. This is HB1XRO and the handle is Bob.”

--

By Monday afternoon, Frances had crossed the eastern Gulf of Mexico and made its second landfall in Florida's northwest Panhandle section some 20 miles south of Tallahassee. Now it only a tropical storm with sustained wind near 65 mph. Damage was mainly to power and telephone lines. At that point the forecasters were predicting the storm would move north-northwest at about 8 mph, and was not expected to regain hurricane strength.

Frances soaked Georgia, dumping 11 inches of rain in a 24 hour period in the town of Patterson.

Media reports blame Frances for at least seven deaths in Florida, including two people who were killed Saturday when the roof of he building they were in collapsed. There were also two deaths in the Bahamas. One of these was a teenager who was reportedly electrocuted when he tried to hook up a generator to a power mains that was still on.

With thanks to the hams who supplied the storm audio over the Internet used in this report, I'm David Black, KB4KCH at the South-East bureau in Birminham Alabama for the Amateur Radio Newsline. (ARNewsline(tm))

RESCUE RADIO: HAM RADIO PREPARES FOR IVAN

And its not over yet. As we go to air Hurricane Ivan is making its way cross the Caribbean and could strike the United States. CQ's newsdesk reports that Amateur Radio at the National Hurricane Center, WX4NHC, was to be reactivated for Hurricane Ivan at 2 PM EDT Thursday, Sept. 9, and will be active on Friday-Sunday 8 AM-11 PM EDT. The Hurricane Center will be on the Hurricane Watch Net on 20 meters as well as the VoIP Hurricane Net,. The latter is a combination of IRLP and Echolink stations.

The Cayman Islands and Jamaica are the next locations in the path of this extremely dangerous Category V Hurricane which now has maximum sustained winds of 160 MPH per the latest advisory issued at 5 AM EDT Thursday morning.

VoIP Net Control Station Rob Macedo, KD1CY, says they are trying to coordinate with the IRLP node owners on the Cayman Islands and Jamaica on usage of their nodes and liaisons to those affected areas. Currently there are no Echolink or IRLP nodes in Cuba.

National Hurricane Center advisories indicate that the path of Hurricane Ivan is not clear after it passes over Cuba on Sunday. Residents in the affected area should monitor the situation closely. There is a possibility that the hurricane's forward progress could slow and emergency nets may be activated for an extended period of time. It also means that ham radio communications volunteers could have a lot more to do in the coming days. (CQ)

(5 sec pause here)

**

RESCUE RADIO: FIRST RESPONDERS SAY THEY NEED INTEROPERABILITY

Meantime, three years after the nine eleven terrorist attacks, thousands of police and fire divisions in cities and counties across the United States still

do not have coordinated communications capabilities. So says the First Response Coalition and Amateur Radio Newslines Norm Seeley, KI7UP, has the details:

--

The First Response Coalition calls this lack of interoperability an unresolved national crisis and it has decided to take on the FCC and big business to solve it. This as the organization reaches out directly to more than 43,000 local police and fire officials to solicit their help.

First Response wants Congress to overturn the FCC decision to award spectrum to Nextel in favor of a plan that deals both with interference problem and the interoperability crisis. Gene Stilp, who is the First Response Coalition coordinator says that the FCC plan involving Nextel is wrong for police officers and firefighters. This is because it only takes on only part of the interference issue. Moreover, it does not do anything about the lack of interoperability between emergency response groups.

The First Response Coalition says that this outreach program is getting a very favorable grassroots response. So far over 17 fire chiefs have joined ranks with the group in opposing the FCC's current plan for what they call a give away of taxpayer-owned spectrum.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

About the only emergency responders these days who have full two way radio interoperability are radio amateurs. Hams had voluntarily set world-wide communications standards many years ago. (First Response Coalition release)

**

RESCUE RADIO: AMBER ALERT LINKS UP TO THE WEB

The nation's Amber Alert system has become a web available tool. This, thanks to a portal made available by the E2C company of Scottsdale, Arizona.

Until now, Amber Alerts have been a primarily radio based technology. This meant that messages had depended on the nation's Emergency Alert system for relay and delivery. The new Web-based system can process and transmit the same emergency information more quickly and make it available to a wider variety of devices. It also comes with software that pinpoints the location of a child abduction and sends out emergency notification targeted to that geographic area.

As of now, Amber Alert managers in 11 states have access to the new portal. Use of the system is expected to expand to the 49 states that have statewide Amber Alert systems. Hawaii has no statewide system but has several local alert networks. (E2C)

**

THE BPL FIGHT: VK 4-WHEELERS JOIN BPL FIGHT

A Four Wheel Drive hobby group has joined the fight against BPL. Its happening down-under. WIA Newscaster Phil Waite ,VK2DKN, reports:

--

The VKS737 4WD HF Radio Network, joined the fight against BPL last week, following the recent WIA news broadcast by Jim Linton, VK3PC, highlighting the BPL industry's attack on interference protection for so called `recreational radio services' and an approach from WIA Director, Glen Dunstan, VK4DU.

VKS737 are currently circulating their members with information about the threat BPL poses to their activities, and encouraging their members to lobby politicians on the issue.

The VKS737 network is used extensively for emergency communications in remote areas, as well as serving the communications needs of outback travellers. Their current membership is around 7,000 and they potentially reach 250,000 Australian 4WD owners.

Many of their network base stations are in urban areas potentially affected by BPL and VKS737 members are rightly concerned about the threat presented to their HF communications. Their organisation is also associated with the Australian Citizens Emergency Radio network, who provide similar services on citizens band frequencies.

Phil Waite, VK2DKN, for the WIA National News.

--

The Wireless Institute of Australia is discussing ways the two organizations can assist each other in the fight against BPL. (WIA News)

INTRUDER WATCH: STRANGE SIGNALS AT 7238 KHZ

According to Bob Gonsett, W6VR, for the past three weeks, hams in the southwestern U.S. have been reporting a mysterious signal in the 40-meter band. One party described it as a "mechanical sound." Another speculated that it was "data."

Engineers at Communications General Corporation in Fallbrook California took a quick look at the situation on Septeember 6th. And at 3:20 P-M Pacific Daylight Savings Time the company found several close-spaced CW carriers. The four strongest signals at CGC's lab were on 7238.063, 7238.150, 7238.237 and 7238.412 kHz. The signal on .237 was the strongest of the group and the frequencies reported should each be accurate to better than plus or minus 30 Hz.

Communications General says it is not sure if the signal was coming from one specially modulated transmitter or from transmitters at different locations. Bob Gonsett adds that it will be interesting to learn the source or sources of these transmissions. (W6VR, CGC)

**

SAFETY: RADIO ENGINEER ELECTROCUTED WHILE WORKING ALONE AT TOWER SITE

The hazards of working near power lines has been brought front and center again. This with word that a Wyoming broadcast engineer has killed while working at a transmitter site in Colorado.

Thirty nine year old Robin Bradley Thomas was killed while working alone, trying to install a radio transmitter. The accident happened about 18 miles northwest of Red Feather Lakes in northern Colorado. Indications are that Thomas of Cheyenne died when he accidentally came in contact with high-voltage and was electrocuted. Thomas was described as an experienced engineer who contracted out his services. (CGC)

**

RADIO LAW: CELLPHONE PROVIDERS SUED OVER LOCKED PHONES

A consumer watchdog group sued three cellular telephone companies. This. for "locking" their phones to make it harder for customers to switch carriers.

The Foundation for Taxpayer and Consumer Rights is the group that filed the suit in Los Angeles. It accuses AT&T Wireless Services Inc., T-Mobile USA Inc. and Cingular Wireless, of using software in their handsets that prevents them from being used on a competitors' network.

All phones in question use Global System Mobile communications, or GSM technology which effectively limits a handset to a specific carrier using a non interchangeable SIM card. The lawsuit complains that this is an unfair and deceptive business practice under California state law.

The phone companies are defending their policy. They say that they routinely subsidize handset cost and would loose substantial revenue if they allowed customers to easily use those phones with another carrier. (Foundation for Taxpayer and Consumer Rights)

**

REPEATER COORDINATION: METROCOR MORITORIUM TO END DECEMBER 15

Attention repeater owners in the New York metro and surrounding area. An impoerant deadline is aproaching.

You may remember that your new area frequency coordinator MetroCor had put in place a two year moritorium on new co-channel coordinations when the group came into being. It had also asked existing repeater operators who have documented proof of expired coordination from the now defunct Tri State Amateur Repeater Council to update their coordinations with MetroCor.

In a posting to QRZ.com, MetroCor's Mario Sellitti, N2PVP, says that this moratorium had minimized the possibility that new coordinations might inadvertently displace longstanding users of the spectrum. It also helped to avoid creating disputes where none previously existed.

Now, says Sellitti, this period must now come to an end. He says that MetroCor will be terminating the moratorium as of midnight, Saturday, December 15th.

But he adds this qualifier. Sellitti says that anyone in the area having a repeater or knowing of one belonging to another ham, and that repeater qualifies for this exception, to please refer to MetroCor's on-line F-A-Q in item No. 11. This will give you or the person with the other machine the information needed to gain new coordination through MetroCor. Those in need will find it on-line at www.metrocor.net/faq.htm. (MetroCor, QRZ.com)

HAM TECHNOLOGY: HAM DREAM DIGITAL VOICE QSO

What is believed to be the first two-way digital voice contact in South Africa took place between ZS1AN and ZS1AU on August 10th. Contact was made on 15 meters with both amateurs using Ham Dream software for the QSO. Amateur Radio Newsline's Bruce Tennant, K6PZW has the details:

--

Ham Dream is an open-source version of the Digital Radio Mondiale broadcasting standard. It was adapted for amateur use by HB9TLK and gives hams the ability to talk almost noise free. Here’s how.

Speech is converted to digital data using a low-bitrate vocoder analog to digital converter. The data is then transmitted using a high-speed modem. At the receiving end the data is decoded to recover the audio at the receiver. Although still in the evelopment stages, there is worldwide interest in Digital Voice, which can deliver very high signal-to-noise ratios over medium quality narowband S-S-B channels.

For those who want to experiment, HamDream software can be downloaded free of charge from the South African Radio League's website at www.sarl.org.za.

For the Amateur Radio Newsline, Im Bruce Tennant, K6PZW, reporting.

--

Further information on digital voice in ham radio is available on HB9TLK's website. Its in cyberspace at www.qsl.net/hb9tlk (GB2RS)

**

EMERGING TECHNOLOGY: TiVO OVER THE NET

Federal regulators have approved technology allowing TiVo subscribers to send copies of recorded shows over the Internet. In its decision, the Federal Communications Commission said the new feature by Alviso, Calif.-based TiVo has enough protections in place to prevent mass distribution of copyrighted material.

The technology would allow a TiVo subscriber to download broadcasts to a computer and send copies of recorded shows over the Internet to an office or home or to a small circle of friends, as long as they are on the subscriber's registered account. The Motion Picture Association of America, the National Football League and others complained that the new service would allow the 1.6 million TiVo subscribers to redistribute shows over the Internet to virtually anyone, anywhere. (Published news reports)

**

EMERGING TECHNOLOGY: FCC TAKES NEXT STEPS TO PROMOTE DIGITAL TV TRANSITION

Its full speed ahead with the conversion to digital television. So says the FCC as it issues a Report and Order that it says implements several steps necessary for the "continued progress of the conversion of the nation's television broadcast system from analog technology to digital television.

The paper covers almost every aspect of the conversion process over the next several years. It also highlights the coming events and should be considered "must reading" for those interested or involved in the future of digital T-V. You will find it on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-250542A1.doc (CGC, FCC)

**

WORLDBEAT: NEW UK REPEATER SERVES LONDON AND KENT

And if you are planning a trip to the UK, don't forget your reciprocal license and your HT. And be sure to try out a new repeater serving the needs of hams in the North Kent and South East London England area.

Its call is GB3OK and it is sponsored by the Bromley Repeater Group and it went on the air on the 16th of August. It transmits on 145.650 MHz with the standard 600 Kilohertz input offset and requires a 103.5Hz tone to access the receiver. The trustee of GB3OK or repeater keeper as the British call them is Tony Ravelini, G1HIG, in the city of Kent. (GB2RS)

**

DX

In DX, HA3JB tells the Ohio Penn D-X Newsletter that he will operate as SU8BHI from Cairo, Egypt. This, from September 21st through December 20th. Activity will include CW, PSK, RTTY, SSTV and some SSB. QSL direct to HA3JB. (OPDX)

And UA9OBA, has been active as JT100M. This is a special callsign being used until September 13th during the Mongolian leg of the Altay-Himalaya Transasian off-road expedition. Activity has been mainly on 20 meters SSB around 14.180 Mhz. QSL via UA9OBA. (OPDX)

**

THAT FINAL ITEM: THA FINAL ITEM: A KEYLESS T-HUNT

And finally this week, a Michigan ham radio operator from the Ford Motor Company was part of a two man team that has solved the mystery of malfunctioning remote keyless car door openers, garage door openers and other such devices in Las Vegas, Nevada. A problem with R-K-E devices that had baffled many residents since a massive outage began last February.

Las Vegas resident Bill Zawistowski was one of those complaining. He and others vented their frustration to anyone who would listen including the FCC. Ford responded by flying in two R-F detectives. Earl Morse, N8SS, represented the auto maker and Nabil Hachem was from Alps Automotive, which makes the keyless car-door devices. And it did not take very long for Morse and Hachem to figure out what was happening:

--

Morse: "When we got there we discovered a signal in the paassband of the RKE receivers which was actually strong enough to keep the RKE from activating its own receiver in the vehicles. We investigated further and found it to be a stuck repeater. We can leave it at that."

--

Morse says it was not much different than a ham radio T-hunt except for the frequency:

--

Morse: “Having experienced Fox Hunting first hand. the only difficult art was shifting all my equipment to that frequency. All of my antennas were relatively useless because they were cut to 2 meters an 440 so we had to make some new antennas for the 315 Mhz. band.”

“We did have one advantage in that the RKE group had purchased a Doppler direction finder and we utilized that a lot.”

--

Morse tells Amateur Radio Newsline that once they found the transmitter it only took a few phone calls to get it turned off. The problem did surface again a week later but this time one landline call got it to go QRT for good. (ARNewsline (tm))

**

> a Franklin.

In deference to Steve who says the previous thread is dead, let me answer David's question about KDKA's "Franklin"....but only to say that KDKA's Franklin wasn't truly that. A Franklin radiator looks like two self-supporting towers, one inverted on top the other, fat ends touching. The one such that I remember (and I'd have to think that most of us have seen the picture) is WLW's tower that participated in the superpower experiments in the 30s. KDKA's radiator was simply described in the license as a center-fed vertical radiator, where the base impedance and input power was determined through quasi-indirect means at the input to the balun necessary to match the balanced feed point with the unbalanced transmission line (in years past, this stick was fed with balanced feed line, not unlike VHF twin lead on acid...hams know this feed line as "ladder" feedline, because of the characteristic cylindrical insulators placed at regular lengths along the conductors to maintain the correct separation between those conductors).

KDKA's antenna was fairly broadbanded, which if I remember correctly is a feature of center-fed radiators. But WLW's Franklin, because of the larger cross-section where current was higher, had a very nice, minimally-sloped reactance curve, and thus a very consistent, symmetrical impedance...if you ever heard WLW when they played music in the 70s, it really sounded great. KDKA's system had, of course, a ground system, to help pull down the skywave, but due to the fact that my manager (who shall go nameless to protect the embarassed) let the neighborhood kids ride their BMX motorcycles on the property (she thought that the presence of life on the transmitter grounds would deter vandalism), breaking a significant number of radials that were exposed by rutting after heavy rains dredged out the BMX paths, it didn't work all that well...on solar max periods, we'd often get fading well within our local metro coverage area because so much power went skyward and came back down, just slightly out-of-phase with the ground wave.

The antenna I had direct experience with was replaced in the mid 90s, but from what I've heard the only thing that was changed was the steel....the basic design was retained, and the counterpoise was repaired.

>IBOC, how can the man on the street be expected to know anything at all
>about it? And if the end user doesn't know anything at all about it, how can
>it make money for the station? And if it doesn't make money for the station,
>what good is it?

There's still a lot of serious controversy about IBOC. A station would
be foolish to promote it heavily until the bugs have been worked out
and they know it's going to fly. At this moment, nothing is certain
and interference could cause the FCC to shut some IBOC services down.

In my opinion, no good at all. In the opinion of those who stand to
make millions with the technology, it's God's gift to radio.

Rich

Good to see some people with sense are finally coming around here.

# 2304. Re: WFAN power reduction

tad
> less).

----------

Most 50 kW AM stations in the US are using a Harris DX series transmitter,
and it is about 86% efficient -- 58 kW AC input at 50 kW carrier.

Even with 100% sine wave modulation it consumes 'only' about 87 kW from the
AC line. Power consumption during normal programming is less than that.

RF

# 2305. List of the world's shortwave relay stations (from HFCC)

# 2306. For sale: Partial interest in AM daytimer in small Alabama city.

Newsgroup: rec.radio.broadcasting
Date: 2004-09-12 17:59:59 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <ci22qv$1qs$1@xuxa.iecc.com>
Source record: 4051

(The "Radio Crazy" is baaaaaakkkkk!!)

For sale: Partial interest in AM daytimer in small Alabama city. 1 KW, high dial spot, non-directional. Sunrise to sunset. That is it. Not one watt at night!

NO real estate is included, kiddies! Asking price is only $60,000 cash or $75,000 on terms with seller financing.

This is a joint venture and you could lose all or part of your investment since there is an element of risk.

I am NOT a shill, broker, agent, owner, part-owner or employee of the station.

Active or inactive investors with at least $5,000.00 (Five grand) each are welcome. All investors would be on the board with full voting rights, if desired. No individual can own over 49 percent. We want no bullies. This applies to me too!

Call letters and city of license will be disclosed to those showing more interest. Call or email, please.

Tel: (478)741-1710 in Macon, GA

Please, no "AM bashers" or other negative nabobs!

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"

# 2307. Re: Franklin antennas (was: Re: Is AM Radio Harmful?)

Newsgroup: rec.radio.broadcasting
Date: 2004-09-12 18:00:01 UTC
From: peterh5322@aol.comminch
Message-ID: <ci22r1$1ru$1@xuxa.iecc.com>
Source record: 4054

>>
A Franklin radiator looks like two self-supporting towers, one inverted on top the other, fat ends touching.
>>

Nope.

A Franklin is defined as a center-fed sectional, which is 180 degrees over 180 degrees. The base of the bottom section is connected to the ground system by an impedance, usually a capacitor.

KSTP's Franklin is not a Frankin on account it is 179 degrees over 179 degrees.

A true Franklin has an efficiency of 510 mV/m/kW at 1 km.

KSTP's certainly equals that, although it is classified by the FCC as a conventional sectional.

KDKA's sectional is just that.

As was WOAI's. 120 degrees over 120 degrees.

WHO's radiator isn't a Franklin, either, it is a "WHO Type", and is so classified by the FCC. It is 300 degrees tall.

A true Franklin has the best horizontal field of any radiator.

A WHO-type radiator probably has the best anti-fading performance of any radiator.

# 2308. Re: Too much clutter on radio

With all the off topic cross posting you have done most people think you
are an idiot and have you in their kill files. Try sticking to one group.

They should shut it all down, but won't, because

> In the opinion of those who stand to
>make millions with the technology, it's God's gift to radio.

At today's FCC, sound engineering practice is irrelevant. Only money
talks.

# 2311. BO DIDDLEY BBC radio special

Newsgroup: rec.radio.broadcasting
Date: 2004-09-12 18:00:04 UTC
From: daelyn1@eudoramail.com
Message-ID: <ci22r4$1t7$1@xuxa.iecc.com>
Source record: 4056

Hey BO DIDDLEY fans,

An exclusive interview recorded with BO DIDDLEY in London, England in August 2004 is due to be broadcast as part of a one-hour BO DIDDLEY special on the Paul Jones rhythm & blues show on British Broadcasting Corporation (BBC) Radio 2 on Thursday September 16th 2004 commencing at 8.00pm BST.

The Paul Jones show is available on-line to listeners around the world via the BBC Radio Player's "Listen Live" and "Listen Again" functions located at http://www.bbc.co.uk/radio2/shows/jones

David Blakey, Webmaster,
BO DIDDLEY-The Originator
http://members.tripod.com/~Originator_2/index.html
A Celebration of his unique contribution to Popular Music.
1954-55 to 2004-05 - Celebrating 50 Years of The Bo Diddley Beat!

## 2312. Re: WFAN power reduction

>>
Even with 100% sine wave modulation it consumes 'only' about 87 kW from the AC line. Power consumption during normal programming is less than that.
>>

Indeed ... hence the not insignificant popularity of the DX-50 or 3DX-50.

IMO, the Nautel sounds better.

I would go with the SAS Rubicon. Of course this is only from seeing it on the NAB floor last spring. I've heard stories both positive and negative on the Klotz.

Sorry I am of no help here.

Later,

I.

It's easy to see if you follow the news regularly that the above is a
trend in all kinds of businesses. In many it leads to constant
"restructuring" (layoffs) to eek out a bit more profit, even though the
company is thriving without the restructuring. Our masters have lost all
sense that they need to keep their greed in some kind of check.

# 2317. New transmitters for the BBC

Newsgroup: rec.radio.broadcasting
Date: 2004-09-12 18:07:45 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <ci239h$4h7$1@xuxa.iecc.com>
Source record: 4057
Cross-posted to: rec.radio.broadcasting,uk.radio

press release date: 3 September 2004
ref: 214

http://www.ukdigitalradio.com/press/display.asp?id=214

The BBC is continuing to roll out its national digital radio network, in a bid to reach 85% population coverage.
Here's a list of transmitters that have recently been switched on.

Beacon Hill - Torbay and Devon
Bincombe - South Dorset area
Charing Hill* - Sittingbourne and Faversham
Danbury - Chelmsford area
Darvel - Ayrshire area
Durris - Aberdeen area
Keighley - Aire Valley and West Yorkshire area
Kirkton Mailer - Perth area
Lancaster - Lancaster and Morecambe area
Madingley - Cambridge area
Meldrum* - Peterhead area
Morecambe Bay - Barrow in Furness area
Mounteagle - Inverness area
Pendle Forest - Burnley and Colne Valley area
Purdown - Bristol area
Ridge Hill - Herefordshire area
Stockland Hill - East Devon, Somerset and Dorset
Wickhambrook* - Saffron Walden area

The national commercial digital radio network also broadcasts from all of the above transmitters, except for those marked with a star*.

Listeners in these regions who want to receive the additional stations should rescan or auto-tune their DAB digital radios.

So it is asymmetric, with the two sections slightly different lengths, or the
base capacitor is used to compensate for that?

If it were in free air, it would simply be a vertical dipole, but since the
ground is below it, the electrical lengths of the bottom leg is changed,
right?

>KSTP's Franklin is not a Frankin on account it is 179 degrees over 179 degrees.

What does this do to the pattern in real terms?

I think there are a couple. New Hampshire (WFEA?), WSM, WLW, and the WBT
installation. WADO took theirs down when the new 50 kw DA was built 3-4
years ago.

>>
If it were in free air, it would simply be a vertical dipole, but since the ground is below it, the electrical lengths of the bottom leg is changed, right?
>>

It's not a dipole over a perfectly reflecting earth because: 1) the top section is series excited from the center of the coax feed line through a network, 2) the outer cover of the coax feed line is directly connected to the top of the bottom section, and 3) the bottom of the bottom section is connected to the ground system through another network, usually just a capacitor.

This results in the current distribution being changed such that: 1) the horizontal field is greatly increased over that of a 180 degree radiator, and 2) the vertical field is greatly reduced over that of a radiator which is taller than 180 degrees.

Ordinarily, a 225 degree radiator has the maximum horizontal field, but such a radiator also has a very significant vertical field ... significant enough to cause loss of primary service area due to the reflected vertical field being approximately equal to, but of opposite polarity to the horzontal field at its extremes.

Hence, 200 degrees is normally the tallest conventional vertical radiator used for Class A stations.

And, Class A stations which use an unsectionalized radiator taller than 200 degrees do so at their peril.

(There are only two such cases within the U.S., and I don't know of any outside of the U.S.).

>>
> KSTP's Franklin is not a Frankin on account it is 179
> degrees over 179 degrees.

What does this do to the pattern in real terms?
>>

Nothing, which is why I also stated that a true Franklin and a Franklin-type sectional which is just a tad shorter than a true Franklin (the KSTP day radiator case) BOTH have an efficiency of 510 mV/m/kW at 1 km.

I came across one site of Philly Boss Jock info that say Rose (who I'm
sure you knew was at one time a Philly boss jock) is retired and
living in Concord, CA.

# 2330. FCC raids KFAR, pirate radio station

Newsgroup: rec.radio.broadcasting
Date: 2004-09-16 04:24:10 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cib4ha$4qk$1@xuxa.iecc.com>
Source record: 4074
Cross-posted to: alt.pirate.radio,alt.radio.pirate,rec.radio.broadcasting

By Wayne Bledsoe, bledsoe@knews.com
September 15, 2004

Federal Communications Commission agents, along with U.S. marshals, raided pirate radio station KFAR this morning.

The agents shut down the station in Vestal about 10:30 a.m. and began confiscating all of the 2-year-old station's equipment.

KFAR (Knoxville First Amendment Radio) has no broadcasting license or any official management. Until last February the station's antenna was mounted in the top of a tree.

The station, which broadcasts on 90.9 FM and was heard across much of Knox County, had been visited twice by agents from the Federal Communications Commission, and DJs had been told to stop broadcasting.

They complied - for a while - but then returned to the air more determined than ever.

Three FCC agents silenced the station's broadcast signal while three marshals stood by.

KFAR posted a raid alert on its Web site when the agents arrived.

None of the dee-jays give their names to avoid fines.

In addition to possible fines being levied at an individual, any person found to have been broadcasting illegally is automatically barred from ever being granted a broadcasting license.

KFAR has few rules: No racist, sexist or homophobic language, and do not offend community standards before 10 p.m.

The station's lineup includes shows that feature many different styles of music and shows sponsored by various left-wing political and social groups. Cricket points out that there are at least two DJs who play Christian music and at least one who plays anti-abortion songs.

# 2331. Ireland - North West Radio to close

Newsgroup: rec.radio.broadcasting
Date: 2004-09-16 04:24:11 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cib4hb$4qo$1@xuxa.iecc.com>
Source record: 4076
Cross-posted to: alt.pirate.radio,rec.radio.broadcasting,uk.radio

By Gerry McLaughlin

North West Radio has announced it will stop broadcasting on October 1.

But the station is to continue with its Supreme Court action against the BCI.

And until this legal action is resolved incoming station Ocean FM cannot go on air.

The end of the road came following a board meeting on Friday in Sligo when it was decided that the station would cease broadcasting on the last day of its current licence which expires on September 30.

The meeting also decided that the station will still go ahead with a Supreme Court appeal against the Broadcasting Commission of Ireland's decision to take away its licence.

The appeal has been listed for mention in the Supreme Court on October 8.

The station has already lost a High Court application for a judicial review against the BCI's decision.

This means that Ocean FM will not be able to begin operating until this appeal has either been heard or withdrawn.

If North West go ahead with their appeal then it could take until the end of October to reach a conclusion.

The BCI will not sign a contract with Ocean FM while court proceedings are pending.

When contacted yesterday evening (Monday), a North West Radio staff member said he was not aware of their board's decision to go off air.

It is understood that redundancy talks have not yet taken place between management and staff.

Meanwhile, Ocean FM station manager Robert Walsh said they are going ahead with preparations to go on air on October 1. He said: What NWR says is of none of my business. But it is my business to ensure we are ready to go on air on October 1 and we are now busy with training of staff. And we are four days ahead of schedule with this training".

The decision by NWR to quit marks the end of almost 14 years broadcasting in the region.

North West Radio began operating from the Market Yard in Sligo on Friday November 2, 1990.

This was exactly 12 months after the pirate stations closed down in Sligo. And this was 13 months after Rosses Regional Radio won the original franchise.

This grouping which included the Sligo Champion and the Leitrim Observer handed the license back because they felt it was not profitable.

When this happened, NWR stepped in and launched Sligo's first legal local radio station.

Most of the station's first shows like Ita McMorrow's "Airs and Affairs" and Adrian Eames "Drivetime" have passed into history.

But others' like Tommy Marren's morning show are still an intrinsic part of the station's programming, attracting tens of thousands of listeners every morning.

Meanwhile, Ocean FM station manager Robert Walsh said they are going ahead with preparations to go on air on October 1. He said: What NWR says is of none of my business. But it is my business to ensure we are ready to go on air on October 1 and we are now busy with training of staff. And we are four days ahead of schedule with this training".

Monday September 13th 2004

Paul Billingham reporting:

http://www.offshoreradio.de/

I wondered if you could mention our Radio Sutch RSL which we hope will be on air this time next year. I have canvassed one or two people who knew Screaming Lord Sutch, and one chap who actually helped with transmissions from the Shivering Sands army fort in 1964. But we need more enthusiastic folks to join in!. We will be discussing this event at the Official Monster Raving Loony Party conference which is being held on the 1st to the 3rd of October at the Dog and Partridge pub at Yately Hampshire.

We have kindly been given permission to broadcast from the Red Sands Fort complex by Project Redsands, who have just had these forts surveyed. They have a lot of work to do to make access to these forts safe and practicable, but huge heavy equipment is not needed these days anyway. We would welcome aboard anyone who has an interest in early offshore broadcasting whether they can man turntables, fuel a generator, rig an arial or are interested in any way. We want this broadcast to be a tribute to David Sutch, as well as a lot of fun for the listeners and those involved in making it work.

We hope to transmit on AM, which given a good antenna and the almost perfect transmitter site on the control tower should reach a wide area as well as much of London. We intend to play a lot of Rock and Roll, have readings from filthy novels, and include speciality acts such as jugglers, ventriloquists and possibly cookery programmes as well (we are monster raving loonies outside of elections as well).

Any interested parties can reach me at melaniespar@aol.com, or phone me on 07766164976.

## 2334. XM Satellite Radio going online

# 2336. DAB EPG demonstrated at IBC

Newsgroup: rec.radio.broadcasting
Date: 2004-09-16 04:24:15 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cib4hf$4rp$1@xuxa.iecc.com>
Source record: 4072
Cross-posted to: rec.radio.broadcasting,rec.radio.shortwave

Ensigma - a division of Imagination Technologies - is demonstrating Electronic Programme Guide (EPG) support for DAB digital radios at the International Broadcasting Convention (IBC) in Amsterdam.

Ensigma's EPG receiver and front-end software enables users to browse programmes for a single station or all programmes on at a particular time, and to select them for scheduled listening or recording to SD memory card. The EPG is being demonstrated on the advanced Bug DAB digital radio from PURE Digital, which is already widely commercially available.

Says David McBrien, VP Business Development, Imagination Technologies:

"The EPG enables radio listeners to search the listings of digital stations they receive, then select a programme, or set a reminder up to seven days in advance. It brings the functionality we now take for granted in digital television broadcast to DAB digital radio and is set to permanently change the way listeners interact with their radios."

Both Ensigma and PURE Digital have been actively involved in the WorldDAB EPG TaskForce's development of a new open standard EPG. Field trials have been in progress in the UK and Canada over the last few months and broadcasts of the new EPG format will be on air from Q4 2004. PURE Digital is expected to have the first EPG-enabled consumer products, starting with a software update for The Bug by the end of 2004. The USB-enabled Bug radio can be upgraded with new functionality by the user using software downloaded from PURE's website.

IBC is the world's leading event for professionals involved in the creation, management and delivery of entertainment content and will take place at the Amsterdam RAI from 10 - 14 September 2004.

Existing subscribers to the radio service will have to pony up another $3.99/month to get the Internet service.

Also, although it hasn't been posted on the corporate Web site yet, word on the generally reliable fan site xmfan.com is that XM will be returning at least one of the channels it has dropped over the past year as an Internet-only offering. The channel being mentioned is Special X, whose format was generally described as "weirdness" -- polkas, William Shatner singing, old Mrs. Miller records, foreign language stuff that sounds "bizarre, man" to you average stoner college sophomore. XM dropped it back in February, saying its surveys showed a negligible audience. Apparently, XM now sees that negligible audience as a potential ... well, not cash cow, more of a cash heifer, devoted fans who'll pay to hear what they once got as part of their basic subscription.

# 2338. Who Was Pirate Radio DJ Dave Rabbit?

Newsgroup: rec.radio.broadcasting
Date: 2004-09-18 04:34:01 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cigdrp$d87$1@xuxa.iecc.com>
Source record: 4077
Cross-posted to: alt.pirate.radio,alt.radio.pirate,rec.radio.broadcasting

Radio Urban Legend? Hoax? Hero?

The story about Dave Rabbit goes something like this: he was an Air Force sergeant who stayed behind in South Vietnam after serving a one-year hitch in the military. Apparently, he operated a pirate Radio station in 1971 and broadcast a show called "Radio First Termer" for the purpose of serving U.S. service men and women during the end of the Vietnam War.

Rabbit aimed his broadcasts at English-speaking personnel in South Vietnam and presented an anti-war stance as an alternative to AFVN. He was known to be pretty raunchy and played what was then referred to as "Acid Rock" music.

Dave Rabbit's real identity has never been established. Some of the people who have been suggested to have been Rabbit include:
Roger Abbett (known as Rabbett) who runs "Internet Radio Hawaii", although he denies it.

Radio talk show host, Art Bell, because it is known he operated a Pirate Radio station on Amarillo Air Force base. But that connection is somewhat flimsly.

TV host Pat Sajak, who was a Disc-Jockey for the military in Vietnam during the war. Again, this is most likely wild speculation, especially since Sajak was a legitimate military broadcaster.

Not much else is really known about Dave Rabbit except he had an assistant named Pete Sadler, who probably doubled as an engineer and a female named "New Gin", helped out.

Dave Rabbit broadcasted at 69 MHZ on the FM frequency.

As the third major hurricane in two months crossed the Caribbean Sea, radio amateurs in the region have once again been in action, providing emergency communications. The Hurricane Watch Net has been in almost continuous operation on 14325kHz for over three weeks. It coordinates its activities with WX4NHC at the American National Hurricane Centre, which gathers real-time weather data and damage reports from radio amateurs in the path of the hurricane.

In Cuba, IARU Region 2 Emergency Coordinator Arnie Coro, CO2KK, praised the Hurricane Watch Net for its outstanding efforts in collecting ground-level weather data from stations in Cuba. CO2KK was the Hurricane Watch Net liaison station. He and many other Cuban amateurs were active in providing communications as Hurricane Ivan passed over the north-western end of the island. Arnie said that nearly 800 Cuban amateurs were involved in handling emergency traffic related to Hurricane Ivan. He spent some 55 hours in continuous operation handling emergency traffic to the affected area.

In the Cayman Islands, HMS Richmond was moored off Grand Cayman but had no communications to shore to direct its humanitarian relief efforts. A member of the Hurricane Watch Net called London to get a satellite telephone number for the governor of the Cayman Islands, which was relayed to the Richmond via the net. The Hurricane Watch Net was also able to advise the Richmond that it was possible to land an aircraft on the Grand Cayman airport runway. It had been assumed the runway was unusable until the net learned from a private pilot that it was still possible to land there.

As Hurricane Ivan threatens the US Gulf Coast, the Amateur Radio Emergency Service there is being placed on standby alert. Local Emergency Coordinators are establishing VHF and UHF repeater nets and monitoring the emergency frequencies of 3965 and 7243kHz.

A longer version of this news story is available on the ARRL website.

From: wshoots1@aol.com
Message-ID: <cigdrt$d8g$1@xuxa.iecc.com>
Source record: 4083

It finally happened. Houston's only commercial classical music station, KRTS 92.1, is dark. Well, not exactly. It is now KROI, with a format of the worst music of the Nam era -- the whiny, twangy crap.

Strange, though. The FCC's data base still shows KRTS on 92.1 with the owner as KRTS, LP. KROI is shown as unassigned.

I recall that Clear Cut was to buy this station.

This station in Seabrook, TX, southeast of Houston, had changed formats and call signs several times in its 25-30 year life, but KRTS with classical music had lasted for at least ten years.

An NPR station is now the only classical music station in the Houston area.

Message-ID: <cigdrv$d8q$1@xuxa.iecc.com>
Source record: 4085
Cross-posted to: rec.radio.broadcasting,rec.radio.shortwave,uk.radio

The MSF 60kHz Time and Frequency signal broadcast from the BT Rugby radio station ( http://www.npl.co.uk/time/ ) will be closed down from 9.00am on Monday 20 September 2004 until 9.00am on 4 October. The interruption to the transmissions is required to allow maintenance work to be carried out in safety. The service will be restored overnight whenever possible, but this will not always be feasible as extensive work is required on the aerial masts.

The MSF transmitter has an estimated equivalent monopole radiated power (EMRP) of 15kW and the horizontal radiation pattern is substantially omni-directional. The signal provides a field strength exceeding 100 microvolts/metre throughout the UK, and it can be satisfactorily received throughout much of north and west Europe.

Even is the aerial is bad, it does not matter, because the ERP is the
licensed value, so a bad aerial can be used with more transmitter power :-)

There's a longer version?! It already set a record for a press release.
I gather somebody wants to take the frequencies away. Jeez, talk about
pointless self-importance. You could get even better emergency communications
by putting up more cell phone towers and not have to suffer through the
press release.

Look for a ``Car-jackers Handle Emergency Transportation'' release from
civil rights organizatons.

Yes really sad.
Lived in Houston for nearly 40 years now,..., for the 4th largest city
in the U.S. this town has the worst radio line up on AM or FM.
On FM except for KUHT , the Pacifica station and a little Jazz
station, all the rest is cookie cutter clones.
On the AM dial there are only two large stations, and one of them is
'reactionary radio', lord! I don't see how they keep their advertising
base with endless elaboration of closed box thinking!

The FCC is notoriously slow to update its on-line database.

>
>I recall that Clear Cut was to buy this station.

The station was purchased by Radio One, not Clear Channel. As
reported in Radio & Records, the new KROI, which joins CHR/Rhythmic
KBXX and Urban AC KMJQ in Houston in Radio One's Houston cluster, will
go head-to-head against Clear Channel's crosstown Hot AC KHMX (Mix
96.5).

That, or that's all he'll admit to in public. "What? My transmitter was set to 1kW? It wasn't supposed to be, although that explains why my electric bill has been so high!"

(No aspersions or accusations intended to Rev Chrysafis...for all I know, he's okay. But I'd bet that's been a frequent defence for those with less than honourable intentions.....while the transmitter room has dud 4CX5000s sitting around. Not that ignorance of radiated power output is a workable defence when it's apparent that measures were taken to maximise that output, for the sake of a workable coverage area.)

I agree with you, Al. And thanks to David and, especially, Mark for the details.

There are two jazz stations in the Houston market. My favotire is KTSU, a university station on 90.0. It has cool jazz and blues, among other things.

The other is KHJZ, smooth jazz (which I don't care as much for) on 95.7. They really bug me with their constant cutsie imaging --The Wa-a-ave, even between selections in the alleged sets.

I like the Sunday jazz brunch on Clear Channel's Sunny 99 (99.1). I don't recall ever hearing its call letters. I guess I'll look 'em up in the FCC data base. It does play better rock classics than KROI does.

I'd listen to big band KBME on 790 AM, except its signal is weak where I live. Too, it has many more commercials since the production group got tossed from its format-changed FM home.

(I'm listening to New Age music on KUHF right now. <G>)

Their work is thankless, and a little overblown press once and awhile is
about as bad as that gets. What's really aggravating, is to hear the vermin
crawl out of their holes and whistle and otherwise deliberately disrupt
emergency communications on the HWN and Maritime Mobile Net. Some Amateur
operators in spanish and asian languages (one group allegedly operates
within Florida) deliberately acts up on 14323 whenever the net is active on
14325.

From: dtube@myrealbox.com
Message-ID: <cik9h0$3a1$1@xuxa.iecc.com>
Source record: 4098

Hi Larry,

Audioarts make a great console IMO. I am installing a D7012 right now and am still impressed with it (given a better budget though, I'd take an actual Wheatstone everytime). Speaking directly to the D16 - do you have more sources than input channels on the console? This board offers some amazing operational flexibility, but loses maintenance-friendly modular inputs in the process (it appears to have a unified faceplate). If you are not overwhelmed with sources or require remapping your I/O (i.e. don't need a router), then I'd reccomend adding $1500 to the price and going to the D70 which offers much more I/O flexibility and modular channel strips. Or, you could spend lots more and get an actual router and a console that is merely a control surface. Ultimately, that is the most future-proof solution IMO.

-Darren

P.S. I believe that Steve at RPC has mentioned your project to me. So, greetings from 70-miles north...

Wake up kiddies!

Even 1/10 watt FM is "pirate" radio! The FCC does not
permit this "much" power! Perhaps 1/100 of a watt is
more like it to get the max. allowable field
intensity.

If you run 1/10 watt into an efficient antenna, be
ASSURED you are breaking the law!

I am former Chief Engineer for a 100,000 watt ERP FM
in Houston so I know what I am talking about.

73,

Meyer Gottesman, W6GIV
aka the infamous "Radio Crazy".

Actually, my response to his signature line was only met tongue in cheek.

He stated, 100,000 microwatts, which is only 1/10th watt.

I thought you had to be running respectable power, either 10 or 100 watts to qualify as pirate radio. In fact, 1/10th watt doesn't even require a license in the FM band.

CBS can't "loose" (sic) its broadcast license because it doesn't have one.
The individual stations owned by Viacom do have licenses, but the network
really answers to noone. It only provides programming to its affiliate
stations...therefore, nothing to "loose" (sic).

CBS doesn't have "a" broadcasting license to "loose". They do own a
number of stations, though, that have licenses. I doubt a journalistic
mistake like this would cause someone to lose their license. Their
audience, perhaps.

In a word: no.

Nor will Dan Rather be fired. Some underling will take the blame and get
fired instead.

It will otherwise blow over. Being liberal means never having to say that
you're sorry (or admit being wrong).

Hello,

Does anyone have a / use a / listened to / a Cambridge Soundworks
CD740 Radio. I have a poor AM/FM Band Radio signal level location
that is up in the hills and down in a valley. The current Kitchen
Radio is a Sony AM/FM/CD/Cassette Radio that has very poor AM/FM
Reception. I would like to replace it with a Quality Sounding
AM/FM/CD Radio that has a good tuner for improved reception and
it must have a CD Player.

NOTE: The Cambridge Soundworks CD740 is listed as having separate
AM/MW 'external Antenna Input and a FM 'external Antenna Input.
CSW-CD740=> http://tinyurl.com/riym

CBS per se of course does not have a "broadcasting license". They
don't broadcast ... just produce shows.

They do own stations that need a license, of course.

And of course those stations will not lose their licenses.

The only way to lose a license is to frequently
use the works "fuck shit piss cunt tit cock " etc., on the air,
to show naked people, or to flagrantly and repeatedly run
at a higher power than authorized. It is exceedingly difficult
to lose a license.

There is one and only one way to easily lose a license,
and that is to get caught lying on an application.

On what basis would thier license be revoked? If getting the facts wrong in a news story where an offense (which it's not), I think every network in the world would be found guilty at one time or another. Should the networks which broadcast the Swift Boat Veteran's lies and fabrications be found guilty?

conscience:
> Will the US CBS Network loose its broadcasting license over the Dan
> Rather row?

I don't think CBS would loose their license, but they'll have hell to pay
from parent company Viacom. I'm hoping they get spanked royally by

1) removing the CBS network
2) move UPN to CBS affiliates (making them UPN affiliates) folding the
programming from CBS into the new UPN
3) former UPN stations run first-run syndicated programming from Viacom*

*Star Trek - The Next Generation from Paramount existed in first-run
syndication and got good numbers

But that's just IMHO, YMMV. ;-)

I seriously doubt it. Rather was set to "retire" in about 6 months,
and at this point, it still looks like these documents were cut &
pasted together. His "leading the witness" tacts with the 87 year old
typist was disgraceful. Many of his peers are giving him a mulligan
and won't really touch the (real) story... that Rather himself is a
staunch Democrat and party fund-raiser. This campaign has turned into
a discgraceful mud-slinging contest and frankly... it started with the
Democrats and they're spending $65 million in hard-line anti-Bush
stuff like comparing him to Hitler.

If you caught the show last night on TV that was highlighting the
"Iraq Oil for Dollars" card that many of our "allies" were playing in
the UN, then you know why, with billions in graft lost when we
invaded, they are reluctant to support the US.

This war sucks, but sooner or later it had to happen because everyone
was too willing to look the other way while Sadam was raking in money
left and right and looking to rebuild his military strength.

It doesn't have a license to lose. Networks don't require licenses in
the U.S..

The stations that air CBS network programs do require licenses and are
subject to sanction. Some of these stations are owned by the CBS
network - the majority aren't.

It's highly unlikely any of the stations will be sanctioned either.
There's no evidence CBS knew the documents were fake before they were
aired - indeed, there is evidence that they *weren't* fake - and even if
they knew the documents were fake that hasn't been grounds for FCC
sanction in the past.

Really? I thought we invaded because he was an imminent threat to the United States and was involved in 9/11. Turns out neither was true. Now, Iran and Korea certainly are developing weapons of mass destruction. When's the invasion? Oh, I forgot again. We only invade third rate contries that have no real army or defense. It's like looking for your lost car keys 50 feet away under a street light because the light's better there then where you really lost them.

We are trying to decide on new processing. We are replacing an aging 8100/xt combo. We are trying to keep the price to around 7000.00 max. I have had the opportunity to play with a couple different boxes the past few days. The boxes are an 8200 SIG, and an Aphex 2020 MK III. I was suprised by the results. I was a little skeptical about trying the Aphex box. I always heard about Compellors and Dominators, but there never seemed to be a lot of "jumping up and down" about the 2020. I've come to find out that the original 2020 left a lot on the table as far as loudness is concerned. I've gotta tell you the 2020 MK III is a very sweet sounding box and loud. Compared to the 8200 the 2020 sounds very very clean and punchy. The high end on the 8200 sounds kinda gritty. The high end on the 2020 sounds very smooth and crisp. Makes me wonder why people aren't buying up MK III's. I did notice the AGC section on the 8200 can be pushed much more aggressively than the 2020. 20db sec release time on the 8200 compared to about 5db sec on the 2020. I could never imagine using something that agrressive though, especially in an AGC section. ANYWAY HERE'S MY QUESTION. Is the sound I'm hearing from the 8200 typical from digital boxes or just from the 8200. I've read that the 8200 is a love hate type thing, but always figured it had to be pretty good to sell as well as it did. I've gotta be honest, I'd take a 8100/xt combo or the 2020 anyday over that box. Which brings me back to my question. Does analog always sound much sweeter than digital? I'm thinking of demoing an 8300. How does the 8300 sound in comparison to the 8200? I'm guessing it probably sounds completely different. Does it have a "sweeter" sound or does it also have a rather "numerical" sound also? How do the Omnia's stack up against the Orban digital boxes? Who knows we may end up buying an Aphex box, but I've been an Orban fan for about 26 years.

Thanks for your time,

Travis

I know of one station that operated on an unauthorized frequency, from an unauthorized site, with an unauthorized pattern and power, and significantly interfered with a major station for more that a year. Complaints to the FCC did no good.

Eventually the FCC told them to stop, pay a modest fine, and they were eventually licensed on the new frequency after really building the authorized facilities.

As Doug says, it's hard to lose a license.

The only case of a lost license in my area was a case of obvious lying to the FCC. That was close to 20 years ago.

I know of two... WRHC in Miami (Coral Gables) and 106.5 in Culebra, PR,
which was reassigned to 98.9 but built and ran on 106.5 anyway.

I was recently on a cross country car trip and did some extended listening to Delilah.

I hadn't heard her in a while.

She was talking to a caller who was praising her "wonderful advice", and said to the caller: "If I'm so good at giving advice, why don't I have a spouse?"

Now, I remember when Delilah was just starting out in syndication, she had just gotten married. (She had been married previously in an abusive relationship, which she always shared with listeners.)

Anyone have a clue what happenned to husband #2?

Thanks

Curious listener

Since I don't recall using that term I'll assume I'm not the Rich to whom you refer. To answer the question: no.

Not being paid could mean a lot of things, depending on his contractual arrangements. Is he an employee or independent contractor. Is he paid a salary plus a share of revenue or just revenue? It could be that there wasn't any revenue. Unfortunately, that's happened to many people in syndication where they couldn't meet ad agency requirements of 85% national coverage.

Most small networks are packaged with others and the revenue split among them.

Rich

If you'd been following the story, the source, Burkett, was the one responsible for
the misrepresentation, as he claimed that he was "pressured" into providing the name
of the source, for the purposes of determining provenance for the documents in
question. This is appropriate journalistic practice. While CBS does hold some
responsibility for failing to fully prove that Burkett's claims were true, the fault
for the hoax lies fully with Burkett, who could have easily told the truth about the
documents' source. Holding Rather and CBS solely responsible for this fiasco is like
me holding you responsible for the lies we've been told by the Bush Administration.

But then, I do.

Source record: 4048

For Immediate Release
Contact: Lorie Kellogg (845) 647-9475
lorie@waterlogg.com

AL FRANKEN AND BOB EDWARDS TO APPEAR ON "THE COMEDY-O-RAMA ELECTION SPECIAL"

TUESDAY, NOV. 2 FROM 6:00 • 8:00 AM, 2:00 • 4:00 PM, AND 10:00 PM - MIDNIGHT
SATURDAY, NOV. 6 FROM 7:00 - 8:00 am and 7:00 - 8:00 pm (ALL TIMES EASTERN)

ON XM SATILLITE RADIO'S SONIC THEATER CHANNEL 163

September 21, 2004, Napanoch, NY • Spend this Election Day• LAUGHING when satirist and radio talk show host AL FRANKEN and veteran public radio host BOB EDWARDS portray themselves on "THE COMEDY-O-RAMA ELECTION SPECIAL". The two-hour special begins with HOMELAND SECURITY COMES TO CAMP WATERLOGG", which producer JOE BEVILACQUA calls "hybrid radio" (equals parts radio theater, satirical sketch comedy, improvisation and interview), and concludes with a set of DAWS BUTLER stories. The special airs multiple times beginning November 2, on XM SATILLITE RADIO'S SONIC THEATER CHANNEL 163.

"We're trying to have a little fun, something for which today's radio is not exactly known," explains Bevilacqua, who was a prot•g• of Daws Butler (the voice of Yogi Bear), provides many of the voices on the series, and has been writing, producing and performing radio comedy since 1979. He likens his work to the modern equivalent of Fred Allen, Jack Benny and Fibber McGee and Molly. "In 1930s and •40s, these show weren't just funny. They created entire imaginary worlds that tickled the imagination," notes Bevilacqua.

Radio listeners will spend the first hour with Ranger Joe and Ranger Lorie at their dilapidated Catskills kids camp, "Camp Waterlogg," located in the bucolic woods of Napanoch, New York. While Ranger Joe is off talking with Al Franken, Ranger Lorie must contend with a wacky cabal of nutcases (mostly played by Bevilacqua), the day before the Presidential Election. Meanwhile, Bob Edwards reports on the events occurring at the fictional camp. (This is the second "Camp Waterlogg" story; the first was a Fourth of July special. More are planned.) On Election Day only, a second hour will the best of "What the Butler Wrote: Scenes from the Daws Butler Workshop".

For Al Franken, (whose AIR AMERICA radio show airs from noon to 3 pm Eastern time, on XM Satellite Radio's America Left Channel 167) appearing on the show was a no-brainer. After all, "the only thing more liberal with comedy than me is ﷿THE COMEDY-O-RAMA HOUR'," explains the Saturday Night Live alumnus.

Bob Edwards says he is thrilled to be on Election Day special and reminds listeners that it is their "patriotic duty to laugh!" When introducing his own new talk show (which premieres October 4, on the XM Public Radio Channel 133), Edwards beamed, "XM is the most exciting thing happening in radio. I think XM is reviving and reinventing radio. It's something entirely new, and at the same time it brings radio back to its past glory."

In addition to Franken and Edwards, the special will feature some of the best new political humor in the country, from The New Liquid Comedy improv group (featuring Joe Bevilacqua, Lorie Kellogg, Cousin Kenny Savoy, Jim Folly, and Tom Giannazzo), musical satirists JibJab.com, writer-actor Sharon Greene of The Neo-Futurists theater troupe, radio theater producer Jeff Ward, actor-impressionist Matt Hurwitz, singer-songwriter Hugh Blumenfeld, and others. Plus, there'll be a look at political satire of the past with a rare 1956 Stan Freberg-Daws Butler sketch that eerily predicts television's future impact on political conventions.

The Comedy-O-Rama Hour is a weekly audio magazine of humor and stories about humor, written, produced and hosted by veteran radio producer Joe Bevilacqua. The show includes original sketch comedy, radio theater, satire, parodies, monologues, storytelling, standup comedy, songs, mini-documentaries and interviews, and airs five times a week on XM Satellite Radio's Sonic Theater Channel 163, as well as public radio stations around the country. The special will also be made available streamed on the web at: www.comedyorama.com.

"The Comedy-O-Rama Hour is one of the most unique and original productions out there these days. With Joe's talent for different voices, I never know what's coming next, or what it will sound like. Another thing that makes these shows stand out is that it is quite obvious to the listener that Joe and his cast are having fun making these shows, and that makes them fun to listen to as well." - Steve Karesh, Program Director, XM Satellite Radio Sonic Theater Channel, 163.

JOE BEVILACQUA BIO

Joe Bevilacqua first wrote Daws Butler (the voice of Yogi Bear) when he was 16 years old in 1975. Soon after, Daws appointed himself Joe's personal mentor and thus began a whirlwind 13-year apprenticeship. Bevilacqua has gone on to become is a veteran award-winning voice actor, radio producer, dramatist, humorist and documentarian.

His credits include such documentaries as From Moonshine to Armadillos: the Birth of the Austin Music Scene (2003), One Song at a Time: Tales from the Kerrville Folk Festival (2000) and We Take You Now to Grover's Mill: The 50th Anniversary of the War of the Worlds Broadcast (1988). His documentary Lady Bird Johnson: Legacy of a First Lady (2001) was heard in nearly 200 public radio stations and was a finalist for best documentary at the 2001 New York Festivals competition.

He is a frequent contributor to National Public Radio, and, in 2004, was awarded a Silver Reel Award from the National Federation of Community Broadcasters for his personal essay A Guy Named Joe Bevilacqua.

Bevilacqua has written and produced hundreds of radio plays, including the popular comedy series, The Misadventures of Sherlock Holmes (which he co-wrote with Daws Butler) and his pet project--The Whithering of Willoughby and the Professor, 18 surrealistic half-hours in which he performs all the characters himself.

He currently hosts, writes, and produces a weekly program, The Comedy-O-Rama Hour, for XM Satellite Radio's Sonic Theater Channel (163), which includes a regular segment called "Scenes from the Daws Butler Workshop."

Along with Ben Ohmart, he co-edited a book of Daws Butler scripts entitled Scenes for Actors and Voices in 2003 and in 2004 co-wrote the authorized biography: Daws Butler: Characters Actor.

Bevilacqua and his wife, Lorie Kellogg, recently renovating their cabin in the woods of Napanoch, NY, to look like a Jellystone Park Ranger's Station, where they live with their three dogs, George, Gracie and Zasu, and their two cats, Ignatz Mouse and Krazy Kat. Their unusual home is the inspiration for Bevilacqua's latest radio comedy creation: "Camp Waterlogg," about a dilapidated Catskills kid's camp populated by a cabal of crazy characters. The new series, which airs on XM Satellite Radio's Sonic Theater Channel 163, marks the on-air reunion of members of the "Liquid Comedy" Improv troupe: Bevilacqua,

Kenny Savoy, Jim Folly, and Tom Giannazzo, who have not worked together since 1979.

He died from boredom.

Sorry. Couldn't resist. I've never been able to stomach Delilah.

The Afghanistan war is worth fighting because Bin Laden was there.
The mission failed, and the troops were already in the area. So he
wanted to find something else to do. What is better than finishing
his father's job? The WMD and tie to 9/11 were all made up by the
liar to justify the war. Should we call this Iraq-gate?

Hello Gang, I know we have a few 'seasoned pros' who read the newsgroup

Besides the typical salary and bonus issues....Can anyone name some things that I should put on my "wish list" for my upcoming contract?

Usually 'contract time' is a good time to get a lot of those *little things* that seem like a pain in the neck at other times.

What would be on your wish list?

Have you heard of anything good that other's in radio have gotten in their contract negotiation?

Noty looking for the 'tall tales'...but more of the practical things one can/should include.

Thanks for your help

M

How many times has FOX News been caught broadcasting as *fact* something that their own fact-checkers said was probably fake?

At least to date, FOX News has been quite a bit more careful than CBS.

FOX News is not "conservative" media. A Yale University study on media bias showed that, while FOX is right-of-center, it is was no more to the right than USA Today is left-of-center. CBS is much further to the left. FOX News is actually closer to the center than any other TV news.

There is no conservative news channel.

Read his father's book "A World Transformed". He did not finish the job. He did a job his father explained should not be done because of the exact consequences we are now facing.
Pg. 489 A World Transformed by George Bush and Brent Scowcroft -
"We would have been forced to occupy Baghdad and, in effect, rule Iraq. The coalition would instantly have collapsed, the Arabs deserting it in anger and other allies pulling out as well. Under the circumstances, there was no viable "exit strategy" we could see, violating another of our principles. Furthermore, we had been self-consciously trying to set a pattern for handling aggression in the post-Cold War world. Going in and occupying Iraq, thus unilaterally exceeding the United Nations' mandate, would have destroyed the precedent of international response to aggression that we hoped to establish. Had we gone the invasion route, the United States could conceivably still be an occupying power in a bitterly hostile land. It would have been a dramatically different - and perhaps barren - outcome."

The WMD and tie to 9/11 were all made up by the

Amateur Radio Newsline™ Report 1415 September 24, 2004

Amateur Radio Newsline report number 1415 with a release date of
Friday, September 24th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Shortwave broadcasters say no to B-P-L,
big money awarded to put a pair of truly rare D-X locations on the air
and a satellite broadcaster joins the rescue radio cause. Find out
the details on Amateur Radio Newsline report number 1415 coming your
way right now.

THE BPL FIGHT: SHORTWAVE VS. DIGITAL SHORTWAVE

Amateur Radio has another friend in its fight to stop the world-wide
rollout of Broadband over Powerline technology. This, as a European
short-wave broadcaster say that B-P-L and digital radio will have a
lot of trouble co-existing. Fred Vobbe, W8HDU, is here with an update
on digital radio and an explanation of why the two do not mix.

--

Jacob Freedman, N2MPN, found an interesting story on BBC News Online
and thought he would share this news with A.R. Newsline listeners. In
the link to the story, titled "Fears for new digital radio system"
written by By Chris McWhinnie of BBC Monitoring in Amsterdam, the
warning came from Peter Senger, the chair of the Digital Radio
Mondiale (DRM) at the International Broadcasting Convention in Amsterdam.

DRM is a standard agreed by world broadcasters for a completely new
short wave radio system. The new internet power line distribution
system has been evaluated by engineers, including the BBC, and has
been found to affect short wave in particular.

Short wave is mainly used to broadcast internationally and the AM
bands have been used since radio first started in the 1920s. The DRM
system uses existing AM broadcast frequencies to deliver near-FM
quality digital sound. It uses compression to squeeze clear digital
sound into the narrow radio channels that currently carry crackly
analogue signals.

The DRM technology has the potential to make digital radio available
in places that Digital Audio Broadcasting (DAB) radio or even FM will
probably never reach. As for the hardware required to hear these
stations, there will be a new consumer DRM radio in the shops by

Christmas 2005 and a tiny PC-only DRM set is already on sale.

DRM is not being used by many radio stations yet. However a number of radio stations have seen the potential for new cross-border radio stations.

A Germany-based music station is believed to be in the planning stages. BBC World Service and its counterparts abroad already have some regular DRM programmes and are backing the system.

DRM is being seriously considered in many countries where the FM radio band is full. China sees DRM as the answer to pushing digital radio across its vast territory.

The UK is not planning to use DRM for domestic radio. The UK has pinned its digital hopes instead on DAB, which offers stations like BBC 1Xtra, 6 Music, Oneword and Core. More digital radios have been sold in the UK than any other country.

Switching-off analogue FM and AM may take years and making millions of much-loved analogue radio sets useless will no doubt be controversial. If power line internet transmission is introduced, then international broadcasting on shortwave may also be consigned to history due to the interference from data travelling over mains electricity cables.

For Amateur Radio Newsline, I'm Fred Vobbe, W8HDU

--

As we go to air, the proponents of Broadband Over Powerline have not yet challenged the Digital Radio Mondiale findings. (W8HDU, N2MPN)

**

PRESERVING THE BANDS: LEAGUE KICKS OFF 2005 SPECTRUM DEFENSE CAMPAIGN

Meantime, the ARRL has kicked off its 2005 Spectrum Defense Fund campaign and its slogan id that this is a lot more than just BPL. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

ARRL President Jim Haynie, W5JBP, appears to be the point man in this important effort to preserve our operating bandspace. He says that while interference from broadband over power line technology is the most prominent and immediate threat to amateur spectrum, donations from ARRL members and supporters make it possible for the League to face it and other spectrum challenges as well.

According to the ARRL Letter, in 1985, the League spent perhaps $200,000 on advocacy and spectrum defense. Today the annual outlay is close to $900,000.

Haynie says that he is aware that this work is something that hams cannot see, touch or feel, but it's just as important as those things

that they can. This is because we would not have all those other things if it were not for the fact that we have a place to operate.

Haynie notes that not all of the ARRL's advocacy efforts necessarily involve taking defensive measures, such as with BPL, but all of them are essential. The popular ARRL leader says that, as he sees it, the League's job is to look out for the best interests of all of Amateur Radio. This includes making sure that we have places in the ether to go on the air.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The ARRL says that the Spectrum Defense Fund depends on membership support and is essential to the League's continued success in this AREA. Contributions can be made on-line at the ARRL's secure donor Website. You will find it at https://www.arrl.org/forms/fdefense/fdefense.htm Those contributing at or above the $50 level may request a gift as a token of the League's appreciation. (ARRL)

**

BIG DX NEWS: NCDXF MAKES $100,000 GRANT TO UPCOMING OPERATIONS

Some big news in the world of DX. This as the Northern California DX Foundation announces some big money sponsorship grants for the 2005 D-Xpedition season.

The awards were announced at the recent W9DXCC DX Convention in Illinois. The recipients are the upcoming Kerguelen Islands FT stroke X and the Peter One 3YZ0X operations. These are two of the rarest and most wanted locations on every hams most wanted list.

Northern California DX Foundation president Len Geraldi, K6ANP, says that that these awards are substantially higher than normal amounts provided to aid major D-Xpeditions. Together they exceed $100,000, and represent the largest made in the foundations history.

Geraldi noted that these exceptional grants made in light of the rarity of operations from these locations and the significant individual contributions being made by the participants. He also noted the very high cost of mounting D-Xpeditions to such remote locations.

The Northern California DX Foundation not only funds DX operations. In cooperation with the IARU, the organization also maintains a worldwide network of high-frequency radio propagation beacons that help amateurs estimate the current condition of the ionosphere.

The Northern California DX Foundation was founded in 1972 to assist worthwhile amateur radio and scientific projects with equipment and funding. More about the group is on-line at www.ncdxf.org and we will

have more D-X news later on in this weeks newscast. (N4GN)

RESCUE RADIO: HURRICANE IVAN IS BACK AND JEANNE ON THE WAY

A reincarnated tropical storm Ivan has made landfall a 2nd time. This, near the Texas-Louisiana line on Thursday evening, September 23rd. The one-time hurricane was expected to dump up to ten inches of rain over the coming weekend.

The 22-day-old former hurricane broke apart after hitting the U-S, but a piece spun back out to sea and reformed as a separate tropical storm. It them made its way back into the Gulf of Mexico before again making landfall.

Forecasters say Galveston, Houston and College Station Texas will be under a flood alert. C-Q Magazine's Bob Josuweit, WA3PZO quoting sources at the ARRL says the Texas Office of Emergency Management has requested activation of the Amateur Radio Emergency Service Net. The net will switch between 7.285 and 3.873 MHz depending on propagation and time of day for as long as its needed.

Meantime, along the Eastern seaboard, ham radio operators are preparing for the arrival of Hurricane Jeanne. This as the killer storm appears to be zeroing in on the southeast U.S. coast, with forecasts putting Florida firmly in the storm's sights with landfall possible on September 24th or 25th. The Hurricane Watch Net on 14.325 MHz announced plans to begin operations Friday, September 24, 2004 at 10:00 a.m. Eastern and continue till until 11:00 p.m. or until the 20 meter band closes .

As we go to air news reports say that Jeanne is responsible for at least 1,100 deaths in Haiti. 1,250 are still missing and the toll continues to rise. More ham radio storm coverage next week. (WA3PZO, CQ, ARRL, ARNewsline(tm), others)

**

RESCUE RADIO: HURRICANE IVAN IN NJ

Hurricane Ivan left its mark all along the Eastern U-S before it finally disappeared from that area. From the Carolina's through New England, there were daily news stories about Ivan spawning tornadoes and severe flooding. One area hit by the remnants of the storm was the state of New Jersey which is the home on Amateur Radio Newsline's Henry Feinberg, K2SSQ.

--

Mercer County, New Jersey, ARES and RACES was activated at about 5 PM on Saturday, September 18th. This, to staff the radio room at the Mercer County Emergency Operations Center.

Heavy rainfall caused by Hurricane Ivan remnants in the Catskill and Pocono Mountains Friday night was forecast to cause the Delaware River to reach flood stage in Trenton at 6 AM Sunday and to crest at record levels Sunday night.

The original crest forecast was for 8 feet above flood stage which is 18 feet above normal river level. That was later reduced to 3 feet but was still the highest level on the Delaware River since the catastrophic floods of 1954.

In Mercer County, Amateur Radio Operators staffed the E-O-C radio room continuously in four hour shifts until Monday morning. The radio room is licensed as W2MER and has H-F, 2 meter, 220, 440 and APRS ham gear permanently installed. It also has capability on all public safety and Red Cross frequencies used in the county. Extra radio amateurs were on call over the W2ZQ Mercer County ARES and RACES 146.67 Mhz. repeater. This, if additional communications was needed at shelters and other locations.

Hams used the New Jersey Office of Emergency Management's statewide NJ2EM 220 MHz repeater and the statewide 2 meter APRS digital messaging network to maintain links with the Hunterdon County and Warren County EOC's further up the river. Per the Mercer County EOC protocol, the hams also were the operators of the public safety radios in the EOC to maintain contact with the sheriff officers coordinating the evacuations along the river.

Amateurs participating as EOC Radio Officers included N2GJ, N0YMV, K2GW, W2SRH, W2QOB, N2JV-P, and WA2KM.

For he Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, in New Jersey.

--

Gary Wilson, K2GW, is the Section Emergency Coordinator for Southern New Jersey Section. He says some 1500 people including 180 residents of a nursing home were evacuated to near-by shelters and hotels on Sunday the 19th. (K2GW)

**

RESCUE RADIO: XM SATELLITE RADIO TO ISSUE EMERGENCY ALERTS

There will soon be yet another source of emergency alert information, and you might say that this one is out of this world. Well kind of. Norm Seeley. KI7UP, has the details:

--

X-M Satellite Radio says that its getting into the emergency alert business. This by making available the X-M Emergency Alert channel to its more than 2.1 million subscribers, nationwide.

According to a September 10th press release the satellite radio provider will dedicate its Channel 247 to what it calls X-M Emergency Alert. The service will be dedicated to providing updated critical information before, during and after natural disasters, weather emergencies and other hazardous incidents to listeners across the country. The channel will also provide key survival information such as evacuation routes, shelter locations and updated weather emergency information for impacted areas.

Information sources of the broadcasts will include the Federal Emergency Management Agency, the National Oceanic and Atmospheric Administration, the National Weather Service, the U.S. Department of Health and Human Services and the American Red Cross. Also included will be local police and fire departments and eyewitness reports making the service about as all encompassing and up to the minute as it can get.

--

X-M hopes to have this new service fully operational fairly soon. (XM)

**

ENFORCEMENT: FCC QUESTIONS 40 METER MORSE PRACTICE OPERATION

The FCC has some questions for a Missouri ham who claims to be running Morse Code Practice on 40 meters. And in a September 2nd letter to Paul D. Westcott, KC0OAB, the regulatory agency also sets some pretty tough ground rules for him to carry on. Amateur Radio Newsline's David Black reports from our South-East bureau in Birmingham Alabama:

--

The FCC contacted Paul D. Westcott, KC0OAB, on June 21st of this year. The Commission told Westcott it was receiving complaints about high speed one way Morse code transmissions from his station on the 40 meter band. The Commission says it has complaints alleging that the ongoing transmissions interfere with normal amateur communications.

Westcott replied July 11th, saying his transmissions are indeed code practice, and he indicated that they are computer controlled. But the Commission now says Westcott's code transmissions are sent at an unvarying speed of about 30 words a minute. That they are sent continually, 24 hours a day, on 7.030 MHz. The Commission says the constant speeds casts doubt on Westcott's claimed motive for sending

the code transmissions.

The Commission reminds Westcott about amateur radio service rules requiring that a station be under the direction of a control operator during all transmissions. That means a control operator must be on duty at all the times Westcott's station is transmitting...and that he's responsible for preventing harmful interference to other stations.

The Commission tells Westcott to provide the dates, times and frequencies of all code practice sessions. And the FCC says that information is to be furnished by Westcott by either telephone or FAX at least one week in advance of any given transmission.

The Commission also wants Westcott to submit the name, address and telephone number of the control operator for all operation of KC0OAB when sending code practice. The FCC says the telephone number Westcott provides must be one at which the Commission can reach the control operator during the transmissions.

Finally, the Commission warns Westcott that enforcement action against him is coming if there are valid complaints that his transmissions continue to interfere with ongoing communications.

For the Amateur Radio Newsline, I'm David Black, KB4KCH, at the South-East bureau in Birmingham Alabama.

--

Westcott was given twenty days from the date of the FCC's letter to respond with the required information. (FCC)

**

INTRUDER WATCH REDUX: STRANGE SIGNALS AT 7.238 MHZ DISAPPEARS

And that strange unidentified signal that Bob Gonsett W6VR reported to us on two weeks ago. The one being heard by hams in Western states on 7 point 238 Mhz? Well guess what. It has disappeared as mysteriously as it showed up and nobody is very sure of exactly what it was.

According to several Newsline listeners and our own monitoring, the last time the raspy buzz saw was heard it was late on Wednesday September 15th. By the 16th it was gone without a trace and has yet to pay the 40 meter phone band -- or any other ham band for that matter -- a return visit. (ARNewsline(tm) from listener reports)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

THE SOCIAL SCENE: SWL'S MEET IN CALIFORNIA IN OCTOBER

Turning to the social scene. the 2004 Radio Fest gathering of SWL's is slated for Saturday, October 16th. This, in the Community Room of the F&M Bank in Seal Beach, California.

Radio Fest is sponsored by the Southern California Area DX'ers group. Doors open at 9:30 Pacific Coast time. This years speaker list include Radio School's Gordon West, WB6N0A, plus representatives from the broadcast and short-wave sectors of the listening hobby.

Interested? Well, for more information please contact Stewart MacKenzie by e-mail to wdx6aa@earthlink.net or phone 714-846-1685 during normal business hours on the U-S west coast. (SCADS)

**

WITH THE HANDIHAMS: 2005 CALIFORNIA RADIO CAMP ANNOUNCED

And the Handihams have announced that the 2005 California Radio Camp will be the week of February 27th through Sunday, March 6th. If you are a member with a disability and want to attend, please contact Handiham headquarters for a camp application package. You may either call the office toll-free at 1-866-426-3442, or e-mail hamradio@courage.org. (HandiHams)

**

RADIO EDUCATION: ARRL TEACHERS INSTITUTE

And a quick note on the highly successful ARRL sponsored first Education and Technology Program Teachers Institute held the second week of August. During the week long program Mark Spencer involved the teachers in hands-on activities for integrating wireless technology, Amateur Radio, Amateur Radio on the International Space Station and other space-related activities into their math and science classroom curriculum. And word is that at the end of the week the teachers had enjoyed themselves so much that some said they weren't ready to go home. (ARRL, ANS)

**

ALL POINTS BULLETIN UPDATE: $25000 REWARD OFFERED TO CATCH TOWER ARSONIST

An update to our story three weeks ago about a fire bug who seems to hate radio. A $25,000 reward is now being offered information leading to the arrest and conviction of the person setting fire to radio towers in the Clark County and Portland, Oregon during the past six weeks including a blaze that burned down a ham radio operators home.

The most recent fires, set close together occurred on September 9th in Portland. This, only 12 hours after a federally led task force asked

for the public's help in finding the man they think might be a serial arsonist working alone.

John W. McMahon, a supervisor with the federal Bureau of Alcohol, Tobacco, Firearms and Explosives told the press that a task force was offering a top reward of $10,000 for information leading to the suspect's conviction. Comcast, whose service was interrupted by one of the fires, added $15,000 to the reward. This raises the bounty on the fire bugs head to $25,000.

The fifteen member task force investigating the incidents has concluded they were linked to 12 communications tower fires set since July 29th. The most recent fires will raise the estimated damage done by the arsonist to more than $250,000. The 11 previous fires had targeted communications towers or equipment and one private Amateur Radio tower.

As previously reported, the ham-radio tower fire, which was set August 20th. At that time it was the seventh incident and spread to an adjacent rental house, leaving it badly damaged. The resident, John Stein, AB7F, cut his hand trying to put out the blaze before firefighters arrived.

And a group of Public Safety organizations that is trying to help capture the serial arsonist has published a wanted poster complete with pictures. You can find it as a PDF file of it at www.sbe124.org (Portland SBE, others)

**

HAM RADIO IN SPACE: KE5AIT COMPLETS CONTACTS WITH 7 CONTINENTS

Yet another ham radio record has been set . On Saturday September 11th, Mike Fincke, KE5AIT became the first crew member of the International Space Station to talk to all 7 continents using amateur radio. This, when he made contact with Palmer Research Station Amateur Radio station.

During the contact Fincke spoke with Chuck Kimball, N0NHJ, while a packed radio room at the center listened in. Fincke and Kimball compared life in the two stations, discussed time zone differences and the experiments involving fluids that Fincke was working with.

Fincke is believed to be only the third astronaut to accomplish this all continent feat. The last such occurrence was in 1992 aboard STS-45 when astronauts David Leetsma and Kathryn Sullivan also talked to Palmer Station to complete their continent contact list.

Fincke will be finishing his tour in the middle of October when Expedition 10 Astronaut Leroy Chiao, KE5BRW, and Cosmonaut Salizhan Sharipov will come aboard. (Courtesy of Kenneth Ransom, JSC)

**

NAMES IN THE NEWS: G3YJO NAMED VISIONARY AND INNOVATOR

And word that Space News International on the Space dot com website has honored a UK ham. This as it names Professor Martin Sweeting, G3YJO, as one of the top space visionaries and innovators.

In a recent article the news service said that Sweeting turned Surrey Satellite into the world's microsatellite builder. Also that under his guidance this British company has trained a new generation of spacecraft builders throughout the world helping countries like Turkey, Thailand, Korea and Chile enter the space age. (GB2RS)

**

HAM RADIO NEAR SPACE: AMATEUR RADIO HIGH-ALTITUDE BALLOONS

Attention East Coast hams. The first SimSat engineering test balloon flights are targeted for launch on Wednesday, September 22, in the Maryland and Virginia area. These two experimental exercises are designated SimSat-1A and SimSat-1B. This is a good opportunity to show a local students how to receive the balloon's simple telemetry beacon. (ANS)

**

WORLDBEAT - CANADA: NEW CALLSIGN OROPOSAL

The Canadian national ham radio society Radio Amateurs of Canada has submitted a proposal on Amateur Radio Call Signs to Jan Skora. He is Industry Canada's Director Genera for the Radiocommunications and Broadcasting Regulatory Branch.

The Proposal, as approved by the Radio Amateurs of Canada Board of Directors, makes recommendations on changes to Call Sign Policy and Special Event Prefixes. This, all comes as the result of the WRC-2003 decisions amending the ITU International Radio Regulations to permit call signs in the Amateur Service to have up to four characters in the suffix. (RAC)

**

DX

In D-X word that HA0HW and HA4DX are active as J45HW and J45DX respectively. This, from the isle of Rhodes through the 3rd of October. Activity will be on 40 through 10 meters using CW, SSB, RTTY and PSK31. QSL as directed on the air. (GB2RS)

And TA3J will activate the special callsign TC2K4J. This, from September 24th to November 2nd in memory of 40 Turkish Radio Amateur Silent Keys. Activity is on 160 to 2 meters using all modes. (GB2RS)

**

THAT FINAL ITEM: PART OF THE BEEB ON THE BLOCK

And finally this week it look as if a piece of radio history may be up for grabs. This with word that part of the world renowned B-B-C World Service is for sale.

The United Kingdom's publicly funded British Broadcasting Corporation has reportedly approached Germany's Bertelsmann Corporation along with U-S media giants Time Warner and the Walt Disney Company as potential bidders for BBC Worldwide. BBC executives expect the division, which includes BBC America, BBC Prime channels and 26 magazine titles could be worth up to 3.5 billion dollars of needed revenue.

The U.K. government is currently reviewing the BBC's funding and license. One report said that the broadcasters internal review of its options appears to be timed to coincide with the government's evaluation as well. (W8HDU, Bob Ulm, WDOH-FM)

Thanks, Paul. KODA it is. I used to listen to KODA (the call) when it played easy listen music on AM. <G>

And Mark... I was thinking KLEF was the station that gave its classical library to KUHF. I didn't know KUHF was a jazz station before, though.

KTSU is my favorite jazz station. (Could they have received KUHF's jazz library?) Sometimes the signal received here on the western shore of Galveston Bay is marginal -- part weather, part bracketed by high powered, maybe overmodulating Xian stations, I believe.

To Fred et al.: I doubt the Internet is much of a threat, because expensive bandwidth limits the amount of listeners who can be served at one time. But those two satellite radio services are a big threat.

On the other hand, there are jillions of cheap radios out there that people listen to. Of course, digital radio, if it becomes mandatory, will kill that market. What are the authorities thinking? Heck, I have AM/FM/SW receivers that cost under $10; the better ones under $20. (I also have even better ones than those.)

Bill,
SE Texas

> their commentators?
>

Quote from the study:

" Few studies provide an objective measure of the slant of news,
and none has provided a way to link such a measure to ideological
measures of other political actors. That is, none of the existing
measures can say, for example, whether the New York Times is more
liberal than Tom Daschle or whether Fox News is more conservative
than Bill Frist. We provide such a measure. Namely, we compute an
ADA score for various news outlets, including the New York Times,
the Los Angeles Times, USA Today, the Drudge Report, Fox News?
Special Report, and all three networks? nightly news shows.

Our results show a very significant liberal bias. All of the
news outlets except Fox News? Special Report received a score to the
left of the average member of Congress. Moreover, by one of our
measures all but three of these media outlets (Special Report, the
Drudge Report, and ABC?s World News Tonight) were closer to the
average Democrat in Congress than to the median member of the House
of Representatives. One of our measures found that the Drudge
Report is the most centrist of all media outlets in our sample. Our
other measure found that Fox News? Special Report is the most
centrist. These findings refer strictly to the news stories of the
outlets. That is, we omitted editorials, book reviews, and letters
to the editor from our sample. "

It will be interesting to see if any of Clear Channel's 1200+ radio
stations in the U.S. will add John Fogerty's Deja Vu (All Over Again)
to playlists.

Deja Vu (All Over Again)

Did you hear'em talkin' 'bout it on the radio
Did you try to read the writing on the wall
Did that voice inside you say I've heard it all before
It's like Deja Vu all over again

Day by day I hear the voices rising
Started with a whisper like it did before
Day by day we count the dead and dying
Ship the bodies home while the networks all keep score

Did you hear'em talkin' 'bout it on the radio
Could your eyes believe the writing on the wall
Did that voice inside you say I've heard it all before
It's like Deja Vu all over again

One by one I see the old ghosts rising
Stumblin' cross Big Muddy
Where the light gets dim
Day after day another Momma's crying
She's lost her precious child
To a war that has no end

Did you hear'em talkin' 'bout it on the radio
Did you stop to read the writing on the Wall
Did that voice inside you say
I've seen this all before
It's like Deja Vu all over again
It's like Deja Vu all over again

It's actually true. There are of course conservative
talk shows. But no actual "news channel" that is
consistently substantially to right of center. That's
exactly what the previously quoted showed.

All except Fox and MSNBC are very far left of center.

People who say things like "Fox is right wing" are
simply WRONG. They are weong because they are using
a cloud cookoo land definition of center. That is, they
simply assign themselves ... quite left wing people ...
as center.

Whe you ACTUALLY look at the real world, for example,
the Congress, Fox is very close to the center. If you
look at all the people, same result.

Thousands of music lovers have discovered commercial-free U.S. satellite radio stations, leaving Canadian companies - and the CRTC - scrambling to catch up

Paul Brent
Financial Post

http://www.canada.com/national/nationalpost/financialpost/story.html?id=e702acb5-a3fd-4bec-aa73-3e2f11515232

Saturday, September 25, 2004

Nearly two years ago, Karen Pace found religion. And like a true believer, she's been spreading the message ever since.

Ms. Pace, 38, a Toronto music publicist, is an apostle for Washington-based XM Satellite Radio, the world's largest satellite radio service, whose beams sweep across Canada unimpeded by the country's broadcasting regulators.

"I have personally signed up 14 of my friends," she says. "I wish everybody had an XM radio. I wish for Christmas I could afford to buy everyone I know an XM radio."

Ms. Pace is not your typical music lover. She listens to satellite-delivered music 40 to 50 hours a week, in her car driving to New York or Montreal on business, as well as on a portable radio in her home and cottage, all for the subscription fee of US$10 a month. Her love of the digital-quality sound and variety from 68 commercial-free music channels has also meant she has largely abandoned commercial radio.

"Radio plays the same artists over, and over, and over," she said. "That is not what radio used to be. It was when the large corporations took over radio, and radio became about ad sales in the early to mid-'80s that we lost content."

Ms. Pace and an estimated 20,000 to 30,000 other Canadians are "grey market" participants, unauthorized if not illegal. They are not exactly the regulatory scourge of those who take in U.S. satellite television satellite signals -- yet. That is because the Canadian Radio-television and Telecommunications Commission has yet to turn its full attention to the matter.

In hearings this November it will be up to the broadcast regulator, a lightning rod of controversy for ordering the shutdown of CHOI-FM in Quebec City and the barring of Italy's state broadcaster RAI International, to decide what to do about what appears to be the greatest threat to commercial radio since the advent of television.

Satellite radio is the fastest consumer product to reach one million units sold, its backers say, and is on track to hit 40 million subscribers by the end of the decade. The U.S. firms already have deals with the world's major automakers, which now offer satellite-ready radios from one of the services in their cars. The decision seemed simple for the CRTC -- acknowledge reality and let them in -- so much so that the commission issued a call last year to have someone, anyone, propose a made-in-Canada alternative.
CHUM Ltd., a Canadian radio pioneer that operates 30 radio stations across the country, heeded the CRTC's plea and has proposed a less-ambitious (and less capital-intensive) system that will offer the same digital-quality sound without the need for satellites. Not utilizing shiny steel birds orbiting at 22,000 feet means CHUM will need to erect transmitters in major urban centres and create and sell new digital receiver radios. Urban, young and cheaper, it's a system that by its nature will not reach all Canadians.
Still, CHUM's late entry, and the announcement this week that Quebec-based Astral Media Inc. will be a 19.9% partner in CHUM Subscription Radio, makes the coming hearings worth watching.

Following up, there are about 1,700 stations that could be called "rock" in the US, and there is no statistical way that CCU could own 60% of them.

I count, using data updated last week, about 315 CCU stations in rock, alternative, classic rock and non-rhythmic CHR. That is closer to 18% than 60%.

This is the stuff of urban legend.

Hi All,

I am looking for manuals to scan that are related to
Collins Broadcast equipment and accessories. Audio
consoles etc.
You can currently find a number of manuals on the
Collins Collectors Association website:
www.collinsradio.org the manuals are on
http://www.collinsradio.org/html/manuals.html

There are a number of broadcast transmitters and audio
consoles and accessories available for free download.
I am trying to
complete the broadcast section of the CCA archives. We
have the permission of Rockwell Collins to scan and
reproduce these manuals.
If you have any manuals of Collins Broadcast equipment
that I may borrow to scan please let me now. I will
pay shipping both ways and include a digital version
of what you have sent me. Thanks to the number of you
that have stepped up to the plate and provided the
manuals that you have to make the broadcast area of
the CCA website the best place for Collins equipment
anywhere on the internet.
Thanks for your help!
Larry WA9VRH

No, it does not. There is no reputable format tabulation that shows this.

One man's liberalism is another man's conservatism. The "average member
of Congress" would look like an antideluvian right-winger in England.
Ditto in the US of the late 1940s.

But in the US the whole "true left" end ot the spectrum of public
opinion, socialism, is missing, neatly excised by the long pressure of

the Cold War. Now the American right wing is busily propogandizing us into believing that traditional liberals, who have always been staunchly pro-capitalist and are more like libertarians than anything else known, are "leftists".

They'll probably succeed, too.

In response to the subject of this thread:

Yes, the song is being played on classic rock stations. Clear Channel owns Q-104.3 (WAXQ-FM) here in New York. I heard the song a few times last week, since I listen to the station constantly at work.

>This is the stuff of urban legend.<

Nah. It's not even that complicated. It's just the "we hate CC" crowd who will do or say anything to paint CC as the ultimate villain in the radio business. They never seem to let the facts get in the way of their fantasies.

# 2443. Vinatage offshore radio - MV Kanimbla

Newsgroup: rec.radio.broadcasting
Date: 2004-09-28 01:45:53 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cjafoh$p0h$1@xuxa.iecc.com>
Source record: 3983
Cross-posted to: alt.pirate.radio,alt.radio.pirate,rec.radio.broadcasting,rec.radio.shortwave

An article from a Magazine called Broadcast in 1936 opened with the message that there's is now in Australian Waters and on Australian service the first vessel in the British Mercantile Marine to carry on board a radio station.' The station operated on the ship to shore band and transmitted, following the words of the journalist, a so called 'sea to shore program'. Surprisingly I found out years ago that they used a ship which was brand new and came over from Belfast to Sydney a week before transmissions began. A call sign '9MI' was used for the broadcasts, with speech and music.'

The MV Kanimbla was for those days a most modern ship equipped with a 1,5 kW valve transmitter and special studios. The transmitter was crystal controlled, and was designed to operate on any wavelength between 20 and 50 metres. Mostly the signals went out on 25.54 and 49.47 metres. It was possible to maintain in contact with the Australian listeners during the voyage along the coasts of Australia as well as over considerable ranges during any voyages 'overseas'. For this last purpose the ship was also equipped with a short wave transmitter. Another newspaper mentioned that 'this apparatus which in her run from Belfast to Sydney enabled the owners to keep in touch daily with the commander of the vessel. Also during the maiden voyage the chairman of the Amalgamated Wireless, mr Fisk, who's company manufactured the apparatus at the MV Kanimbla, had almost a constant contact versus short-wave with the commander on the ship.'

The special studios on the ship were replicas of the most modern ones overseas and the chief announcer was Eileen Foley from Sidney in Australia. 'During the ship is at sea the programmes were also available for the people on the ship by a wide range of loud speakers and all the programs were made live on the Kanimbla. Even three different programs could be heard at the same time at the system. Some loudspeakers carried sport results which were picked up from land stations. Also artists were engaged for a certain trip to entertain the passengers as well as the listeners of the radio programs.

Another piece on the station could be found back in the proceedings of the World Radio Conference, which was held in Sydney in April 1938. 'On the evening o f 9MI's inaugural broadcast on May 28, during her maiden voyage to Australia, we were about 1000 miles from Sydney. Excitement was running high on board pending the success of the broadcast, and the possible temper of atmospherics. The program was relayed throughout the national stations of Australia at 8 pm. At 20 minutes to 8 atmospherics were very bad, and the possible success of this pioneer effort hung in the balance. However, optimism won the day - the elements cleared and the broadcast was considered very successful. Although the Kanimbla had not yet, at that stage, had bad weather, there have been times when she has given a heavy roll during a broadcast. Things have gone flying over the table.'

Eileen Foley commented on the rolling of the sea to her listeners: "I have then asked my listeners to please stand by, while I have freed myself from the studio furniture and the chosen records. So you see one needs a sense of balance - and well, the show must go on. On these occasions, I recall to mind the optimist who fell from the ten store building, and at each window shouted to his friends: 'All is well, so far'."

She had more to tell about the programming and artists: "In addition to compiling programmes from the large record library, the Kanimbla Quartette of girls, and often talented artists traveling with us, take part in the broadcasts. Many distinguished speakers have broadcast from 9MI, including Sir Ernest Fisk, who's manner at the microphone is incomparable and who has the fine sense of humor which makes his talks a delight to listen to. Among other well known personalities, I recall Sir Edward Cunningham, Sir Wallace Bruce, ex Lord Mayor of Adelaide, Professor Charteris from Sydney University and many others. Amongst world famed artists I recall Richard Crooks who gave an interesting interview when traveling with his family on the ship from Sydney to Melbourne. Richard Crooks was specially fascinated with our floating broadcasting station, and I thought at the time that, with a little persuasion, he would sing. However, I remembered perhaps in time, that he was on holidays, so curbed my desire to hear that great voice."

There were other artist who chose to travel with the ship as Foley recalled: 'It is interesting to see that a number of radio artists have purposely chosen the Kanimbla for their holidays. It would seem that the microphone they have left behind is still with them, as it were - and they, as 'busmen, apparently want to spent their holidays close to their work! Those passengers are very welcome in our studios. Passengers traveling on the Kanimbla have a unique opportunity of 'trying' themselves out over the 'mike '. Each trip we organize is amplified through our public address equipment to the various speakers on board. This innovation creates interest, and often good talent is discovered. Recently one of our entrants in the Nautical Parade was offered a 'shore job' by a manager of a station, traveling with us, who at once spotted a pleasing quality in the voice."

But Eileen Foley was not the only one presenting on the station. Also Captain Smith was a regular voice to be heard as he was always keeping his weather eye open for interesting things to tell to the listeners. Of course in those days less people had their own receiver but those who had one and picked up the signals of the station were truly not unhappy. Hundreds of letters from the listeners came in stating excellent reception from 9MI, both direct, on short-wave, and via the national stations. During the voyage out, while the MV Kanimbla was off the west east coast of Africa, the test programs were heard in a good volume in Australia, Great Britain and other parts of Europe. Reception reports were answered with a QSL card.

No, you are wrong. That study only examined news stories. 90% of Fox
programming is not news stories.

>

Fox's actual news stories may be close to the center, but the majority of
their programming is way right of center.

Yes, you are correct: while Fox is extremely right-wing, it is not a "news channel". Rather, it is Republican propoganda in the guise of entertainment loosely disguised as "news". Sort of like a neo-conservative Saturday Night Live, minus the humor. Or at best a political Jerry Springer or Howard Stern, with politicians etc. as the dysfunctional guests/entertainment.

> All except Fox and MSNBC are very far left of center.

True, if you are looking at things from the point of view of John Poindexter, Dick Cheney, or John Ashcroft (or the point of view of Rupert Murdoch or Roger Ailes). Some years ago one of the initiators of the "liberal media" myth essentially admitted that the media was "liberal" only because all of society was liberal form that person's point of view. These people wanted a definitively right-slanted media in order to influence society, not to reflect it. And they came up with the scam (which they are fully conscious of, even admitting publicly that it's a wonderful racket) of accusing mainstream media, which strives not to be biased, of being biased, when it is they, the accuers, that are actually biased and making no attempt to be fair. But if you keep saying it, people will believe it, right?

> People who say things like "Fox is right wing" are

>
> Whe you ACTUALLY look at the real world, for example,
> the Congress, Fox is very close to the center. If you
> look at all the people, same result.

You are naive enough to believe that Congress is a good reflection of the real world?

In the "real world", the large majority of the population disagrees with actual Republican policies in virtually every area, when they are each taken in isolation and stripped of rhetoric: universal health care, abortion, welfare, taxes, gun control, separation of church and state, education,

drugs and crime, media ownership, environment, labor relations, workplace safety, civil rights, corporate accounting abuses, etc. But the right wing have become masters of deception and framing the issues in such a way that their bad positions are made to look good and their opponents are forced to debate on their terms. Continual mudslinging and misdirection of blame onto their opponents only helps their cause.

They also have their own right-wing "news" outlet in Fox, which doesn't bother with fact checking or even trying to tell the truth, freely mixes editorializing with "reporting", gives no time at all to balancing progressive points of view, and generally plays out the Republican leadership's philosophy that politics is war, to be won at any cost (get all the spoils and kill your opponents). There is nothing in the current Republican philosophy about building a better world or country, about benefitting the population as a whole, about accommodating different points of view, or about reasoned debate about policies. It is all about winning: disparaging and degrading your opponents and discrediting them and their points of view. Then you can get all the spoils.

And the mainstream media have played along: despite being "liberal" (if that's really the case: a 1998 study showed that the Washington press corps, at least, were more conservative than the general public on issues such as trade, taxes, Social Security, health care and corporate power, and the majority of newspapers have endorsed Republican candidates in virtually every election this century), individual reporters have been unable to provide accurate and meaningful information in the face of this propoganda blitz, largely as a result of their rules of proper journalism: since most of what Bush and his cronies say has a tiny grain of truth mixed with subjective opinion and gross exaggeration, they can't be called the liars they so clearly are (it's also not in the nature of journalists to make such accusations: rather, they try to present the facts and let the reader or viewer decide for him or herself; the Republicans know this very well). All journalists can do is put such statements up against what Kerry (or whoever) says in return, and hope the reader can judge. But with all the noise, misdirection, deception, outright lies, continual repetitions of untruths, accusations, and false impressions, it's difficult for anyone to tell what's true or not, and at best they may come away confused and not knowing whom to believe. See: http://www.fair.org/press-releases/swift-boat.html

Also, due to the massive, well funded and organized letter/email/phone/fax attacks the stations or papers receive any time anyone says or writes something not quite conservative enough, they've been cowed into taking a right-of-center view much of the time. (Not all of the time, but moreso than they would naturally.)

Even when they can do meaningful reporting, it often gets drowned out. See: http://www.fair.org/press-releases/cbs-bush-documents.html

Another reason reporting glosses over many issues is that the media is far more concentrated now than it used to be, and owned by major corporations. This is something that's happened without most people being aware of: most media in the U.S. are now owned by a small number of major corporations, due

to relaxations in media ownership rules by the likes of Michael Powell (but starting many years earlier). Clearly there are many potential conflicts of interest when, for instance, NBC covers news about GE, ABC about Disney, or CBS about Viacom. (see http://www.fair.org/extra/best-of-extra/ge-boycott.html for one old example. There are plenty more, and the situation is certainly not getting better.) But in addition, large corporate media are concerned about keeping large corporate advertisers happy, and also about keeping the recipients of large political donations happy so that policies will move in the direction of unrestrained profit-making. "News" is really about profit, by way of being entertaining enough to hook an audience and hence major advertisers. None of this creates an atmosphere conducive to reasoned and penetrating reporting in the best interest of U.S. citizens.

# 2448. Does XM know what I am listening to?

Newsgroup: rec.radio.broadcasting
Date: 2004-09-28 01:45:58 UTC
From: tkoppel@nyx3.nyx.net
Message-ID: <cjafom$p20$1@xuxa.iecc.com>
Source record: 3985

A question about Satellite radio (XM in particular)

Obviously they have some way to know that they are broadcasting to an individual receiver, else (a) they couldn't sell and send signal to specific devices who pay and not to others and (b) they can deliver specific programming (Playboy channel, Opie and Anthony) to specifc receivers.

But - suppose I listen to 'non-premium' channels - for instance, I listen to 15 (folk music) on weekends and 7 (70s music) during the week, and 132 (C-Span) during rush hour. Can XM track that information to a per-subscriber level? Do they have a way to know, for instance, that any moment there might be 400,000 people listening to NASCAR and 1000 to America Left? What's their capability for usage analysis?

(The reason I ask - I like 15-Folk and I hope that enough people listen to it to keep it on the air.)

Bill Ballance Dead At Age 85

The legendary Southern California radio personality made his mark as one of the original "Swinging Gentlemen" at then-Top 40 KFWB/Los Angeles. Ballance was perhaps best known for his years as host of one of the first radio talk shows to target women listeners, The Feminine Forum on KGBS/Los Angeles in the late 1960s and '70s. His radio career also included stints at KMYR and KOA/Denver, KNX/Los Angeles and KFMB-AM/San Diego, where he spent his final on-air years before retiring in 1994.

Leonard, that is a very telling statement. Is that an observation of your
own as I'd love to pass that along with proper attribution.

Actually, as I quoted from a scientific study, I am
correct.

People who think Fox is right wing are generally
from very close to the coasts, in areas where Fox really
is right of the center for that local groups of people.

Go to Alabama or Wyoming and you will find Fox to
be well to the left of the center of those people.
Limbaugh would be closer to their center. When
you average over the whole USA, as represented in
Congress, Fox is centrist.

Bill Ballance was forerunner of shock jocks
Associated PressSeptember 26, 2004 

SAN DIEGO -- Bill Ballance, a radio personality whose bold 1970s talk show tackled relationships and sex and helped pave the way for today's shock jocks, has died at age 85.

Ballance died at home Thursday, according to his son, Jim. He had been in failing health.

Ballance's "Feminine Forum" became one of the most popular radio shows in Los Angeles after it debuted in 1971 on KGBS-AM.

Racy and confessional, the show drew many listeners, both male and female, with topics such as "Where did his love go and how did you know it was gone?" and "Are you a red-hot mama?"

"Feminine Forum" provoked anger among women's rights activists, who accused Ballance of exploiting callers.

"The 'Feminine Forum' was really the forerunner to radio's Tom Leykis and Howard Stern," said Don Barrett, executive editor of LARadio.com.

In the late 1990s, Ballance caused another stir when he sold nude photographs of radio therapist Laura Schlessinger to a company that posted the photos on the Internet. Schlessinger, who had been a regular on Ballance's show, was outraged.

You mean the Communists and Socilaists.

"Center" means what it means. Of course, to quote the
famous Centist Democrat, Bill Clinton, it all depends on the
meaning of the word "is".

Those that say "Fox News is right wing" are simply
misusing the word "is", not the phrase "right wing".
These people are living in the world of 50 years ago
when Communism and Socialism were actually active. Today,
Fox is centrist.

Source record: 3988

Sahara Manoranjan is all set to launch its radio network that will be heard across the world. The move follows its purchase of four channels on the WorldSpace Satellite Network. To begin with, the radio channel will air Hindi film songs and programmes.

Meanwhile, the Sahara Manoranjan TV channel will be called SaharaOne from October 10.

Satish Menon, president, sales, marketing and distribution of Sahara Manoranjan, said that the project cost of SaharaOne radio services is estimated to be around Rs 1,500 crore (Rs 15 billion), which will be invested over a period of three years.

"The WorldSpace satellite network is gaining ground globally and a couple of radio receiver set manufacturers of the country have even begun manufacturing compatible radio sets. We aim to provide a whole range of radio services through the endeavour," he said.

With a potential of millions of radio audience across different demographies, India presents one of the greatest opportunities for the satellite radio market. SaharaOne Radio will play the leading role in spurring growth in a hitherto untapped market.

Added Menon, "We are confident that SaharaOne will be the future of media entertainment in India. Today, we have the unique opportunity to offer entertainment concepts across different avenues on a scale and magnitude never before seen in the Indian entertainment industry."

SaharaOne will be the umbrella brand across four major businesses of motion pictures, radio, television and special projects, he added.
Commenting on the movie production front, Menon stated that while 10 to 15 movies produced or jointly produced by Sahara Manoranjan have already been released, about 40 more are in the post-production stage.
"The plan over the next three years or so is to produce 250 movies, with about 40 movies this calendar year," Menon stated.

>Obviously they have some way to know that they are broadcasting to an individual receiver, else (a) they couldn't sell and send signal to specific devices who pay and not to others and (b) they can deliver specific programming (Playboy channel, Opie and Anthony) to specifc receivers.<

No, they don't. The system works the same way as an addressable cable box. Digital data streams are sent to the receiver to unlock certain channels. The only way they could know what station the radio is actually receiving at any given moment would be for every receiver to also be a transmitter...and thus, in the case of satellite radio, every receiver would also need a dish which would automatically lock in on the nearest satellite.

>But - suppose I listen to 'non-premium' channels - for instance, I listen to 15 (folk music) on weekends and 7 (70s music) during the week, and 132 (C-Span) during rush hour. Can XM track that information to a per-subscriber level?<

No. Their business model doesn't require that sort of information, and as explained above it's impossible to obtain anyhow.

>(The reason I ask - I like 15-Folk and I hope that enough people listen to it to keep it on the air.)<

You have to let them know that by other means...most likely either request lines, e-mail or snail-mail.

No signal is transmitted back to XM from the receivers, so there's no way XM knows what you're listening to. Randomly e-mailed surveys, I believe, are what XM bases its listenership estimates on.

I listen to channel 15, too, and would love to tell XM so, but have never been surveyed in my two years as a subscriber.

Howard

news:cjafop$p2k$1@xuxa.iecc.com...
>
> Actually, as I quoted from a scientific study, I am
> correct.

That study is, to put it politely, bunk. First, there was absolutely no attempt to measure whether Congress is really a good reflection of the views of the American public. (And no, it's not self-evident just because "we elected them".) Second, there was no attempt to show that the rate of quoting publications of think tanks is a valid or useful measure of the political views of members of Congress, or of the media. And those are just the first two fundamental flaws that could be noticed right away.

A "scientific" study should account for all such things, or not try to make claims about something that it is not measuring -- a real scientific paper would have only been titled "A Comparison of Quotation Rates from Think Tanks Between Congress and Major Media", wouldn't have editorialized about its results, and wouldn't have claimed to have greater meaning than it really did. Such a paper would also be peer reviewed before publication, which this paper was not. In addition, any true scientific study would not be widely accepted as fact until it had been even further reviewed, all experiments re-run by other researchers for confirmation, parallel experiments and data collection done to corroborate from different angles, and thoroughly gone over and re-tested and re-analyzed until its results were considered ironclad. At this point, the paper in question is nothing but opinion with some selected statistics to back it up, and you know what they say about statistics...

Even if it does say something about the relative positions of the news media to Congress in terms of quotation rates from think tanks, it is just as likely saying something about how conservative Congress is as about how liberal the media is.

But I think it is mainly saying that right-wing think tanks are quoted a lot precisely because they are nothing but influence organizations. Traditional think tanks (like Brookings and Rand) primarily existed to do research. Modern Republican think tanks (like Heritage, American Enterprise, and Cato), exist to further a conservative political view, and to publicize and promote that view. They generally spend more on PR than they do on research, so it's no surprise they have a lot of visibility (as that's the entire purpose of PR).

> People who think Fox is right wing are generally

You may be right that progressivism is more concentrated near the coasts, but an awful lot of people live in those areas. There are 70 times as many people in California as in Wyoming, for instance, and almost 8 times as many as in Alabama.

GELLER MEDIA INTERNATIONAL NEWSLETTER FALL 2004

DON'T MISS THE SESSION AT THE NAB:

"Why can't we find any great talent?"

That's the lament of managers all over the planet. The biggest challenge facing many managers is finding, developing, and growing on-air people who will attract large audiences and lead your stations to greatness.

DON'T MISS THE NAB!
If you are struggling with this and will attend the National Association of Broadcasters meeting in San Diego, I invite you to my session on Talent Development , taking place Friday, October 8th at 1:45 PM.
(for details: www.nab.org)

There, you'll have a chance to learn proven Powerful Radio methods used worldwide to find and develop on air talent. In a question/answer forum, including case studies, you will hear respected and experienced broadcast managers who've all had years of success developing talent.. Dan Vallie of Vallie/Richards, Rod Arquette program director of KSL Salt Lake City, and Joyce McCullough, General Manager of the Miller Media Group in La Salle, IL, will all be joining me for this discussion.

If you cannot be with us in San Diego, here are a few ideas you may find useful in finding, growing and developing air talent.

Geller Media International
Secrets to Powerful Radio Talent Development.

HIRE RIGHT:
1. Know what you want: Don't hire an apple when you really want an orange. (Example, it's not fair to hire a strong personality and then shut him or her "down" with tight or restrictive formatting.)

NOTE: For on air personalities and producers: This also means you need to take responsibility and make certain this "casting" is right for you. Don't take a job that puts your "foot "in a "wrong shoe." If you are looking for a gig, and the one you are offered isn't really right for your skill set or talent, don't take THAT job!

2. How do you find these people?
Look beyond the obvious, go beyond hiring someone who just sounds polished and professional. Find great storytellers. People who have original thought, are good listeners, with a sense of humor. If you cannot find a broadcaster,

look for people who are smart, passionate, comfortable communicators, real personalities. People who like to talk, have interesting things to say, and are also good listeners.

We've had luck developing people from a myriad of professions other than broadcasting for radio including lawyers, teachers, psychologists, ministers, priests, writers. Many have become successful and powerful broadcasters.

We can teach a talented communicator how to work in radio. This includes introducing them to the target audience we are trying to reach, showing the potential on-air personality HOW the listener uses radio, and how intimate and personal the medium of radio is. (eg: Talk directly to the ONE person listening, the importance of describing visuals, etc.) After they've tried it, we aircheck in a one-on-one coaching session, using specific criteria, while playing back the program. This helps each individual move up to the next level of performance.

AIRCHECK CRITERIA:
3. Things to look for include: What journey did this show take you on that you could not have gotten to on your own? What was new? Was this funny? Did it have a talkable topic that listeners could discuss with others when the radio went off? Was it boring? Did you feel the time passed quickly or did it drag by? Did the show hold up a mirror and reflect life? Do you "know" the presenter from hearing the show? Would the listener feel connected to the talentr? Was it fun? Informative? Were any risks taken? Were there any surprises? Were you entertained?

You can find more on airchecking in "The Powerful Radio Workbook: The Prep, Performance & Post Production Planning." www.gellermedia.com

GELL=
ER MEDIA INTERNATIONAL NEWSLETTER FALL 2004

DON'T MISS THE SESSION AT THE NAB:

"Why can't we find any great talent?"

That's the lament of managers all over the planet. The biggest challen=
ge facing many managers is finding, developing, and growing on-air people wh=
o will attract large audiences and lead your stations to greatness.

DON'T MISS THE NAB!

If you are struggling with this and will attend the National Association of=20=
Broadcasters meeting in San Diego, I invite you to my session on Talent D=
evelopment , taking place Friday, October 8th at 1:45 PM.

(for details: www.nab.org)

There, you'll have a chance to learn proven Powerful Radio methods us=
ed worldwide to find and develop on air talent. In a question/answer f=
orum, including case studies, you will hear respected and experienced broadc=
ast managers who've all had years of success developing talent.. Dan V=
allie of Vallie/Richards, Rod Arquette program director of KSL Salt Lake Cit=
y, and Joyce McCullough, General Manager of the Miller Media Group in La Sal=
le, IL, will all be joining me for this discussion.

If you cannot be with us in San Diego, here are a few ideas you may find use=
ful in finding, growing and developing air talent.

Geller Media International

Secrets to Powerful Radio Talent Development.

HIRE RIGHT:

1. Know what you want: Don't hire an apple when you really want an orang=
e. (Example, it's not fair to hire a strong personality and then shut=20=
him or her "down" with tight or restrictive formatting.)

NOTE: For on air personalities and producers: This also means you need to ta=
ke responsibility and make certain this "casting" is right for you. &nb=
sp; Don't take a job that puts your "foot "in a "wrong shoe." If you a=
re looking for a gig, and the one you are offered isn't really right for you=
r skill set or talent, don't take THAT job!

2. How do you find these people?

Look beyond the obvious, go beyond hiring someone who just sounds polished a=
nd professional. Find great storytellers. People who have origin=
al thought, are good listeners, with a sense of humor. If you cannot f=
ind a broadcaster, look for people who are smart, passionate, comfortable co=
mmunicators, real personalities. People who like to talk, have interesting t=
hings to say, and are also good listeners.

We've had luck developing people from a myriad of professions other than bro=
adcasting for radio including lawyers, teachers, psychologists, ministers, p=
riests, writers. Many have become successful and powerful broadcasters=
.

We can teach a talented communicator how to work in radio. This includ=
es introducing them to the target audience we are trying to reach, showing t=
he potential on-air personality HOW the listener uses radio, and how intimat=

e and personal the medium of radio is. (eg: Talk directly to the ONE p=
erson listening, the importance of describing visuals, etc.) After they've t=
ried it, we aircheck in a one-on-one coaching session, using specific criter=
ia, while playing back the program. This helps each individual move up=
to the next level of performance.

AIRCHECK CRITERIA:

3. Things to look for include: What journey did this show take you on that y=
ou could not have gotten to on your own? What was new? Was this=20=
funny? Did it have a talkable topic that listeners could discuss with=20=
others when the radio went off? Was it boring? Did you feel the=20=
time passed quickly or did it drag by? Did the show hold up a mirror a=
nd reflect life? Do you "know" the presenter from hearing the show?&nb=
sp; Would the listener feel connected to the talentr? Was it fun? =
; Informative? Were any risks taken? Were there any surprises? Were yo=
u entertained?

You can find more on airchecking in "The Powerful Radio Workbook: The=20=
Prep, Performance & Post Production Planning." www.gellermedia.com

By that logic, then, a cool day on Venus would be somewhere around 350C, rather than
400C.

You can't measure the centre based on the average of a pre-selected group.
Left/right, when considering politics, can be easily determined in a vacuum if you
look at the policies and values of each group. Conservatives view the world as
entirely self-actuated, self-rewarded and assumed risk at the individual level.
Facism extends this concept to business, where the relationship between government
and business is distinctly favoured over individual rights. Socialists and, going
further, communists (and not the Soviet kind) view the world as mutually-actuated,
mutually-shared rewards and mutually-shared risk. By that measure, Congress is
distinctly conservative, FOX News is clearly right-wing, and we're all going to hell.

CBS, as is the case for all legitimate news organisations, is better at covering a
story with balance and provides opportunities to hear opposing views. FOX exhibits
no such behaviour. And Steve is right.

In a word, no. Without an uplink (XM and Sirius receivers are no different than a conventional radio in that regard) there's no way for XM to know if anyone's listening. This is, perhaps, one of the reasons why they're now duplicating (although they're charging for it) Sirius' music streams on the web, so as to measure who (or, more specifically, how many people) listen to one stream over another.

# 2467. Re: Amateurs Handle Emergency Comms in Wake of Hurricane Ivan

Newsgroup: rec.radio.broadcasting
Date: 2004-09-29 03:45:15 UTC
From: skelly@crippleneedcane.com
Message-ID: <cjdb4b$b58$1@xuxa.iecc.com>
Source record: 3905
Cross-posted to: rec.radio.broadcasting,rec.radio.shortwave

As residents clean up in the wake of Hurricane Ivan, Tim Skelly Cason, professional musician from Fort Walton Beach, Florida, now in Los Angeles California says:
"My Brother, Ted Cason of the Okaloosa County Sheriff's Dept. has been working with local residents using all types of short wave communications. All communication was lost during and immediately following the storm. Short wave devices became the source of communication within the department and to contact residents around Fort Walton Beach and Destin."
The damaged sustained by Hurricane Ivan will obviously take years to correct. Tim Skelly Cason also said "� after Hurricane Opal, parts of highway 98 were impassable for weeks. Now, Hurricane Ivan has re-opened the wounds left by Opal and is a stark reminder of the power of mother nature's fury!"
Tim Skelly Cason, former bassist of the band Cripple Need Cane also went on to say,
"People in California and other parts of the nation that don't have experience with hurricanes have no idea how it all happens. The worst part is the water surge up from the Gulf of Mexico. This 'storm surge' brings excessive high-tides and waves about 10 times their normal size, and in a place that gets 2 foot waves on average, a 10 to 15 foot wave on top of an already high tide, causes extreme changes to the coastline and any structures in it's path."
Tim Skelly Cason, will be appearing in New York City at the Bass Player Live event sponsored by Bass Player Magazine, Saturday and Sunday, October 16 and 17 to demonstrate products for Roland, the largest musical instrument manufacturer in the world. During his stay in Manhattan he will use short wave radio to communicate to his companions. Tim Skelly Cason is an electronics engineer as well and went on to say,
"After 911, (September 11th,) I'll be a lot more prone to carry a short wave walkie-talkie when I'm in the city. I'm glad we have this old technology to fall back on. It's in many ways superior to all the hype and hoopla of modern digital communication devices."
You can read more from Tim Skelly Cason, former Bassist for the band Cripple Need Cane, at http://www.timcason.com

Not directly from an XM receiver, because there are no data transmitting
circuits.

Unless you are in a major market with huge numbers, dominate the
market I would think you're very lucky to have a contract in the radio
business today.
In a personal service contract what is expected of you,time on air,
sales calls, recorded spots on other shows , personal appearances what
you expect from the company, salary, vacation time, health plan...your
escape clause, their escape clause, how they will promote you
etc....maybe a car, or gas card, expense account to mingle with
clients..and what ever you can think of but you must know how far they
will go. The way I did it even though Wm Morris agency represented me,
I did my own contract all the years I worked at KMPC, in LA. The
mistake many make asking for $25,000 increase and finish up with
$5500.00. I would ask for say 25,000.00 increase and gave them every
reason why I should get that much, how much money I bring into the
station, when you come up with the numbers, they usually reply...how
do you know that? Well I can read the rate card, I'm a business man
and have a pretty good idea about the business on the station, etc,
etc....Didn't mean to write novel..hope I helped.....roger carroll

I don't see how XM can know what channel you are listening to, unless you
tell them. Receivers do not transmit data anywhere, and they are not
connected to a phone line.

XM would know if you are interested in a premium channel because you are
subscribed to it.

> Limbaugh would be closer to their center. When
> you average over the whole USA, as represented in
> Congress, Fox is centrist.

By that logic, then, a cool day on Venus would be somewhere around 350C, rather than 400C.

You can't measure the centre based on the average of a pre-selected group. Left/right, when considering politics, can be easily determined in a vacuum if you look at the policies and values of each group. Conservatives view the world as entirely self-actuated, self-rewarded and assumed risk at the individual level. Facism extends this concept to business, where the relationship between government and business is distinctly favoured over individual rights. Socialists and, going further, communists (and not the Soviet kind) view the world as mutually-actuated, mutually-shared rewards and mutually-shared risk. By that measure, Congress is distinctly conservative, FOX News is clearly right-wing, and we're all going to hell.

CBS, as is the case for all legitimate news organisations, is better at covering a story with balance and provides opportunities to hear opposing views. FOX exhibits no such behaviour. And Steve is right.

# 2474. That Radio Sound - Compression & Limiting

Newsgroup: rec.radio.broadcasting
Date: 2004-09-30 02:25:57 UTC
From: Brian <brpeter@moonlink.net>
Message-ID: <cjfqrl$put$1@xuxa.iecc.com>
Source record: 3916

I don't know whether I'm asking for something you folks consider industry trade secrets, but could somebody explain to me how that big, boomy, bright, full "radio sound" is achieved?

My ears love uncompressed music as much as the next audiophile's, but under some circumstances, like while driving and listening to my compilation CD-Rs, FM radio-style compression is preferable. Moreover, some tracks simply sound magical with that compressed, booming radio sound -- think "Cruisin'" by Smokey Robinson. :-)

So, sitting in the company of CEP 2.0's hard limiter and dynamics processing functions here at home, I'm wondering if that kind of sound can be duplicated, or at least closely immitated, in my livingroom.

It should be stated that while I've never set foot inside a real radio studio, I have a fair understanding of how this processing works from lots of reading and a technically-oriented mind. I.e., what compression/expansion do as opposed to hard limiting, how thresholds and ratios and compensation gain relate to them, the roles attack, release, and lookahead times play in affecting the punchyness in the output, the fact that everything above happens independently yet simultaneously to different frequency ranges (multi-band compression) which partly overlap (crossover?), etc. I just lack the expertise and experience real engineers have to make all those things work in harmony to produce a true "radio" sound without breathing and pumping. <g> That's why I'm here.

At <http://www.snpp.com/staff/brian/drc/>, I've uploaded a few GIFs showing the DRP options offered by CEP 2.0. While genuine multi-band DRP is not possible in this program, it does permit you to define the low and high frequency cutoffs for each DRP action. Theoretically, then, it should be possible for me to achieve "multi-band" compression by performing DRP in multiple passes, once for each band.

Anyone have any hints on where I might start? Like tips on what compression/expansion ratios, thresholds, compensation/output/input gains, and attack/release/lookahead times are best applied to each band, etc., if I could achieve something like the sound that well-engineered classic rock/oldies/pop/new age stations exhibit (big, booming, and larger than life -- but not *totally* dead dynamically, like soft rock stations engineered to be heard through alarm clock radios)? Of course, I realize that beggars can't be choosy. :-)

I'd really appreciate any pointers this group might have.

P.S. - Something I'm vastly ignorant of is where the low & high cutoff points fall for each band in the multi-band compressors used by most stations -- as well as how MANY bands they usually have to begin with, and by how many Hz/kHz they usually overlap (crossover?). Info here would likewise be very much appreciated.

Brian

Note - Scottmuni.com does not have the story yet but it has audio clips.

http://1010wins.com/topstories/winstopstories_story_273123427.html

Sep 29, 2004 12:28 pm US/Eastern
(1010 WINS) (NEW YORK) Disc Jockey and radio personality Scott Muni has died. He was 74. The announcement was made by Clear Channel Radio - which owns Q-104 FM where Muni worked most recently.

Muni began in New York City radio on WMCA in the late 1950s as one of the "Good Guys" in the competitive Top 40 radio wars. In 1960 he brought his gravelly voice to WABC for four years and then he was heard on WOR.

But he realized his biggest following on WNEW-FM radio, which played alternative rock music and introduced many of the new rock groups to the public.

He worked at WNEW-FM from late 1967 to 1998.

You are joking. CBS NEVER presents the conservative point of view.
It ALWAYS treats subjects from the left wing viewpoint. It is true
that very occasionally they ask a conservative to utter words ...
but they actually treat the news and also "features" from a left
wing viewpoint. They do NOT cover stories with balance.

If you think they do, you are a severe liberal.

You cannot be a balanced news organization without covering
stories that are interesting and held close to the heart of
conservatives, such as the right to life for unborn children,
treating them as being the right side. CBS may talk about
right wing subjects ... BUT THEY ASSUME THAT THE LEFT WING
POSITION ON THE ISSUE IS THE CORRECT ONE.

And have you EVER heard CBS breaking a big story attacking
Kerry with forged documents?

You can't forget the classic:

Anchor: K-Y-W newstime...
FX: BOOP
Anchor: ...XXX o'clock.
Stentorian Announcer Voice: All news, all the time.
Jingle singers: K-Y-W, Newsradio, 10-60
S.A.V.: From Independence Mall, this is News Radio, K-Y-W Philadelphia,
10-60 on your dial, a Group W Westinghouse Broadcasting
Station, serving Pennsylvania, New Jersey, and Delaware, in
A-M stereo.

<http://audio.bostonradio.org/98caaabd-b353-11d8-9fd3-00904703287b.ogg>

IIRC, Mr. Stentorian Announcer Voice, the long-time imaging voice of
KYW radio and television, died this year. Not quite Jim Clancy, but
great pipes nonetheless.

All of the WINS IDs I've heard (in the modern era, anyway) were read
by the outgoing news anchor. In market #1 the station which had the
most presence in its legal ID was WCBS, as witness
<http://audio.bostonradio.org/1ad39f32-af7f-11d8-9fd3-00904703287b.ogg>.
(Other CBS all-newsers of the mid-90s tended to jingle.)

Unfortunately most all-news and news-talk stations these days seem to
think it's "undignified" to jingle, although I'm told KFBK in
Sacramento
(<http://audio.bostonradio.org/8d336817-aecb-11d8-9fd3-00904703287b.ogg>,
recorded in 1997) is still an exception, as is Milwaukee's heritage
WTMJ:
<http://audio.bostonradio.org/151300c9-d2fb-11d8-b318-00904703287b.ogg>.

One of my current AM favorites (in no small part because the jock is a
friend of mine) is this one from suburban Pittsburgh:

<http://audio.bostonradio.org/5e05f288-0f32-11d9-8341-00904703287b.ogg>

Other AM IDs I like:

WGAN: <http://audio.bostonradio.org/a725990d-b9b8-11d8-a5c8-00a0cc584130.ogg>

You know, I think I might still have a dub of the jingle package that KDKA ran in that period. Or was it the electronic one in the several years before? Not that you'd know...just muttering to myself. I may even have the 15ips master for the electronic set, having dubbed it also before I took them both, as I didn't have a 15ips reproducer at home. I'm remembering jock shouts, too.

I'll have to look. I'd imagine that there would be a few people here who would be interested in what I find. Nostalgia, however, isn't what it used to be.

Yes, RDS uses an inaudible subcarrier, but it doesn't affect your
ability to hear the normal program audio.

A data signal at 57KHz is mixed with the station's normal music/voice
program. Both signals are broadcast at the same time.

At the receiver, filters prevent the 57KHz RDS data signal from reaching
the speakers. (even if they didn't, you can't hear 57KHz) If the
receiver supports RDS, another filter prevents the music/voice program
from reaching the RDS decoder.

=====

Here in the USA, RDS is generally used to display the name of the
station on the front of the radio, so that the listener always knows
what station they're tuned to. RDS will also often display the name of
the song the station is broadcasting and who's singing it.

There are other things RDS *can* do. It can tell your radio alternative
frequencies - if a station has multiple transmitters, you can
automatically select the strongest signal. It can automatically tune
your radio to a station that's broadcasting emergency information.
These applications are not common in the USA but I understand they are
common in Europe.

What a nice little diversion in abstracts. How about looking at the real example. Dan Rather was already under the glare of international spotlights after it was apparent to everyone that his newly discovered documents were very likely forged. If not forged, it was unquestionable that they received very little proper scrutiny, nor did the source of the documents. So, what does he do? How does he then try to correct this error? He goes back on 60 mins again claiming the story is true, even if the documents are false. He brings out the 84 year old former air national guard secretary that worked for Bush's now deceased superior officer, with her 30+ year old recollection of events. One of the very first questions he then asks is if she believed President Bush got into the ANG through influence. She answers "Yes, I do. I've always felt that way." End of questioning by Rather. No follow up. Even a junior reporter from a third rate paper interested in the truth would have asked "What do you base that on? What evidence did you see?" Better than that, they never would ask a question about how she "feels", they would have asked for facts. This is a prime and current example of the bias at CBS. And, in this case, already being under intense scrutiny, no one can claim it was a mere oversight.

Then, we have the fact that CBS called the Kerry campaign and requested they contact the 60 mins source for the forged documents. Joe Lockhart admits he was contacted and then did talk to the guy. This is unbiased journalism?

And of course, if CBS wanted a fair presentation in either this or the original 60 mins story, they had plenty of opposing witnesses available to be heard. The wife and son of Bush's supperior officer both have said they know what he had said to them about Bush, and it was all favorable. Yet, we didn't hear from either them or any other

source with opposing information.

As for FOX being so right wing, I believe the previous poster is correct. They are a lot closer to the mainstream American than Dan Rather, Michael Moore, or George Soros. And that explains why they are thriving and the attempts at liberal shows just went by the wayside. Anyone remember how long Phil Donohue lasted with his show on MSNBC?

The only question left is how long until they fire Dan Rather. With ratings impacted, CBS must be left wondering who will be left watching Rather's coverage of election night. I wouldn't be surprised to see CBS tell him they won't let him cover it, which would also be a convenient way to get him to quit.

RDS is modulated onto a 57Khz ubcarrier and has a bandwidth of about 2.5Khz
- can you hear 54Khz (Not very likely)?
This signal is then added to the MPX stereo signal before feeding the
transmitter.

> If

I have a software based stereo and RDS encoder on my website (needs Linux,
Jack, liblo & a compatable 192Khz soundcard). The source is there so grab a
CVS client and feel free to study it.

Has anyone ever offered CBS forged documents which attack Kerry? CBS does in
fact air GOP sponsored commercials which are full of forged interpretations
of Kerry's politics.

Source record: 3932

Fri, Oct. 01, 2004
Associated Press

Fortuna, Calif. - Jean Ruth Hay, who woke millions of American troops each morning during World War II with her upbeat radio program "Reveille With Beverly," which was broadcast into foxholes, cockpits and military outposts from Alaska to New Zealand, has died. She was 87.

Hay, a resident of Fortuna, a small community on the Eel River in Northern California, died Sept. 18 after suffering a stroke while gardening, her son Bob said.

"She was a really strong, fascinating woman," Bob, 50, said. "To do everything she did in a lifetime is amazing ... and she did it all at a time when women weren't usually in the spotlight."

Between 1941 and 1944, Hay's dawn broadcast as the effervescent Beverly reached an estimated 11 million people. Her jumpin', jivin' selections - Benny Goodman, Artie Shaw, Duke Ellington and Nat King Cole - were a welcome alternative to the 5:30 a.m. bugler's blast that jarred American troops from their beds in military outposts across the globe.

With a cold Coca-Cola in one hand and a stack of records in the other, Hay's day at Hollywood's station KNX-AM began with her signature opening, "Hi there, boys of the USA."

"We're ready with the stuff that makes you swing and sway," she would croon.

Called the world's first global disc jockey, her programs reached servicemen in 54 countries. Some saw her as the American counterbalance to the Pacific theater's "Tokyo Rose," who was actually an amalgam of several young women in Japan airing anti-American propaganda.

Hay posed for pinup shots and was voted by troops, "The girl we'd most like to be trapped in the turret of a B-17 with."

Born in Philadelphia, Hay got her start in radio in 1941. The University of Colorado graduate had heard soldiers at Fort Logan complain of starting their days to the blast of a bugle.

As she told the story, she went to the manager of Denver radio station KFEL and pitched her idea to "let the guys police their barracks to the beat of the band of the king of swing" - with her as disc jockey. She called herself Beverly because it "sort of rhymed" with reveille.

Her morning show debuted on Oct. 20, 1941 and was an immediate success.

After being featured in Time and Life magazines in 1942, she was offered a job in Hollywood at a CBS affiliate. Armed Forces Radio Service broadcast her show overseas after America entered the war, along with a shorter program she hosted called "GI Jive."

Years later, Hay learned that her broadcasts were occasionally used to transmit coded secret information, she said on her Web site. She said she was ordered at times "from on high" to read introductions word-for-word and announce obscure songs such as "Opening Night," "Torpedo Junction" and "I Dug a Ditch."

She married bandleader Freddie Slack in 1945, then divorced three years later. She later married John Hay. She worked after the war with the Santa Barbara-based Direct Relief International, a charity for which she served as chairman and board member.

Hay is survived by her husband of 52 years, three children and a grandson.

Amateur Radio Newsline™ Report 1416 October 1, 2004

Amateur Radio Newsline report number 1416 with a release date of Friday, October 1, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio is ready as Hurricane Jeanne hit Florida. Find out the details on Amateur Radio Newsline report number 1416 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO MEETS HURRICANE JEANNE

Making landfall near Stuart, Florida, early on Sunday, September 26th, Hurricane Jeanne blew across that state with 120 mph wind and drenching rain. News reports say that the storm hurled debris into the air, tore rooftops off buildings and sent monster waves onto the shoreline. And as Jeanne's wrath played out on television screens across the nation, it was the calm voices of ham radio operators of the Voice Over I-P Hurricane Watch Net that signaled it was about to arrive:

--

"At 11 PM, the center of Hurricane Jeanne was located near Latitude 27.2 North and Longitude 80 West, or about 15 miles East of Stuart Florida. Jeanne is moving slightly North of West near 13 Miles Per Hour."

--

Hams also relayed a stark warning from the National Hurricane Center. One that said -- stay out of Jeanne's way:

--

"...with maximum sustained winds of 115 MPH with higher gusts, Hurricane Jeanne is a is a dangerous Catagory 3 hurricane on the Saffer-Simpson Hurricane Scale."

--
Over two million residents had been urged to evacuate. State officials said more than 42,500 stayed at shelters. Many of these were staffed by ham radio operators associated with A-R-E-S and RACES groups.

As Jeanne made her way across Florida, many residents were without telephone service and more than a million people lost power. But ham radio operators using all kinds of emergency power sources were on the air. In fact they were the ones who relayed word of some of the major outages:

--

"KA4EPS in Deerfield Beach passing on some information you might be interested in. Have some numbers passed along by the local utility company. Dade County has 2900 without power. Broward County 71,000 and Palm Beach County 487,000 without power."

"QSL Lou, Thanks."

--

The Category 3 storm became the fourth hurricane to pummel Florida in a single season. The three other hurricanes - Charley, Frances and Ivan - have all hit within the last six weeks. And hams like Paul Goodell, KG4GOQ, in the town of Lake Worth might not have sounded that great through all of the radio links, but he did get the word out:

--

"Estimated winds in excess of 100 miles per hour. Trees bent and laying over."

--

Then for a while there was a period of calm. This as the eye of the storm came ashore. It gave first responders a chance to assess the damage done so far:

--

"KG4YQK at the Port St. Lucie E-O-C W4SLC. We are in the eye of the storm presently. We had sustained winds of well over 110 miles an hour. We received substantial damage here locally. Trees down. Powerlines down. Flooding as well."

hurricanes. As it did, even public service communications took a hit:
--

"Net control is listening. Go ahead Paul:

"I just heard second han that the communications tower for Riviera Beach has collapsed. Probably not something for the national hurricane Center, but just as a note to anyone else out there listening to hear how bad these winds are going."

--

By late morning, Jeanne had weakened to a Category 1 storm with 75-mph top sustained winds, but its 400-mile diameter covered most of

the central part of the state including Tampa and Orlando. As Jeanne proceeded to fall apart while heading North-East over Georgia and the Carolina's she dumped torrential rain and spawned close to a dozen twisters. More on the aftermath of Hurricane Jean in future Amateur Radio Newsline reports. (ARNewsline(tm) with audio from the VoIP Hurricane Watch Net)

**

THE BPL FIGHT: PERTH INTERFERENCE NOT BPL RELATED

A widespread interference problem in Perth, Australia, that sounds like B-P-L has to be something else. This, after the city's Power Authority tells Dennis Muldownie, VK6KAD, that it is not using Broadband Over Powerline technology to monitor its electrical network.

There is now some supposition that noise that wiping out free to air TV channels 2, 7, 9 and 10 may be coming from some home network gear which uses the power mains to connect the various pieces in a home Local Area Network. But the noise is so widespread that it has to be more than one installation causing the problem. This, by radiating back out over the local Perth power grid. (WIA News)

**

THE BPL FIGHT: FCC TO RELEASE R&O ON BPL ROLLOUT

Meanwhile, back at home the ARRL says that an initial Report and Order on the rollout of B-P-L could be on its way out of the FCC this month. Amateur Radio Newsline's Mark Abramowicz, NT3V, has been following the story and has more:

--

The ARRL says that an initial Report and Order on the rollout of B-P-L could be on its way out of the FCC this month. Amateur Radio Newsline's Mark Abramowicz, NT3V has been following the story and has more…

As predicted almost on cue, the Federal Communications Commission appears ready to render its decision on Broadband Over Powerline Internet access.

And despite thousands of comments on the subject, many of them raising concerns about the interference potential of the technology, the ARRL says it has learned the panel is ready to act.

As one high-ranking ARRL official has told Amateur Radio Newsline, it's not a question of whether there will be BPL. There will. The question is in what form will it be rolled out and how effective will the safeguards be to protect other services.

In its recent bulletin, the ARRL advised it had learned the FCC's Office of Engineering and Technology would have its draft order on BPL ready for the commission's Oct. 14 meeting.

The ARRL has mounted a vigorous information campaign to raise awareness about the threat BPL poses. And, it has also tried to lobby at various levels to change some minds about the benefits the BPL industry says the technology will bring.

But it appears, based on the ARRL's BPL bulletin, that the organization is pessimistic about what will be coming out of the FCC's technology arm.

In fact, the ARRL's Chief Executive Officer David Sumner, K1ZZ, in a letter sent as a follow-up to a recent meeting with FCC commissioner Jonathan Adelstein sums up what the League is expecting.

"…the ARRL has no confidence that the draft report and order will be based on sound engineering and believes the rush to adoption is unwarranted and premature. " That excerpt of Sumner's letter from the ARRL's Bulletin.

In interviews with Amateur Radio Newsline, ARRL President Jim Haynie W5JBP says there was little doubt in his mind the issue would be decided BEFORE the presidential election. Haynie contends the issue is being driven by business interests who have the ear of the president and his technology advisors.

Haynie has told Amateur Radio Newsline of his concerns about the FCC's apparent lack of interest in following up on the many pending BPL complaints - filed as a result of system tests. He has told us he fears when the commission finally acts, it may bow to BPL interests that are seeking to weaken the impact of any interference complaints.

So the question many amateurs may be asking themselves as we await the FCC's order is where will this leave me? Is it time to put my radios up on Ebay and turn my focus to my computer and EchoLink?

The answer: Not so fast!

The National Telecommunications and Information Administration still has a card or two to play. Its technical people have raised interference issues and are continuing studies and plan to release more results in the next several months.

Will the FCC wait for the NTIA? Will the FCC table BPL? Not likely to both. Is there room for an appeal of any FCC BPL decision? If so, it would likely wind up tied up in the federal courts.

With the planned rollout out of Wireless Internet access here in Philadelphia and other cities across the nation, do the economics dictate a utility recovering its investment in BPL technology at a pace investors are willing to wait?

The questions are many and the debate is likely to continue for the next several days.

>From our perspective, it seems unlikely the FCC decision - if it goes against amateur radio interests - will stand without a challenge. Too much time and talent has been invested in preparing the data showing what BPL can do to the amateur frequencies and our ability to operate.

We'll stay on top of it for you. And, once the FCC order arrives, we'll have the first reaction and what it will mean to you.

Stay tuned!

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

More on the B-P-L issue in future Amateur Radio Newsline reports. (ARNewsline(tm, ARRL)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Rio Hondo Amateur Radio Club net serving our home town of Los Angeles California.

(5 sec pause here)

**

THE BPL FIGHT: BPL COMES TO CENTRAL VIRGINIA

Still with news on the B-P-L front, Charles Rivelle, K3FT, has some news about one electric company's future. He says over QRZ.com that the Central Virginia Electric Cooperative has completed testing of its B-P-L system in Nelson County and the company is now serving customers on 40 miles of operational lines.

The K3FT posting provides a link to a two-page advertisement that has been sent to thousands of customers throughout central Virginia. The ad alerts them to look forward to B-P-L service in the area noting that line crews are now installing the equipment needed to deliver Broadband over Powerline services. Up to 4000 homes and businesses will be eligible to participate in the first phase of this program. Central Virginia Electric Cooperative says its "always on" 256 kilobaud per second broadband connection is priced at a very competitive $29.95 a month.

Check this web site for details: http://www.forcvec.com/bplcoop/ (K3FT via QRZ.COM)

**

THE INTERNET: US FALLING BEHIND IN BROADBAND ROLLOUT

Meantime, the FCC insists that the United States is making progress in rolling out high-speed Internet service. This, despite facts showing that the nation is falling further behind other countries.

A new Federal Communications Commission report found that U.S. high-speed Internet lines had tripled to 28.2 million by the end of 2003 from June 2001, but the country at best was 10th place in international rankings down from fourth, lagging nations like Canada and South Korea.

FCC Commissioner Michael Copps criticized his own agency over the disappointing news. He says that the agency had failed to establish a coherent policy for broadband, sacrificing the nation's rank. Copps also noted that service was as cheap as $10 a month in Japan for 8 megabits a second versus $30-$50 for 1-3 megabits in the United States. (Published news reports)

**

CHANGING OF THE GUARD: STAN BURGHARDT, W0IT - S.K.

The changing of the guard in ham radio continues with word of the passing of two well known radio amateurs. The ARRL Letter reports that Stan Burghardt, W0IT of Watertown, South Dakota, died on August 22nd at age 93. Burghardt was the founder of Burghardt Radio Supply Inc. which is now known as the Burghardt Amateur Center. He was first licensed in 1931 as W9BJV and became W0BJV in 1946. Burghardt remained active on the air -- especially on 6 meters -- until his death. (ARRL)

**

CHANGING OF THE GUARD: ROGER BAKER, G4IDE - S.K.

And ham radio software writer Roger Barker, G4IDE, has passed away. Baker died on September 9th following a long bout with cancer. Baker was the author of UI View, PSK31SRV and a host of other digital mode software and was recently named as the first recipient of the 'Lifetime Achievement Award' by the Tucson Amateur Packet Radio for his services to digital communications.

Baker's packet radio program Winpack is currently in use by tens of thousands of radio amateurs around the world, while his UI View program is now considered to be the benchmark by which all other APRS Raster Mapping software is compared. (KB7TBT, G3ZHI, others)

**

ENFORCEMENT: KEEP OFF 10 METERS

The FCC has written to five trucking and transport companies warning them to keep their drivers from operating radio gear on 10 meters.

The letters went to Con Way CWX Trucking of Long Beach, California; Dowell Express, Inc. of Lavonia, Georgia; K & K Cartage, Inc. in Sunbury, Pennsylvania; Teeberry Trucking LLC whose home base is Charlotte, North Carolina and United Van Lines of Fenton, Missouri. Divers for these companies were heard operating radio gear without licenses on 28.085, 28.115 and 28.215 MHz

Each letter carries a stern warning that continued operation could lead to confiscation of the radio gear as well as a prison term and a hefty fine and for the unlicensed radio operator. These monetary forfeitures normally range from $7,500 to $10,000. (FCC)

**

ENFORCEMENT: A DEAL A PIRATE COULD'T REFUSE

And there appears to be two ways to get someone to stop rebroacasting your radio station. You can complain to the FCC or you can take another and apparently much quicker route that one station has. Norm Seeley, KI7UP, explains the unique and effective approach:

--

An unlicensed broadcaster is off the air in San Diegio, California. This, after a licensed broadcaster in San Clemente kind of took matters into its own hands and made the pirate a deal he could not refuse. Legally speaking that is.

When KWVE was recently advised that its signal was being rebroadcast by apparently unauthorized translator station in Lakeside, California, the station dcided to act. Rather than wait for the FCC to investigate and politely ask the pirate to cease and desist, representatives of KWVE paid the party a visit. The station also threatened in writing to seek legal injunction if the unauthorized rebroadcasts continued.

And you can call this approach as being very effective. The translator fell silent in short order and has not been heard since.

--

While this system is seemingly a lot faster it also means having to hire a lawyer and pay his fee. (CGC)

RESCUE RADIO: FCC PARTICIPATES IN COUNCIL ON EMERGENCY PREPAREDNESS AND INDIVIDUALS WITH DISABILITIES

The FCC has participated in the first meeting of the Interagency Coordinating Council on Emergency Preparedness and Individuals with Disabilities. This, at the Department of Homeland Security in Washington D.C..

The FCC was represented by K. Dane Snowden, the chief of the FCC's Consumer & Governmental Affairs Bureau. At the meeting, Snowden

announced that the FCC has issued policies and will launch outreach efforts. This, to ensure that facilities that provide telecommunications relay services for persons with hearing and speech disabilities are designated priority for restoration of service in cases of emergency. Snowden also described a rulemaking by the FCC to improve the emergency alert system to make it more accessible for people with disabilities.

The Interagency Coordinating Council on Emergency Preparedness and Individuals with Disabilities was established by Executive Order on July 22nd. Its purpose is to address the safety and security needs of people with disabilities. (FCC)

HAM RADIO ON THE INTERNET: BIG DATABASE UPGRADE AT QRZ.COM

The QRZ.com website call sign system is running a lot faster these. This as the result of a major an upgrade to a new and more powerful server.

The new database engine is a Sun E280R. This is a 64-bit industrial strength machine with dual 900 MHz processors, 4 GB of RAM, and a pair of 36 gigabyte 10,000 R-P-M Fibre channel disk drives.

Fred Lloyd who runs QRZ.com says that these new disks are really impressive. Fred says that he has clocked them at speeds of up to 64 megabytes per second. That equates to an entire C D ROM's worth of data being moved internally in only 10 seconds.

Lloyd adds that this new server only handles the call sign database. The main QRZ.com web server remains a 450 MHz Sun E420R with 2 gigabytes of RAM. (QRZ.com)

ARNEWSLINE(TM) SUPPORT FUND REPORT WITH N6TCQ

Audio report only: Hear it at www.arnewsline.org

**

RADIO HERITAGE: NAVY TO CLOSE SUB COMM CENTERS

The United States Navy says that it will dismantle two extremely low frequency radio transmission centers used to communicate with submerged submarines. The Navy says that the 400-million submarine-communications system, which has been in use since 1989, is outdated and no longer needed.

Two transmitter sites are involved. One is in northern Wisconsin and the other in Michigan. They will go out of service on September 30th but could take up to three years to disassemble and close down permanently.

Each system consists of a transmitter and an antenna strung on 600 12 meter high poles. The navy has used these extremely low frequency transmitters to maintain secure communications with submarines at sea but now will use 12 smaller transmitters, sited worldwide. (Pulished reports)

**

HAM RADIO IN SPACE: ISS REPEATER ON AGAIN

The FM Repeater and BBS on board the International Space Station was again open for general ham radio contacts on September 27th and 28th. During that time voice contacts were available on by transmitting up to the I-S-S on 145.920 MHz with a 67 Hz CTCSS tone while listening for replies on 435.300 MHz. The Bulletin Board used an uplink of 145.860 F-M and a downlink at 435.150 MHz. This operation was followed by a PSK-31 Experimenters Wednesday Test on September 29th.

The system will be on periodically and ARISS will announce the dates and times in advance. Check with the I-S-S Fan Club web page at www.issfanclub.comto see what the latest status is.

Also, keep in mind that the radios on board the space station are not able to correct for Doppler as the frequencies are channelized. It

is up to the ground station to do the Doppler correction. For 2 meters, the Doppler shift is about +3kHz at the beginning and goes to about -3kHz at the end. For 70 cm, the Doppler is about +10kHz at the beginning and goes to about -10kHz at the end.

The 70cm Doppler is roughly 3 times the 2m Doppler. Many of the tracking programs have the ability to calculate the frequency shift. (ARISS)

**

HAM RADIO IN SPACE: MIKE FINCKE ON THE AIR

And as his time on board the I-S-S begins to wind down ham astronaut Mike Fincke, KE5AIT, has been on the air quite a bit. Not only to talk to school students in pre-scheduled contacts, but also to any ham who wants to chat a bit. One of those who had the opportunity to talk recently with the intrepid space traveler is Scott Avery, WA6LIE, in Salinas, California, who had had his recorder running:

--

Contact audio here. Hear it at www.arnewsline.org

--

Scott says that his QSO with KE5AIT space mobile took place at about O2:15 on September 28th. Needless to say that signals were 5 by 9 and full quieting both ways.

Fincke and Commander Gennady Padalka, RN3DT will be finishing their tour of duty on the ISS in the middle of October. They will be replaced by Expedition 10 Astronaut Leroy Chiao, KE5BRW, and Cosmonaut Salizhan Sharipov. WA6LIE's full contact with the I-S-S can be heard on line at www.qsl.net/wa6lie (WA6LIE)
**

DX

In D-X word that Crete will be coming on the air in October. This as SV9FBM and SV9FBZ become active as active as SY9Y in the CQ World Wide DX SSB Contest on the 30th and 31st as a Multi- Single entry. QSL to Stelios Aggelakis, P.O.Box 113, GR 72200 Ierapetra, Crete Island, Greece. (OPDX)

And EA1QF and EB1AA will be on the air from Cuba from October 12th to the 25th. The pair will be working on a "Radiosolidarity" project, but will also be operational on the H-F bands from several station locations as T42R. QSL to EA4URE at his callbook address. (GB2RS)

**

THAT FINAL ITEM: THE ARDF REPORT

What do Burrowing Owls and 80-meter transmitters have in common? They are both targets of hams who like to do radio direction finding. Newsline's Joe Moell K0OV tells us more:

--

There's lots happening in the world of radio direction finding this summer. More young Burrowing Owls are leaving their nests in western Florida, so hams in that state who aren't busy with hurricane communications are by their receivers, listening for the radio tag signals to see where these critters will go. If you can help, please join them -- I'll tell you how in a moment.

Also, a 21-member delegation of ARDF Team USA competitors, trainers, jurors, and family members went to the Czech Republic and the World Championships of radio foxhunting, September 7th through the 12th. These World ARDF Championships take place every two years. USA's 2004 team members were OMs and YLs ranging in age from 19 to 62. Among them was Jay Thompson W6JAY, Newsline's Young Ham of the Year for 2003 and recent winner of the ARRL Hiram Percy Maxim Award. Each competed once on 80 meters and once on two meters, looking for three, four or five transmitters, depending on age and gender category.

USA began attending the World Championships in 1998, but European and former Soviet countries have been holding ARDF events for over 30 years. So it's no surprise that they dominated in the final standings. Nine of these nations garnered all of the individual and team medals. The total medal count was led by Czech, Russia, and Ukraine with 34, 28 and 26 respectively.

USA, Australia, and Great Britain were among the 19 nations that won no medals. But we're getting better every year. Two Team USA members had top-ten individual finishes in their categories. Nadia Scharlau of Cary, NC took 6th place out of 22 on two meters. She might have won a medal on 80 meters, but the battery fell out of her receiver and she had to find the last fox transmitter with just the bearings that she already had on her map, losing about ten minutes. Bob Cooley KF6VSE, age 62, of Pleasanton, CA placed 9th out of 34 on his two-meter run.

All of our team members earned their spots by taking medals in the USA National Championships. This year's were in California in June, and a site is already being sought for the national championships in 2005, 2006 and beyond. As USA's ARDF Coordinator, I would like to hear from you if your club is interested in putting on the championships.

You can read all about the ARDF championships, Team USA, and volunteer wildlife tracking -- and find out how to get involved -- at the usual place, www.homingin.com. That's homingin, as one word, homingin.com.

>From southern California, this is Joe Moell K-zero-Oscar-Victor, for Amateur Radio Newsline.

--

Again, that website Joe mentioned is www.homingin.com. And homingin is one word. (K0OV, ARNewsline(tm))

He had a good point. They had plenty of other evidence to base a story on, and they weren't the only ones. Unfortunately, the Republicans have managed to, once again, to distract attention from the real issue: that Bush inappropriately pulled strings to get into the National Guard ahead of hundreds, if not thousands, of other candidates, that Bush inappropriately managed to get assigned to a base with no aircraft or flight personnel so he could work on a political campaign instead of serving his country, that Bush refuesed a direct order to take a physical exam (which, for the first time, included a drug test that would have detected the cocaine use he was appearantly arrested for in 1974, about which not only are there strong, if so far unsubstantiated, rumors, but also something that Bush to this day refuses to comment on, though he freely claims he hasn't used drugs AFTER 1974; plus, Bush had already lied publicly when he claimed he hadn't been arrested since 1968, though it was later discovered he'd been arrested for drunk driving in Maine; his highly-unusual move as Texas governor to change his driver's license number and have all the records relating to the old one destroyed may for all time erase the evidence trail needed to prove other legal difficulties in Texas, but he didn't have such pull in Maine), resulting in his grounding and failure to report for duty until he managed to get an early discharge before his next scheduled physical was due.

There is more than enough evidence to strongly confirm all, or nearly all, of the above. Why is CBS's making use of one document (among many), that appears to be a reconstruction of the contents of a document that was likely intentionally destroyed by Bush staffers in an effort to cover up the information it contained, a more important story than the true story of Bush's service record? I am by no means condoning CBS for making use of this document without clearly labelling it as a reconstruction of the content of another document that is NOT in their posession, but is that really one of the most important issues in America right now? I mean, we have lost well over a thousand soldiers in Iraq and Afghanistan, both places with a security and economic situation that is worsening, not improving. We are

fighting terrorism, but the Bush administration has dragged their heels to even implement the program the Clinton administration already had in place (the financial controls, bombing and special forces in Afghanistan, arresting known terrorist cells, etc. rollback of Al Qaida that happened after 9/11, which was presented to Condi Rice et al during the transition along with the admonition that terrorism, and Al Qaida in particular, would be their most pressing national security issue, then promptly filed away), as well as helping the terrorists in their recruiting efforts with the ill-advised Iraq war and its heavy-handed and poorly planned follow-up, AND protecting the Saudi Arabian government and royalty (including spiriting many of them out of the country despite no-fly rules and without questioning, in the days after 9/11), which have funded and supported the terrorists and their message and who were in fact aware that a major attack was scheduled to occur on American soil on September 11, due to the lucrative oil relationship that exists between the Saudis and the Republican aristocracy. We have pissed away the budget surplus we worked so hard to build over the previous decade, increased the already-bad income inequality that exists in our country, cut funding for every worthwhile program imaginable (so that the rich could get even more tax breaks), and curtailed our citizens' civil liberties (while allowing corporations to run roughshod over the helpless populace), we are far less trusted and liked around the world than at any time in history, and the Bush administration has lied about all of it from beginning to end. So, as we now approach an election to determine the world's most powerful man and whether to make all of these things far worse or to start trying to make them better, and all people can talk about is whether Dan Rather should be fired over one lousy questionable document (questionable, even though its contents appear to be true and accurate)???

> And of course, if CBS wanted a fair presentation in either this or the

When was the last time you heard the family members or neighbors of a serial murderer say "but he's always been such a nice guy, I can't IMAGINE him ever doing such a thing"?

> As for FOX being so right wing, I believe the previous poster is
> correct. They are a lot closer to the mainstream American than Dan
> Rather, Michael Moore, or George Soros.

I'm not sure how to put this in language simple enough for you to understand, but I'll try: you are wrong. There is copious evidence to show that the mainstream media is most likely more CONSERVATIVE than the general public, not more liberal (including the evidence that is so frequently mis-quoted by conservatives to "prove" that journalists are more liberal than the general public: that 18-year old data did indeed show that reporters were more liberal -- on social issues, but they were more

conservative on economic and other issues. Furthermore, the editors and owners of the media turn out to be far more conservative than the reporters themselves).

> And that explains why they
> are thriving and the attempts at liberal shows just went by the
> wayside. Anyone remember how long Phil Donohue lasted with his show

> Rather's coverage of election night. I wouldn't be surprised to see
> CBS tell him they won't let him cover it, which would also be a
> convenient way to get him to quit.

You've hit the nail right on the head: there is virtually no actual, (relatively) impartial, informative news reporting on TV anymore: it's all just entertainment to get ratings (and hence advertising dollars). It turns out that insultingly angry right-wing shouting about sex and other scandals is more entertaining to the average couch potato than reasoned debate about real issues, or liberal moaning about such inconsequentials as the environment, poverty, education, or whatever other silly thing they're moaning about (so Jerry Springer is more popular than C-SPAN; what does that prove?). Conservatives have learned how to put on a good show and keep an audience hooked.

HDTV in developing nations : Fiji : an excellent way to provide broadband telecom services ...

Using DVB-T transmission technology it would be trivial (over the long run) to provide TV1, as well as Fiji's 2 radio networks via thin DTV subchannels.

The remaining capacity could be allocated to Internet capacity, and during daylight hours -- a 24 hr news station featuring news from Australia, NZ and parts of the world where the tourists come from.

The Internet capacity could provide a good source of revenue for the state broadcaster.

SKY in Fiji could take its time to convert to DVB-T, mainly waiting for proper (sim card compatable) subscription technology to emerge for DVB-T.

## 2495. AM Stations Antenna Patterns

Go to your local station and ask to look in the public inspection file.
There should be one there. If you ask the engineer nicely (and they are
a station that still has an engineer), he might also have some old proofs
so you can see how widely the pattern varies from year to year.

Be aware that the plot for a 50KW station on a stick in Montana will be
radically different than the plot for the same transmitter and tower in
Arizona. Which is what makes it fun.

Do you want antenna pattern or station's coverage?

Pattern is easy. There are a number of on-line sources including the FCC's AMQUERY. You can also download the whole AM database and display patterns in my AMSTNS program available (with very recent data) from http://home.earthlink.net/~lvehorn/

Coverage is hard, since interference from other stations is involved - a simple field strength prediction is not adequate. The only RELIABLE source I know for interference-free coverage is to look up the station's actual application on the FCC's AMQUERY.

www.radio-locator.com

Note that the maps are careful labeled "for entertainment purposes." They
are not totally accurate,a nd very,very, very exaggerated. On AM, the only
useful contour is the innermost circle... and it is actually bigger than
reliable reception areas really are in most cases. The outer two circles are
totally meaningless.

This only assumes you are in the US, one of few places where "major" and
"50,000 watt" are synonymous.

Since I'm the one who runs the site mentioned above
(www.philaradio.com), I would appreciate it if YOU got YOUR facts
straight.

The description mentioned above (retired and living in Concord, CA.)
is the ONLY thing it says on Dr. Don's description. The info on the
site is NOT "conflicting and out of date" and I would appreciate it if
you would refrain from casting untrue and insulting dispersions.

We get quite a bit of our info from site vistors. We verify it as
best we can. However, checking on people who have been out of the biz
and "out of touch" for several years can be difficult at best. We do
the best we can with the limited resources we have. Remember, it's a
FREE site and we derive nothing from it other than the pleasure of
doing it and sharing some memories of (IMHO) some of the best radio
ever created.

Again, I would greatly appreciate your refraining from making
insulting and untrue remarks.

Regards,
Kris Earl Phillips

> > a major (50,000 watt) commercial broadcast station?
>
> www.radiolocator.com (where you'll find it, and any other AM station in
the US and
> Canada)

---

The contours shown on Radiolocator.com are based BOTH on the radiation pattern of the transmit antenna system, and ground conductivity along various radials for 360° around the transmit site.

If conductivity was a constant throughout the groundwave coverage area of the station (almost never happens), then from the "patterns" on Radiolocator - to the extent they are accurate - you could calculate the actual shape of the transmit antenna radiation pattern, remembering that field strength changes as the square root of changes in radiated power.

Hi!
On http://www.eupolitix.com/EN/Legislation/200305/979dcc8f-93ee-4b61-8daf-2ec2cbba7667.htm you`ll find the information that COM/2002/759 "electromagnetic compatibility" is currently discussed by the european parliament - without beeing noticed by the public. As the introduction is a very serious danger for our hobbies ham radio and shortwave listening there's an urgent need to do something...
The german ham radio society DARC just called all radio amateurs to write a letter to their state's representative(s) at the european parliament (german sample text at: www.darc.de/aktuell/plc )
I think that this action would be more impressive if all european shortwave users would do the same - write to your local representatives explaining to them the importance of undisturbed shortwave reception and the appling international laws (ITU regulations, etc.).

You should distribute and share this idea with other interested groups - tell it local cb clubs or your countries amateur radio society.

And finally: write to your representative who's adress could be found at http://www.europarl.eu.int/whoswho/default.htm

Y'know, that's where I was going to send him, but...

The patterns *aren't* there.

OK, there's a table that shows the relative field every (5? 10?) degrees
of azimuth, and I suppose you could plot it yourself.

For FM and TV stations, they *do* have the DA patterns...

I usually use Bob Carpenter's AMSTNS program.

>www.radiolocator.com

Come on, Bob. You should know better than that. Radio-locator.com's maps are clearly labeled "This image is intended solely for entertainment purposes," and quite frankly belong in the funny papers, since they bear no resemblance whatsoever to either the FCC-approved directional pattern or any sort of real-world coverage (even though the program's coder claims they're drawn using FCC data).

R.J. Carpenter's AMSTNS and TVFMSTNS programs are the real McCoy, since they plot the patterns directly from the FCC data, and they're the only programs I know of with such information that are updated periodically. Even though they're DOS programs, they run just fine on the versions of Windows that only have DOS emulators (i.e., NT, 2000 and XP).

WPYT 660 Pittsburgh powered up at 6:30 EDST this morning, wiping out
WFAN reception in Central Ohio. Last month they were powering up
at 7:00.

I see last month's official sunrise there was 6:00 EST (nb not EDST)
this month's is 6:30 EST (not EDST)

Apparently they're not converting to EDST this month.

Who do I complain to, so that I can hear Imus again, instead of this
wretched overnight program?

Naturally there's no website or phone number.

# 2517. Radio call letters: What do they mean?

Newsgroup: rec.radio.broadcasting
Date: 2004-10-05 02:48:22 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cjt21m$2ni$1@xuxa.iecc.com>

By Thomas Mulvoy, Jr.
October 3, 2004

I know that radio station WEEI took its call letters from the old Edison Electric Illuminating Co. way back when. Do stations like WBZ and WNAC, (which was a radio station, too, once), have any such corporate connections? -- Mary L., Boston.

There's only one person to go to with your question, and she is Donna Halper, a media historian and instructor in the Journalism Department at Emerson College. Says Halper:

"Well, the short answer is some do have a unique history, but in Boston, most do not. Back in the old days, before the FCC, the Department of Commerce assigned the call letters, usually in sequential alphabetical order. First, they had three letter calls, and when those ran out, they moved to four letters, with W for stations in the east and K for the west. Some call letters originally had belonged to ships at sea -- after the tragedy of the Titanic, the Radio Act of 1912 said all ships had to have a wireless station on board in case of emergencies. WBZ, for example, used to belong to one of those ships in the era before commercial radio. Sometime in the early 1920s, a few station owners asked the Department of Commerce to give them special call letters that stood for a slogan. WGN in Chicago, for one, was owned by the Chicago Tribune newspaper, which had as its slogan the 'World's Greatest Newspaper.'

"Although some myths have sprung up, WNAC in Boston (which went on the air first as 'The Shepard Station' in late July 1922, owned by the Shepard Department Stores and John Shepard III) didn't stand for anything. It was assigned in alphabetical order (WNAA, WNAB, WNAC, etc).

"Greater Boston's first station, the pioneering WGI in Medford Hillside (where Tufts College is) was sequentially assigned, too, also in 1922. Before that, it used ham radio call letters, 1XE (the X stood for experimental, because the government thought radio was going to be a fad). The great old call letters of WBZ, which first went on the air in mid-September of 1921 in Springfield, not Boston, didn't stand for anything, either. And although the story exists that WHDH stood for 'We Haul Dead Haddock' (the station originally went on the air in Gloucester), it, too, was another set of call letters that didn't stand for anything in particular when it was assigned in 1929.

Interestingly, the Gloucester station that was its predecessor did have call letters that stood for something: The owners, the Matheson family of Gloucester, originally went on the air in 1926 and requested the call

letters WEPS (for Ethel Pearl Stevenson, the maiden name of Mr. Matheson's wife). Briefly, in 1927, there was a home shopping station (really!) in Boston, owned by the Shepard Stores, and it used the requested call of WASN (All Shopping News).

"In addition to WEEI, which was a requested call letter and did stand for the original owners, Edison Electric Illuminating Co., there were others of the same ilk. WNBH in New Bedford, for example, stood for the New Bedford Hotel, where its studios used to be. Still, Ms. Halper said, most Greater Boston stations just took whatever call letters the Commerce Department, the Federal Radio Commission (after 1927), then the FCC (after 1934) handed out.

Obviously all this went right over your head, but it must have struck
a nerve somewhere along the way. What does any of this political
smearing you have gone off on, have to to with media bias. The
example I gave showed how Dan Rather showed incredible bias by
choosing an 84 year old with 30+ year old memories and then only asked
HER OPINION, not facts. This from the anchor of CBS news and a 60
Mins show known for tough questioning, barging into offices and
demanding answers?

Rather to little old lady "Do you think Bush got into the ANG through
influence?"

Little old lady "Yes, I do. I've always felt that way"

No further questions required, case proved. He could have asked "What
evidence do you have that this is true? What documents did you see?
But Dan the man just couldn't seem to get the words out. And you know
why? Because he's so full of hate and venom he can no longer think
straight. And I would say your previous response puts you in that
category too.

# 2519. For sale: Part ownership in daytime AM in Alabama.

Newsgroup: rec.radio.broadcasting
Date: 2004-10-05 02:48:24 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <cjt21o$2o2$1@xuxa.iecc.com>
Source record: 3860

For sale:

Partial ownership in 1 KW daytimer in small Alabama
market. 1 KW, non-directional.

This is a joint venture. There is an element of risk
and you could lose all or part of your investment
(Uncle "Sam" makes me "do" it!) LOL!

Active or inactive investors with $5,000 min. are
welcome. No individual may own controlling interest.
This includes me!

Total asking price of station is $60,000 cash or
$75,000 on terms with $10,000 down. If I can raise at
least the $10,000 we are good to go!

I can email digital photos of the station taken just a
few days ago.

Tel: (478)741-1710 in Macon, GA.

I am known as the "Radio Crazy" on this forum but I'm
not THAT crazy! Last job was Chief Engineer for a 5 KW
fulltime AM in New York City. I think that makes me
"diplomat with portfolio" eh? (Glare!)

Do not worry, the money will not be deposited in my
Swiss bank account until I get permission from my
parole officer to fly to Rio! The ticket is with
Brazilian Bandit Airways and was paid for using all
small unmarked bills!

73,

Meyer Gottesman, W6GIV

Source record: 3858

Anyone know how strong is the signal for 1050 ESPN Radio in New York? Where do they transmit from? I seem to have more trouble picking it up than I do for other stations such as 660 (WFAN), 880 (CBS), 770 (ABC), 1010 (WINS), etc. I like listening to sports radio when driving and usually flip between 1050 and 660, depending on what's on or who's at commercial. 660 seems to come in so much clearer. 1050 seems to fade in and out a lot with static and there was even one time, on a Sunday I think, where 1050 was being overpowered by some other station because I was hearing music over the talk and it was not being played by ESPN. I wouldn't think that ESPN would skimp on the power of their stations.

The patterns *aren't* there.
>>

They used to be ... deleted as a "Y2K" cost saving measure.

>>
OK, there's a table that shows the relative field every (5? 10?) degrees of
azimuth, and I suppose you could plot it yourself.
>>

They were every 5 degrees, with both theoretical and "standard pattern" ...
plus "augmented" pattern, if augmented.

Also, the precise bearings of the pattern minima and maxima were provided,
including any local maxima and minima.

Oh, my! I just made the connection. I've got a copy of Bob's software, discovered quite by accident somewhere, and it's given me hours of fascination. The only reason I suggested radio-locator is because it integrates the pattern with a map, and I honestly didn't think the inquirer had much need for anything more than a representation.

But, come on, back at'cha...you know the reason why the disclaimer "for entertainment purposes only" is there is because there's no desire on the part of the website to become embroiled in some twit's lawsuit when it's used as a source for a frequency search. At the same time, I don't think that the radiation pattern or inverse-km is what's being sought, here, but an estimate of what this station's reasonable coverage area is. In that regard, 2 mV/m or 4 mV/m doesn't really make a whole lot of difference....especially with the crud that's all over the AM band these days.

The rf output of 1050 ESPN is directional, favoring the northeast. There is
a null toward Philadephia to protect 1060 KYW. I don't know where the
transmitter is located.

# 2525. Loop Goes to Emmis, WIND to Salem in Chicago

Newsgroup: rec.radio.broadcasting
Date: 2004-10-06 02:46:15 UTC
From: uncamark41@hotmail.com
Message-ID: <cjvm9n$ktc$1@xuxa.iecc.com>
Source record: 3865

A busy day yesterday in Chicago radio.

Both dailies reported that Bonneville agreed to give its classic rocker WLUP (the Loop) to Emmis Broadcasting, owner of modern rocker WKQX (Q101) in exchange for three Emmis stations in Phoenix--top-rated AM news-talker KTAR, "AC" KKLT (Jack FMish the Peak) and ESPN Radio sports talk KMVP. Emmis will take over the Loop on Nov. 1 through a broker agreement until the FCC approves the trade. Bonneville also owns in the Chicago market classic hits WDRV (the Drive), 80s/90s oldies WNND and modern AC WTMX (the Mix).

Q101 is locked in a war for the young male Chicago rock listener with ABC's active rocker WZZN (the Zone), which in the most recent Arbitrons it is winning by only one-tenth of a rating point. The Drive's softer, older skewing sound is performing better for Bonneville than the "classic rock that really rocks" approach of the Loop, but there are some that believe that atmosphere of the Latter Day Saints Church-owned Bonneville has made it hard for the Loop to perform as well as it could. There are also rumors that Emmis may move Q101's controversial morning man Mancow Muller to the Loop and bring the station back to its 90s heyday as a young-skewing talker in competition with Infinity's WCKG. We shall see.

In addition, Salem and Univision made some dealing--with Salem giving CCM WZFS (the Fish), along with San Francisco CCM KFSB (the Bridge) to Univision in exchange for Spanish contemporary AM station WIND (La Tremenda), along with Houston's salsa/merengue KOBT (Orbita 100.7), Dallas' Tejano KHCK (Kick 1480 AM) and Sacramento's KOSL. Salem also owns religious talk WYLL-AM in the Chicago market, while Univision owns regional Mexican WOJO (Que Buena), the dominant Spanish-language station in the market, and the Latin AC WVIV/WVIX "Viva" metrocast.

It's expected that Univision will flip the Fish to some sort of Spanish format, which will probably enrage its listeners in the same way almost every flip from an English to Spanish format does. Meanwhile, Salem may return WIND to an English news-talker, as it was before Westinghouse sold the station in 1984 to Univision predecessor Tichenor. However, while Group W's view of news-talk was relatively middle-of-the-road, Salem is expected to do a conservative talk format featuring its stable of syndicated hosts including Michael Medved, Dennis Prager and Hugh Hewitt. With ABC's WLS flailing about without a GM and losing some of its key local personalities, the time would be right for another hot talker to make an impact in the market. We will be watching this in the months ahead.

30 year old memories or even 74 year old memories can be very accurate. Talked to my 86 year old father yesterday about his childhood. He remembers the full names of all his neighbors, dates and intricate and accurate details of when he was 12 years old.

I thought that the "little old lady" was a very credible witness.

As to the ANG and whether Bush got in with special treatment. It was well known in Michigan where I lived at the time that you had to know someone to get into the National Guard. I doubt there were many living Americans at the time that did not fully understand this reality nationwide.

Our born again Christian president said straight faced to the camera the other day that he had no idea that he received any favorable treatment. This has to be a blatant lie or he is from another planet. I was drafted in 1968 and 75% of my basic training unit was black and 90% of those went to advanced infantry training and then straight to the front lines in Nam. They sure knew that they were getting special treatment. How many blacks were in Bush's NG unit?

I don't believe our president is telling the truth. I can't imagine anyone who was of draft age during that time believing him. You don't have to be full of venom or hate to believe it.

1050 ESPN Radio is 50,000 watts fulltime, just like the other stations you mention. However...

- AM signals "carry better" at the bottom of the dial. For the same amount of radiated power, 660 is stronger than 880 which is stronger than 1050 which is stronger than 1560.

- ESPN Radio (and WINS) are directional. They average 50,000 watts but that power is concentrated in some directions. ESPN concentrates its power to the northeast and radiates relatively little signal to the southwest, towards Philadelphia. WFAN, WCBS, and WABC are non-directional - radiating equally well in all directions. WINS concentrates its power due east. If you're in Jersey, you may be running afoul of the Philadelphia null in ESPN's pattern. (though WINS should be even weaker)

(there's a station in Philadelphia on 1060; it and ESPN must null their signals towards each other in order to avoid mutual interference)

I live up in California's High Desert, about 90 miles away from Los Angeles, but I'm doing a lot of work "down the hill" now and have had a chance to listen to some of the stations local to LA. I actually have one bank of FM presets dedicated to LA stations, and I have a preset for Star 98.7. I also have a preset for KBIG 104.3. I'm really curious as to what exactly the difference is between the two radio stations, as they are both owned by Clear Channel and both *sound* like Hot AC.

Thanks in advance,
SJS

Brett Pulley, 18 October
Forbes

Lowry Mays built clear channel into the Evil Empire of radio and entertainment. Now his son has to make nice.

L. Lowry Mays is a Texan's Texan, rock-ribbed, 6 foot 2 and larger than life. He started out as an investment banker; in 1972, when a client he was advising backed out of a deal to buy an FM radio station in San Antonio, Tex., Mays partnered with a pal and did the deal himself, paying $125,000. In the three decades since, he has built one of the largest and most powerful media companies in the nation, Clear Channel, a much-maligned giant that, in the view of its enemies, is just too damned big for anyone else's good.

Its tentacles stretch into myriad reaches of media and pop culture. Clear Channel owns 1,202 radio stations in 49 states, more than any other company; each week it reaches 100 million listeners, one-third more than its closest rival(Viacom). It also owns 36 TV stations and the world's biggest outdoor-advertising company, with 770,000 billboards, 150,000 of them in the U.S. that can be seen by 56% of the country's adults in a day. It controls 105 live-entertainment venues, hosting 32,000 performances each year and drawing 70 million people. In the first half of this year Clear Channel sold nearly 10 million concert tickets, more than three times the gate of any competitor. Many of those gigs were booked by the largest concert promotions firm in the U.S., a Clear Channel unit.

"They are the poster child for the evils of media consolidation," says Jonathan Rintels, who heads the Center for Creative Voices in Media in Washington,D.C. Adds Jay Rosenthal, counsel for the Recording Artists' Coalition, which lobbies against the company: "Clear Channel owns so many radio stations and concert venues that artists are constantly fearful of it." Senator John McCain (R-Ariz.), the popular populist, filed a bill that would force Clear Channel to break apart some of its businesses.

Are you accusing Dan Rather and the other poster of being like about 50% of
the population of the United States? I though so!

We are a nation so divided over what has become of things, it seems the most
prudent course of action would be to try a different administration and set
of policies. Anyone but Bush makes plenty good sense to me.

Thank you for the nice comments about AMSTNS (and TVFMSTNS).

What makes these most useful is that Larry Vehorn, W9AJ, keeps the data up to date. You should be thanking Larry for all his effort. He's doubtless very busy as the transmitter guru for over a dozen transmitters ranging from Class A FM through UHF TV to 500 kW shortwave beasts. And they are spread from one end of the USA to the other.

Jeff Millers Radio/TV history pages have a section listed for call
letter meanings. It's at
http://members.aol.com/jeff560/call192x.html

A lot of those stations are long gone however.

Charlie

There's no point in imagining that we can trust any of them to tell the
truth. There
is one thing (and one thing *only*) on the mind of a politician: the next
election.

They will say anything to win. When they are boxed in is when the lies
become apparent.
Other than that, they usually sound believable.

Jean Giraudoux said, "The secret of success is sincerity. Once you can fake
that,
you've got it made."

You know, if someone or a public interest group has their s**t together, they should mount a campaign to contest every single one of these transfers as contrary to the public interest. Then watch when the negotiations begin.

This intervention should demand, through the attachment of service level agreements, the re-imposition of news minimums, commercial time limits, public affairs programs (when they're likely to be heard, not buried in the 2-6am slot on Sunday morning). Access airtime for local bands. Direct those stations with a non-Chicago city-of-license (and the in-city operations, for that matter) to do ascertainments for their cities-of-license, and provide details to the file which would be evaluated for performance when license renewal comes up. And so on. And failure to meet these service levels would result in the transfer of the property/ies in question to another buyer, the proceeds of which would fund a media watchdog group which would continue to monitor broadcasters and fund local public broadcasting. How's that for self-regulation? If the FCC won't do it, outsource the work.

Basically turn back the clock to the days when broadcasters had a mandate to serve their audience. In the right hands, it might actually help to invent a new kind of radio, just as media fragmentation in the 60s and 70s helped to bring about AOR, all-news and other formats which are staples in the industry today.

(I can dream, can't I?)

>30 year old memories or even 74 year old memories can be very accurate.

Yes, they can. Memories of WHAT? She didn't get a chance to talk
about them.

>Talked to my 86 year old father yesterday about his childhood. He
>remembers the full names of all his neighbors, dates and intricate and
>accurate details of when he was 12 years old.

Sure, but that doesn't make his opinion of Bush any more credible
unless Bush was one of his neighbors at the time.

Sure, let's hear what the little old lady remembers. Someone told
her they had to let Bush in? She overheard conversations about
favors exchanged for letting him in? She saw documents halting
investigations of why Bush didn't show up when he should have? She
noticed that Bush was among a group of people treated specially in
certain ways (name them) in the Guard? She knows that anyone in
<this unit> had to kiss <this officer>'s ass? These are things to
base a credible opinion on.

>I thought that the "little old lady" was a very credible witness.

Witness to WHAT? That Bush did NOT assassinate Abraham Lincoln?
All she stated was her opinion, without any basis, justification,
or reasoning. Was it her opinion that ANYONE who got into the
ANG received special treatment? If so, why? If not, why does she
think that Bush, specifically, got special treatment? What did
she see or hear that justifies this?

I'm not saying her opinion is wrong, but I'd like to hear convincing
evidence, not just her opinion.
```

>As to the ANG and whether Bush got in with special treatment. It was
>well known in Michigan where I lived at the time that you had to know
>someone to get into the National Guard. I doubt there were many living
>Americans at the time that did not fully understand this reality
>nationwide.

I doubt that the majority of Americans living at the time even knew
there *WAS* a National Guard and that it wasn't a football team or
a position on a football team.

>Our born again Christian president said straight faced to the camera the
>other day that he had no idea that he received any favorable treatment.
>This has to be a blatant lie or he is from another planet. I was drafted

Maybe. But the little old lady has not given me any reason to
believe that. Maybe she CAN, but she was never given a chance
to give one.

>in 1968 and 75% of my basic training unit was black and 90% of those
>went to advanced infantry training and then straight to the front lines
>in Nam. They sure knew that they were getting special treatment. How
>many blacks were in Bush's NG unit?

>I don't believe our president is telling the truth. I can't imagine
>anyone who was of draft age during that time believing him. You don't
>have to be full of venom or hate to believe it.

Ever think of the possibility that Bush actually BELIEVES he didn't
get special treatment? (It's not unheard of for parents to exert
influence on behalf of their kids behind the kids's backs so they
don't know about it.) Doesn't EVERYONE get served caviar by his
personal maid every night? There weren't really many blacks in the
USA (around the time of the Vietnam war), were there? A few thousand,
maybe. They all move around from one riot to another in different
cities :-) Sure don't see them in MY neighborhood. Oh, maids don't
count.

You can probably argue that I used influence to stay out of Vietnam.
I was white, had good enough grades to get into college, had parents
well-off enough to pay for some of it (these three alone are probably
a significant advantage), and I was lucky enough to be born on a
day which drew a high draft number.

Star targets women 25-34, non-ethnic, and leans alternative. KBIG is
rhythmic AC, broad in target (25-54) and targets Hispanic females.

# 2540. Howard Stern jumps to Sirius, helps satellite radio

Newsgroup: rec.radio.broadcasting
Date: 2004-10-07 04:32:18 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <ck2gsi$if7$1@xuxa.iecc.com>
Source record: 3880

Wed Oct 6, 2004

By Franklin Paul
Reuters

Howard Stern, the ribald radio host who has become a poster boy for bad behavior on U.S. airwaves, will jump to Sirius Satellite Radio in January 2006, freeing him from the grips of regulators and giving the nascent satellite radio sector a big boost.

The $500 million, five-year deal, announced by Stern and Sirius on Wednesday, lures Stern away from Viacom Inc.'s (VIAb.N: Quote, Profile, Research) Infinity Broadcasting, and will propel a subscription-based radio business modeled on cable television.

> Are you accusing Dan Rather and the other poster of being like about 50% of
> the population of the United States? I though so!

No, I'm accusing Dan Rather of being a totally unprofessional and
biased reporter. Everyone is entitled to their political opinion.
The Dan Rather's of the world and the other poster claimed that they
don't let it influence their news coverage. I just showed you exactly
how it does.

Care for some more? How about this little teaser for the 11 o'clock
news from CBS-NY local after the first presidential debate. "US
launchs new military drive in Iraq, dozens of children killed" The
US did launch a new military drive. Dozens of children were killed.
But the dozens of children were killed BY TERRORISTS WITH TWO CAR
BOMBS while getting candy from US servicemen. Is that fair and
balanced reporting? Was that too much to ask from what is supposed to
be a professional news organization?

>

Once again, you jokers just prove my point. Instead of recognizing
the obvious bias shown by the examples, or at least sticking to the
subject, you go off on a political rant, which just shows how
desperate you are.

Source record: 3881

>>
The rf output of 1050 ESPN is directional, favoring the northeast. There is a
null toward Philadephia to protect 1060 KYW.
>>

Actually, it is precisely the opposite.

The controllable null in KYW's pattern is towards 1050. This is the only case I
am aware of of a Class A station protecting a Class B station.

(KYW has a mimima, NOT a null, in its pattern towards the co-channel Class A in
Mexico. The depth of this minima is a consequence of the spacing of the array's
two towers).

1050 protects the entire U.S.-Mexican border, as was agreed to in NARBA.

(The two 48-state Class II-B stations on Mexican Class I-A clears were required
to operate 50 kW-U, DA-1, and both 1050 and 1220 do so; the two Alaskan Class
II-B stations granted by NARBA on Mexican Class I-A clears operate 5 kW-U, ND,
but one has been deleted).

1050 didn't exist before NARBA, and was granted 50 kW-U, DA-1, in New York, by
that treaty. (1220 was granted 50 kW-U, DA-1, in Cleveland, by that same
treaty).

KYW was moved to Philadelphia from Chicago, probably as a 10 kW-U, ND station.

1060 in Philadelphia would be mutually exclusive with 1050 in New York if KYW
didn't protect 1050, thereby establishing a defendable Class A contour towards
the NE (and 1050) for itself.

Did all this go right over your head? The fact that the memories are
30+ years old from an 84 year old lady is just the icing on the cake.
Rather asked her if "SHE FELT THAT BUSH GOT IN THE ANG THROUGH
INFLUENCE" She said "Yes, I've always felt that way." And then no
follow up. Not even a simple "How do you know that?"

I've always felt that NYC is a better city than Chicago. Is that all
that's required for it to be true? Do you understand the difference
between fact and opinion?

There are plenty of people available with relevant information that
directly refutes how the little old lady "felt." Why weren't any of
them on either the first or the second 60 Mins show?

As to the ANG and whether Bush got in with special treatment. It was
> well known in Michigan where I lived at the time that you had to know
> someone to get into the National Guard. I doubt there were many living
> Americans at the time that did not fully understand this reality
> nationwide.

> T

And as usual, here we go again. Story has to be true, so anyway you go about proving it, no matter how biased and ethically challenged, it's OK.

OK, so I guess that explains it. I do live in NJ so I guess the Phill
station is the reason. Kind of sucks though. Why is it exactly that
staions at the bottom of the dial "carry better?"

Broadcasting does not fall under those provisions. In truth, were the U-S Congress to decide to nationalise broadcasting, there's nothing that licensees could do. This is how the FCC succeeded in splitting TV-radio-newspaper combos in the 70s. And it wouldn't be difficult to craft legislation that identifies a class in which Clear Channel is the only member. This was done recently in the other direction, when citizenship requirements to own a U-S broadcast license was changed, but oddly enough only Rupert Murdoch met the description of the class in the legislation.

7th October 2004

The Broadcasting Commission of Ireland (BCI) has signed a ten year sound broadcasting contract with North West Broadcasting Limited (trading as OCEAN FM) to provide a local sound broadcasting service for the franchise area of Donegal South, Sligo, and Leitrim North.

OCEAN FM launched last Saturday (Oct 2nd) and aims to provide a locally focussed, nationally aware radio service for all age groups that will become an integral part of life in Counties Sligo, North Leitrim and South Donegal. The station will deliver a high quality, local radio service to the listeners of the franchise area, providing programming that will entertain, inform and engage the diverse audiences of these counties. Comprehensive local news, sports and current affairs programmes will provide for the interests, concerns and issues affecting the listeners of the area.

The station has a dedicated broadcasting studios in each county within the franchise area.

The station replaces North West Radio which did not have its licence renewed after 14 years of broadcasting to south Donegal / Sligo / North Leitrim. North West Radio had threatened legal action against the BCI but this was withdrawn and the station which had gained much support closed down on Friday last. NWR sister station Mid West Radio continues to broadcast from Mayo on 96.1 FM & 97.1 FM.

> be a professional news organization?

CBS News has nothing to do with the local news operations of the
network-owned stations. They've been independent of the network news
operation for at least thirty years or more. The network provides
news video packages to their affiliates, but each individual station's
responsible for its own product. Dan Rather doesn't dictate to the
local stations, and vice versa (or at least I hope they don't dictate
to Dan Rather).

And could we have the citation of your facts--preferably AP or
Reuters, not NewsMax or Drudge?

The Communications Act of 1934, as amended, 47 USC, is constitutional. I don't have time to go into case law with you, but consider that the First Amendment provides absolute and unfettered freedom of expression, whereas the FCC is empowered to determine who, when and where such speech will occur. Further, while the FCC self-limits the degree of interference it imposes on the subject matter aired in the interest of promoting a diversity of voices, it still has the Fairness Doctrine in place, although much gutted today, which requires that a station espousing an opinion or advocating an outcome or political candidate offer equal and equivalent time to opposing views or spokesmen. Finally, the FCC has rules defining and limiting indecency. The First Amendment makes no such distinctions in any of this.

Numerous Supreme Court cases have considered these issues over the years, and have repeatedly affirmed the constitutionality of the Communications Act of 1934. Therefore, given the contradictions between the First Amendment and the restrictions imposed by and the powers granted the FCC, it can be concluded that broadcasters have limited free-speech rights, far less than a newspaper or other printed matter, and certainly far less than the freedoms granted individuals. Broadcasting is thus not fully protected by the First Amendment, and given the opinions of the relevant cases before the Supreme Court, such abridgements in freedom of speech are constitutional. All the rest is derived from this one fact.

Amateur Radio Newsline™ Report 1417 October 8, 2004

Amateur Radio Newsline report number 1417 with a release date of Friday, October 8, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. A New Jersey radio club makes a big donation to the local community and hams in Great Britain may get more privileges on 40 meters. These stories and more on Amateur Radio Newsline report number 1417 coming your way right now.

(Billboard Cart Here)

**

PUBLIC SERVICE: RADIO CLUB DONATES $400,000 TO NJ PARK

A radio club has donated $400,000 to Essex County, New Jersey. This, to pay for renovations already made to Irvington Park where the club has its headquarters. And there's more money on the way. Amateur Radio Newsline's Henry Feinberg, K2SSQ, has the rest of the story:

--

According to a story in the September 29th edition of the Newark Star Ledger, the $400,000 donated by the Irvington Amateur Radio Team came from the states Green Acres program. It will be used to pay part of the $1.1 million in renovations that included new tennis courts, basketball courts, benches and a track.

The club, a nonprofit organization that volunteers as keepers of the park. It is expecting another $500,000 in Green Acres funds to pay for the second phase of the parks upgrade. Phase I of the $2 million overall was completed during early summer. Phase II, scheduled to begin next year, will include a second floor addition to the field house, where the radio club has its headquarters.

Phase I was completed during early summer. Phase II, scheduled to begin next year, will include a second- floor addition to the field house, where the radio club has its headquarters. The funds obtained by the club have been matched by Essex County.

Charles Freeman, N2JGC, is the clubs president. He says that the park renovations have boosted community pride.

--

Freeman: "Its all volunteerism. Its a bunch of wonderful people who dedicate their time and service to I-ART - the Irvington Amateur Radio

Team, the Office of Emergency Management, CERT, and any way we can get involved in helping out our community."
--

Feeeman says that this has helped get some of the children off the street by getting them involved in computers and amateur radio.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.

--

The club brought its headquarters to the park in 1998. Soon after, members became the primary caretakers of the facility. (Star-Ledger, ARNewsline(tm))

**

RESTRUCTURING: VICTORIA VK HAMS LOOSE LOWER HALF OF 70CM

The bottom half of the 70 centimeter band is no longer available for amateur radio in most of Australia's Victoria state. This, as the result of a new exclusion zone that has just become law. W-I-A reporter Jim Linton VK3PC explains:

--

The ACA has prohibited all amateur radio activity on the 420-430 MHz band within Victoria in an area of up to a 250 kilometre radius of the Melbourne General Post Office. That band will now be used for a new state-of-the-art digital radio system to replace the current analogue systems of the Victoria Police, Metropolitan Ambulance Service and Metropolitan Fire Brigade.

The exclusion zone has been anticipated and comes after other permanent Exclusion zones were imposed for similar purposes around Perth and Sydney, including the Australian Capital Territory. The band 420-430 MHz has been used for amateur fixed links and amateur television. The WIA has assisted with the timely closure and migration of those links in Victoria in liaison with the Bureau of Emergency Services Telecommunications and the ACA.

The new digital voice and data radio system now being installed for Emergency services will also provide common coordination channels to support multi-agency response to major incidents and events. The aim is to have it fully operational well in advance of the Melbourne Commonwealth Games in 2006. This has been

Jim Linton VK3PC for WIA National News.

--

Where else the A-C-A will impose these exclusion zones is not known as we go to air. (WIA News)

**

RESTRUCTURING: MORE 40 METERS FOR UK HAMS

Meantime there is much better news coming from the U-K. That's where Ofcom -- the Office of Communications -- says that it might change the rules and give that nations hams more access to 40 meters. Jeramy Boot, G4NJH, is in Nottingham with more:

--

Ofcom is proposing to vary the Foundation, Intermediate and Full amateur radio licenses to permit UK amateurs to operate in the band 7,100 to 7,200kHz.

The band would be allocated to the Amateur Service on a Secondary basis, and would be available on the basis of non-interference to other services, inside or outside the United Kingdom.

Ofcom announced a one-month consultation period beginning on 23rd September and all license-holders are invited to make representations to this proposal in writing or by e-mail.

Jeremy Boot, G4NJH

--

The cutoff date for U-K hams to comment on this proposed Notice of Variation to the nations Amateur Service rules is October 23rd. (GB2RS)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WB9AET repeater serving Chicago Illinois.

(5 sec pause here)

**

RESCUE RADIO: SATERN IN THE PUBLIC INTEREST

Ever hear of SATERN? Not the planet but a group of true helping hams that are always ready to serve the public need.

In our reports on the numerous hurricanes that hit the United States mainland the past few weeks we have often referred to several high frequency service nets. These include the Hurricane Watch Net, the Maritime Mobile Services Net and of coarse SATERN - the Salvation Army Team Emergency Network. You heard a lot of audio from the Hurricane Watch Net and the Maritime Mobile Services Net in our reports, but little of SATERN. That's because it was not really audible at our studio here on the U-S west coast. But we recently caught it being relayed on the Internet by K-A-4-E-P-S audio website and grabbed a few minutes of it in operation. Sometimes it takes nothing more than a referral to help out. Take a listen:

--

SATERN Net Audio. Hear it in the audio report at www.arnewsline.org.

--

Some of you may say that it sounds a little boring to just sit there hours on end, taking messages or directing people to a website. But that's an important part of the Salvation Army's job and the SATERN Net is one of its most important tools.

Major Pat McPherson, WW9E, explains it all on the SATERN website. He says that the Salvation Army Team Emergency Radio Network provides emergency communication support to the Salvation Army wherever needed. As a result, SATERN members have found themselves in tornadoes, floods, hurricanes, fires, aircraft accidents, bombings, earthquakes -- just to name the more expected types of emergencies.

In short, SATERN is not your ordinary radio club or net. Maybe not the most exciting to listen in on but it is ham radio in service to the public, at its very best. (ARNewsline(tm))

**

ENFORCEMENT: ENNIS COMMUNICATIONS IN $300,000 CONSENT DECREE

Turning to enforcement news, word that Emmis Communications has reached a $300,000 settlement with the Federal Communication Commission. This, after admitting that it broadcast indecent material on the airwaves.

Emmis owns 27 stations nationwide. The settlement comes in part from comments made by a nationally syndicated Chicago shock jock named Mancow Muller. Muller is an air personality at WKQX-FM and has been the source of every previous FCC fine issued to Emmis. To date that totals $42,000.

Besides the $300,000 payment, Indianapolis-based Emmis has also agreed to implement a company-wide plan intended to prevent future violations. (FCC)

**

ENFORCEMENT: ONE LAST CHANCE FOR K1MAN

The FCC appears to be giving Glenn Baxter, K1MAN, one final chance to strictly conform to the agency's Part 97 rules. This, before taking action against the Belgrade Lakes, Maine ham. The FCC's Daryl Duckworth, NN0W, explains:

--

Duckworth: "A warning letter went to Glenn Baxter, K1MAN, of Belgrade Lakes, Maine. Back in April of this year the Commission notified him of two areas of operation that would lead to enforcement action and / or designation for a hearing to determine his qualifications to remain

a licensee. This is regarding deliberate interference to ongoing communications and using the station for pecuniary interest.

Copies of the warning notice were also went to the United States Attorney in the United States Department of Justice, District of Maine.

This is Daryl Duckworth, NN0W, reporting."

--

In the September 15th Warning Notice the FCC's Riley Hollingsworth tells Baxter that the Commission has received approximately a dozen complaints that K1MAN Amateur Radio transmissions started on top of ongoing communications of individual operators, as well as on top of ongoing communications of the Salvation Army Team Emergency Radio Net. Hollingsworth says that this is a net that has been handling health and welfare traffic for this season's hurricane victims.

As to the pecuniary interest allegation, the FCC says that this is because Baxter's website lists a bulletin service transmission schedule and items for sale on the same pages. The FCC says that this is in violation of Sections 97.113(a)(2)and (3) of its rules.

Hollingsworth ends the letter by saying that failure to correct the violations will subject Baxter to enforcement action against his station and operator licenses. Baxter was given twenty days from the date the warning notice was issued to resoind. (FCC, RAIN)

**

ENFORCEMENT: FINE "KIND OF" REDUCED FOR GOOD BEHAVIOR

And a follow-up to a story we reported some time ago about a few unauthorized transmitters coming on the air in California. This, in 2003 around the time of Super Bowl thirty-seven. Amateur Radio Newsline's Bruce Tennant, K6PZW, is here with an update:

--

As listeners may recall, Global Radio, Inc. had requested that the FCC issue authority for it to operate on transmitters 89.1, 92.9, 93.7, 96.9, 104.1 and 106.9 Mhz. This, in conjunction with the Super Bowl thirty seven activities at Qualcomm Stadium in San Diego. T

he FCC granted operation on 93.7 and 96.9 Mhz under the call sign WN3XFL, but it specifically denied Global's request to use 89.1, 92.9, 104.1 and 106.9 Mhz. This based on possible interference to existing stations in Mexico and the U.S. as outlined under bi-lateral agreements.

But on January 26, 2003, an agent from the San Diego FCC field office was listening to the FM band. He observed that WN3XFL was active and operating, without authorization, on 88.98, 104.1 and 106.9 Mhz. This, in addition to its permitted operations on 93.7 Mhz and 96.9 Mhz.

Global's willful violation of its operating authority initially resulted in a fine of $12,000. In its reply, the company claimed it could not pay that amount but the Commission didn't buy that argument. Global also argued that its otherwise unblemished compliance record should be taken into account.

Well, the FCC did just that. Well, kind of. Because of the unblemished record, the Commission reduced the fine by $1200. If you do the math, that's now a fine of $10,800 that Global has been told it has to pay.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The full FCC finding in this case is on line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-3017A1.doc (CGC)

**

THE HAM BUSINESS WORLD: A HEALTHY C3I

Turning to the ham radio industry, C3I says that it is not out of the ham radio business. In fact, following a short pause to reassess the current business climate, the concern is shipping out products and its business as usual according to company owner Owen Wormser, K3CB.

--

Wormser: "We are fully operational. We have built up a good stock of out standard antennas. We have taken special orders the last two weeks. So, we have been able to recover in about two to two and a half weeks time."

--

C3I is a unique company that manufactures printed circuit board modules, VHF, UHF and Super High Frequency, high-performance Yagi antennas and related accessories for the Amateur Radio and land mobile market. More information is on-line at www.c3iusa.com and look for a complete company profile with K3CB on an upcoming Rain Report. (ARNewsline(tm))

**

THE SOCIAL SCENE: TITUSVILLE FL. IN OCTOBER

Florida's North Brevard Amateur Radio Club will be among the first to begin celebrating the return of the good days following the hurricanes of 2004. This, as it announces that its Titusville Hamfest will be held on Saturday, October 23rd.

This year's venue is the Disabled American Veterans Chapter 109 building in Titusville. The event is open to the public from 7 a.m. to 2 p.m. Eastern time. More information is on the club webpage at www.northbrevardradioclub.org (Via e-mail)

**

THE SOCIAL SCENE: SAN DIEGO HAM RADIO ROUNDUP & HAMFEST

And on the West side of the country the San Diego Roundup and Hamfest hosted by ARRL San Diego Section takes place October 30th from 8 a.m. to 4 p.m.. The location is Hilltop Recreation Center on Ovieda Way at San Diego. For more information contact KC6NXZ by telephone at area code 619-561-6678 during normal business hours Pacific coast time. BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RALPH WRIGHT (MIKE RIVERS), W5JVI - S.K.

More sad news to report with word of the passing of Ralph Wendel Wright, W5VJI. Better known to his many fans as Mike Rivers, Wright dominated the airwaves at radio station CKLW from 1967 to 1970.

Wright suffered a cerebral bleed in May from which he never recovered. He passed away at his home in Antioch, Tennessee on Monday night September 13th.

In addition to being a top rated air personality W5JVI was also a gifted musician, jingle writer, a master at radio production and a very active ham radio operator. No public memorial service was planned. (W2JKD)

**

THE CHANGING OF THE GUARD: FRANK TUREK, DL7FT - S.K.

Also, noted D-Xpeditioner, Frank Turek, DL7FT, became a "Silent Key" on August 17th. Over the years Turek traveled to many rare locations to hand out new country contacts to many operators worldwide. He is survived by his wife Siegrid, DL7CN, who will be handling QSL duties and will continue to keep the DL7FT Post Office Box open. (OPDX)

**

NAMES IN THE NEWS: RAC LEADERS RESIGN FOR HEALTH ISSUE

Two key officers of Canada's national Amateur Radio Society have stepped down for health related reasons. According to an RAC bulletin issued on October 5th, President Daniel Lamoureux, VE2KA, and First Vice-president Bob Nash, VE3KZ have resigned after having been

hospitalized with heart related problems.

The bulletin says that the Radio Amateurs of Canada Board of Directors will convene a special meeting as quickly as possible. This, to deal with the vacancies created by these resignations. No date for the meeting has yet been announced. (RAC)

**

RADIO HEALTH: KOREAN RESEARCHERS CLAIM CANCER CONNECTION TO HIGH POWER RADIO TRANSMISSIONS

Korean scientists sat that they have found that regions near some A-M radio broadcasting towers show 70 percent more leukemia deaths than those without. This, according to Wired News which reports that the study, to be published in an upcoming issue of the International Archives of Occupational and Environmental Health, also found that cancer deaths were 29 percent higher near such transmitters.

Two years ago an Italian investigation found death rates from leukemia increased dramatically for residents living within two miles of Vatican Radio's powerful array of transmitters in Rome. The Koreans looked at the death rates in 10 regions with AM radio transmitting towers broadcasting at more than 100 kilowatts and compared them with control areas without transmitters.

The substantially higher cancer mortality in those who lived within two kilometers of the towers led researchers to conclude that more investigation was needed. However, they also said their study did not prove a direct link between cancer and the transmitters. (Published news reports)

**

HAM RADIO NEAR SPACE: A NEW ALTITUDE RECORD BY SIMSAT 1B

Pat Kilroy, N8PK, reports a new altitude record of over 112,900 feet was set by the SimSat-1B mission when it flew last week. Pat says that while the VHF telemetry failed early in the flight there are numerous clues as to why and the group is piecing the puzzle to help improve for future operations.

The Simulated Satellite or SimSat project is an education and outreach activity being developed by N8PK at the NASA Goddard Space Flight Center. A SimSat spacecraft uses a small high-altitude weather balloon platform to fly experiments designed and built by students to near-space altitudes.

In this case, a tiny CricketSat transmitter on UHF was also on board as a last minute hitchhiker. Powered by a standard 9 Volt alkaline battery and producing under 20 milliwatts, it operated all the way through splashdown and saved the day for tracking the flight.

More information and the part ham radio plays is on line at www.patkilroy.com/simsat on the World Wide Web. (N8PK)

**

HAM RADIO IN SPACE: MICROSAT ON DISPLAY

And some news from Dr. Perry Klein, W3PK, who says that The Smithsonian National Museum of American History has put a Microsat Mechanical Test Model on display in time for AMSAT's 35th Anniversary meetings. The satellite is suspended from the ceiling outside the NN3SI Smithsonian Amateur Radio Club station. That's located at "The Information Age" exhibit on the first floor at the West end of the American History Museum. (ANS)

**

HAM RADIO IN SPACE: SOLDERING ON-ORBIT

Meantime, the ham astronauts on the International Space Station have been trying to solder in zero gravity, and the results are intriguing. The NASA website says that the solder, heated, became a molten blob with a droplet of rosin clinging tight to the outside. As the temperature increased, the droplet began to spin, round and round, faster and faster, like a miniature carnival ride. You can see and enjoy the video of this experiment at at: http://science.nasa.gov/headlines/y2004/16aug_solder.htm (ANS)

**

DX

In D-X, word that G3UML is joining the Oceania DX Group operation from Lord Howe Island which is scheduled to start on 9th October. Separate stations will be active on CW and SSB. (GB2RS)

And look for DF7XE to be active portable SV8 from Thassos Island through the 13th of October. He will be using CW, SSB, PSK31 and RTTY on 10 to 80 meters. (OPDX)

Lastly, information that PA0CJH operating as 9G5JH is active from Ghana until November 13th. He is on 80, 40, 20, 17 and 15 meters using SSB, CW and PSK31. For each of these operations, Q-S-L as directed on the air. (OPDX)

**

THAT FINAL ITEM: ITS JOTA TIME

And finally this week, its time for scouts around the land to get together and take to the ham bands in the annual Jamboree on the Air. Amateur Radio Newsline's Mark Abramowicz, NT3V, is also a parent involved in the scouting program and has this inside look at the big event:

--

It's one of the best operating events of the year.

Why?

Because it showcases the best of our hobby to thousands of young people across the country and around the world.

For me, and others, it also gives us as operators a chance to reach out in brotherhood and friendship to young people. We get to serve as a bridge with our radios to other children and teens who share similar interests in Scouting.

Charlie Beck, chairman of Venture Crew 59, sponsored by the Frankford Radio Club and based out of Kutztown, PA is excited about his group's plans.

He says they will be operating KC3BSA from the Hawk Mountain Scout Reservation in Summit Station in eastern Pennsylvania.

"We're going to set up a couple stations in our science and tech center," Beck says.

At this point, he says you'll find Crew 59 on the HF bands on phone, CW and PSK 31. He says there are also plans to set up a VHF station and an EchoLink position.

Becks says the best part of the weekend event is getting visitors to the operation involved.

"I know we have some Girl Scout units and Cub packs and Boy Scout troops that will be stopping by," Beck explains. "They'll all get a turn to get on the air and try to make a contact with another Scout in another part of the world."

Beck says some get mike-shy, but that quickly dissolves with the help of a Venture Crew member sitting beside them.

"They'll be giving their name, their rank and talk about their hobbies and tell them where they're calling from which would be Schuylkill County in eastern Pennsylvania," Beck says.

Beck says the special part about JOTA is its diversity.

"There are Girl Scouts and Girl Guides. There's the World Association of Girl Guides and Girl Scouts that are invited to join in the JOTA," Beck says. "There's also a patch that the Girl Scouts can earn just like the Boy Scouts can earn for making contacts."

And, he says, for those who are a little shy about grabbing the microphone, there's also a keyboard.

"It's interesting to find the quiet Scout or the quiet boy to come in and sit down and get behind PSK 31 and really get in there and spend an hour chatting with different people around the world," Beck says.

Beck says Scouts across the country and around the world will be camping out and working radios from field conditions. Others will be going to stations of operators who've invited them in to take part.

Operators play a big part in making it happen and whether you've been a Scout in your lifetime isn't a factor. It's simply sharing the joy of the Amateur Radio service we've all come to appreciate.

Hope to hear you on the air during JOTA weekend.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

The 47th Jamboree on the Air takes place October 16th and 17th. More information is on line at www.scout.org/wse/jota.shtml and the Leagues website at www.arrl.org. (ARNewsline(tm))

This all seems quite strange, so I assume there is a good story to explain how it all came about? Not knowing the dates when KYW moved to Philadelphia, or when the "NARBA" was ratified, I assume that the move of KYW occurred well before the "NARBA"? If this is the case, how did the KYW pattern come to have such a deep null towards WINS, which wouldn't have even existed at the time?

By Ellen Simon, AP Business Writer
New York

Shock jock Howard Stern's move to Sirius Satellite Radio Inc. begins an association between a man who was happy to describe, in detail, Paris Hilton's sex tape and the industrial giants of the auto industry.

Shocked? Don't be. After all, every car show has its company-sponsored cleavage.

The audience for satellite radio is "the car-buying male public," said Scott Greenstein, president of entertainment and sports for Sirius radio.

Sirius and its larger competitor, XM Satellite Radio Inc., know they need men to embrace them if their business plans are to work, and the auto industry is more than happy to help.

http://newsobserver.com/24hour/business/story/1720990p-9534162c.html

Even though Sirius has lost more than $1 billion in the last five years and XM has lost $1.5 billion since 1992, they've attracted investments from most of the large auto makers.

Daimler-Chrysler Corp. has invested $100 million in Sirius. Honda Motor Co. has put about $50 million into XM while General Motors Corp. has invested $120 million and given XM a $250 million line of credit.

And that's not all. There are other incentives: GM and Honda pay for the first three months XM subscriptions in some model cars, said Chance Patterson, an XM spokesman.

The Acura TL, Cadillac Escalade and Chevrolet Cobalt advertise XM radio availability. "You go to a dealership and XM has a visible presence there," Patterson said. "Most dealers have an XM kiosk with a radio and a lineup." "How important is the car industry? Critical," he said. "Half of our subscribers come from the new car market."

Men are "the group most likely to be buying cars," said Sirius spokesman Jim Collins. "This is the group listening to all the sports programming, the group likely to spend a lot of time in their automobiles. That's why the Stern agreement is so important and a watershed for us. It mirrors our target audience."

Stern, who said Wednesday that he would move to Sirius in 2005 as part of a $500 million deal, is such a natural fit for satellite radio that XM executives said they had negotiated with him too. Apparently, they decided his price was too high.

XM, the dominant player in satellite radio with 2.5 million subscribers to Sirius' 600,000, launched a show Monday by equally salacious shock jocks Opie and Anthony.

Satellite radio doesn't lease the public airwaves, as traditional radio does, so it isn't subject to the decency scrutiny and hefty fines from the Federal Communications Commission the shock jocks face on traditional radio.

XM charges listeners extra to hear The Playboy Channel, whose programs include "Judge Julie's unique brand of justice on Sex Court."

Sirius hasn't been shy, either.

In an ad the Advertising Women of New York voted "most sexist ad of the year," Sirius showed buxom "Baywatch" sex symbol Pamela Anderson washing a car by sliding across it in short-shorts and a wet tank top and buffing the chrome with her bottom.

Auto makers are betting satellite radio's mix of content and marketing will convince customers to buy dedicated satellite radios, which usually cost $100 or more, and pay $9.95 to $12.95 a month to listen to them. There are stereo models for the home, wireless kits that can adapt a traditional radio to satellite and portable radios that can move from a car to a boombox mount.
Still, the 1 million GM cars sold with XM radios since the company started installing them three years ago are a fraction of the 17 million vehicles sold in the United States last year. XM predicts GM and Honda will make another 1.5 million cars this year equipped with XM radios.

Sirius, which entered the car market later than XM, is far behind. Only 112,000 cars had Sirius radios at the end of June.

Sales of satellite radios were heavily skewed toward male techno whizzes and audiophiles when the radios first rolled out, said Scott Tappan, the sales and marketing manager for XM Satellite Radio and GM subsidiary OnStar Corp. Now, "It's still generally male, but we are seeing a whole lot more females."

To give listeners a chance to test drive the radios, Sirius has an agreement with the Hertz Corp. and XM has a deal with Avis Rent a Car, Inc. Avis has seen an increase in demand for its premium and luxury cars since XM radios became standard equipment in those categories, said Susan McGowan, an Avis spokeswoman. The company even includes references to XM in its national advertising campaign.

She said men love the NASCAR broadcasts, and 21 channels of regional weather and traffic and an emergency channel, which "had all kinds of road closures and evacuation information that wasn't available elsewhere" during the Florida hurricanes.

Both XM and Sirius have more than 100 channels, and both offer channels focused exclusively on love songs, 60s music and classic soul.

But there's also lots of testosterone-tinged programming, especially on underdog Sirius, which has spent millions on deals to air the National

Football League, National Basketball Association and National Hockey League games.

It has a garage rock channel produced by Bruce Springsteen's E Street Band guitarist "Little Steven" Van Zandt and is launching another produced by rap star Eminem and Jimmy Iovine, chairman of Interscope Records.

Sportswriter Mitch Albom, football commentator John Madden and the men of the Orange County Chopper custom bike shop all have shows.

Then there's the "Wiseguy Show," promoted as a celebration of "life, the arts and meatballs."

# 2561. Runaway truck causes collapse of radio tower

Newsgroup: rec.radio.broadcasting
Date: 2004-10-12 02:29:42 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <ckffim$si4$1@xuxa.iecc.com>
Source record: 3801

Sat, Oct. 09, 2004
Associated Press
Morganfield, Kentucky

A runaway boom truck caused-WMSK's tower to collapse, knocking the AM and FM radio station off the air.

A utility company boom truck had been left at a repair shop on a hill over looking the station during the day Thursday, said Don Sheridan, the station's program director. A brake that was set on the truck apparently failed.

Sheridan said the truck rolled down the hill around 10:30 a.m. CDT, and broke some of the tower's support cables, causing it to fall.

"It's just spread all over the field out there," he said.

An announcer on duty at the FM portion of the station didn't hear the crash as the station was carrying a Major League Baseball game. He learned there was a problem when listeners phoned in, Sheridan said. Both the AM and FM stations were silenced.

The stations got back on the air with low power yesterday, but Sheridan said it will take a month to get a new tower and the antenna that was attached to the tower and get them installed. WMSK is owned by Union Broadcasting Inc.

Historical Journal of Film, Radio and Television, June, 1994 by Martin Doherty

For the greater part of the twentieth century, radio was without question the most powerful means of international communication. Until relatively recently, radio was the only medium with a truly global reach, capable of delivering a message simultaneously into the homes and minds of millions of listeners around the planet. Given its range, it is scarcely surprising that radio was rapidly taken up as a medium for the transmission of political propaganda. This was particularly true in times of international conflict, and during the Second World War, radio played a key role in the propaganda campaigns of both Axis and Allied powers. Radio was used as a transmission mechanism for morale boosting material for domestic consumption; it was also employed as a weapon in the psychological war waged against the enemy...

# 2564. Voice of America used to emanate from Dixon

Newsgroup: rec.radio.broadcasting
Date: 2004-10-12 02:29:45 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <ckffip$siu$1@xuxa.iecc.com>
Source record: 3804
Cross-posted to: rec.radio.broadcasting,rec.radio.shortwave

By Yasmin Assemi

Dixon -- A few miles outside Dixon's core lies the old Voice of America radio station nestled among a web of communication wires.

For more than 40 years, it broadcast in short-wave in 44 different languages to the Far East, Central America, South America's West Coast and Oceania. The typical program was a mix of news, sports, music and cultural information about the U.S. gathered at VOA's headquarters in Washington, D.C.

It was an institution believed in by John Wiswell and Frank Green, the two surviving Dixon residents who worked there.

The station in Dixon and its nationwide counterparts educated people worldwide about America and "let them know what kind of country we were," said Green, a station radio engineer and plant supervisor from 1953 to 1986.

"If (the rest of the world) knew everything about us, we'd be in a better shape than we are now," the 84-year-old said.

It was "kind of a high-pressure job," but Green, a Pearl Harbor survivor, found it interesting work after serving in the Navy during World War II, he said.

"I believe what they were doing was right, and I thought it was pretty wonderful for the government to want them to know what was going on here," Green said.

Wiswell came to Dixon in 1979 and worked for VOA for about a year as a technician. He shares Green's mentality.

"A lot of these foreign countries (didn't know) what Americans were like," Wiswell, 80, said. "It gave the public - the ones who could listen to it - an idea of what (America) was about."

The station hosted contests for listeners and some programs featured announcers who spoke slowly for those who couldn't understand English well.

Russia and other countries often tried to jam programs to prevent people from listening but stopped once the Iron Curtain fell in 1989, Green said.

"It used to be information was not quite as easy to send to bigger countries," Green said. "A lot of countries had their propaganda, but ours was pretty straight."

"They did a lot of good stuff," Wiswell said. "It was not so much propaganda like some of the others. It was factual stuff."

"The main thing was to do the job out there, and if we had problems with the transmitters we had to immediately notify Washington," Green said.

Dixon's station was one of four in California and went on the air under the leadership of NBC in 1944. The government took it over in 1949 and broadcast until the station closed in 1989.

"They wanted a place on the West Coast that was pretty good for transmission (and Dixon was the) ideal spot to have a short-wave transmitting station," Green said.

Voice of America operated under the U.S. Information Agency, which was created in 1942 after Pearl Harbor "to deal with Nazi and Japanese propaganda," VOA spokesperson Joseph O'Connell said.

The Broadcasting Board of Governors operated VOA after the State Department absorbed USIA in 1999. The agency now broadcasts under a charter which requires content to be comprehensive and objective, O'Connell said.

Only two VOA transmitting facilities still broadcast from the U.S. - one in Delano and the other in Greenville, N.C. Wiswell blamed satellites for putting Dixon's station out of business.

"The viewpoint changes from time to time," Green said. "I think now a lot of people feel the United States is very rich and helps out more and if we don't, they don't like us."

State Department officials said there are no records of the government's monetary investment in Dixon's station over the years. A 1977 document obtained by the Daily Republic states the U.S. government had an overall investment of $7 million in the facility.

Green, a matter-of-fact man of few words, gives a good summary of the station's popularity.

"If people like us, they like it," Green said. "If they don't, they don't like it."

People can still listen to VOAs short-wave broadcasts. For more information, visit www.voa.gov.

As noted earlier, though, KYW has a minima, not a null. I suspect (although I make no claims to its accuracy) that the protection afforded the southwest (since it's done with two towers in Whitemarsh, PA, which is to the northeast of City Center) required that the maxima be directed towards Philadelphia and, serendipitously, in the other direction towards Reading, Harrisburg and Scranton. As a result of the minimum towards the southwest, and due to the two-tower design and the need to direct maximum towards Philadelphia, this resulted in a second minimum in the direction of New York. It was this protection which was already in place that allowed WHN to get their pattern and power. So KYW isn't really protecting 1050, and thus a 1-B is protecting a II...the antenna design simply fails to provide converage in that direction, but which still required that WHN (or ESPN 1050) protect KYW to the limits required in the rules.

And WINS (that was a mistake, right?) has nothing to do with this....at 1010, it's far enough away from 1060 that neither station figures in the pattern of the other. Also of note is that WBZ has a directional pattern, but as a 1-A it protects nothing. It's done with a parasitic element suspended from the guy wires, which pulls in the power which would be wasted over the Atlantic.

KKOB-AM, an all-news station in Albuquerque, New Mexico, which operates with 50,000 Watts on 770 kHz, was forced off the air for a time yesterday when a hot air balloon carrying two child passengers became entangled in its 700 feet high transmission tower. The passengers, aged 10 and 14, and 69-year-old pilot Bill Chapel were taking part in the annual Albuquerque International Balloon Fiesta. The three were able to climb down to 100 feet, where they were met by rescue workers with safety gear. The Federal Aviation Administration and National Transportation Safety Board are investigating the incident.

## 2568. Radio Nord from Latvia finally kicking off

Newsgroup: rec.radio.broadcasting
Date: 2004-10-12 02:29:48 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <ckffis$sjd$1@xuxa.iecc.com>
Source record: 3806
Cross-posted to: rec.radio.broadcasting,uk.radio

After years of testing and planning, 945 kHz mediumwave from Latvia should finally come alive under the name Radio Nord. A test transmission is planned to run from 0900 UTC on September 24 until 2100 UTC on September 26. Radio Nord will broadcast in Latvian with an oldies format and should be on the air 24 hours a day from October 1, reports Bernd Trutenau on the mwdx mailing list. Trutenau says that the start was delayed by the certification procedures for the 2.7 kW Blyth transmitter.

Earlier (see DXing.info news in December 2002) http://www.dxing.info/news/2002_12.dx#gold both Radio Caroline) and Radio Gold 945AM were testing the frequency of 945 kHz, and Radio Gold 945AM was planning to start regular transmissions in early 2003.

Also in October, Trutenau reports that KREBS TV is planning to conduct test transmissions on 576 kHz from Kuldiga in western Latvia with 100 kW of power. This frequency will be made available for leasing to foreign broadcasters.

# 2569. US satellite radio - defection to satellite radio may elevate medium

Newsgroup: rec.radio.broadcasting
Date: 2004-10-12 02:29:49 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <ckffit$sjr$1@xuxa.iecc.com>
Source record: 3808

By Diane Toroian Keaggy
St. Louis Post-Dispatch

Shock jock Howard Stern fancies himself the "king of all media,' emphasis on the word "all.' Already a star on the FM dial, best-seller list, silver screen and television, Stern announced Wednesday he's taking his act to satellite radio in 2006. The move will free Stern to crack dirty jokes and utter obscenities without fear of reprisal from his nemesis, the Federal Communications Commission.

But more important, observers say, Stern's defection from terrestrial radio may push satellite radio from obscurity to the mainstream.

"After two years of being 'the other,' satellite radio is developing its own content,' said Sean Ross of Edison Media Research, which conducts surveys for a number of media outlets. "This certainly could drive traffic to satellite radio.'

Two competing companies Sirius Satellite Radio based in New York and XM Satellite Radio based in Washington each program more than 100 stations of music, talk and sports, much of it commercial free. XM is the dominant of the two companies, claiming about 2.5 million subscribers. Sirius has 600,000. Both offer coast-to-coast coverage, so a trucker can start his day in Montana and travel to the Midwest without switching stations or losing the signal.

But this technology comes at a cost. XM charges listeners a $10-a-month subscription fee; Sirius costs $13 a month. Most electronic stores can equip a car with a satellite receiver and antenna for $150; a Sirius-ready boom box costs about $100. Neither company has developed a small, Walkman-like receiver.

In terms of content, each company boasts its own unique programs. XM features NASCAR broadcasts, MTV radio and seven country stations. Sirius hosts NFL football, World Radio Network and 15 rock stations. Both air the Weather Channel, BBC World Service, C-SPAN Radio, CNN and Bloomberg Radio.

Until Wednesday, XM had the upper hand in the high-profile- host category. Last week, it debuted "The Bob Edwards Show' starring the revered, former National Public Radio personality. XM also signed Opie and Anthony, the one-time syndicated shock jocks who got booted off the air after they encouraged a couple to have sex in St. Patrick's Cathedral.

Though Edwards and Opie and Anthony certainly enjoy loyal followings, their popularity pales compared to Stern's. Aired in 46 markets, Stern's show dominates morning ratings among young men. In St. Louis, one out of five men ages 18 to 34 tuned into morning radio listen to Stern. John Beck, the Emmis

Communications exec who brought Stern to St. Louis six years ago, says the show has boosted revenue and ratings on local affiliate KPNT (105.7 FM). He recognizes that fans love Stern. But do they adore him enough to pay for him?

"He has 126,000 listeners here. How many people are obsessed enough to put in the equipment and spend like $150 a year to hear him on their 20-minute commute to work?' asked Beck. "We in the media often have a false sense of our importance. We think, 'What will these people do if we leave?' Well, they move on.'

Sirius Satellite Radio hopes that 1 million of Stern's national following of 12 million fans need their daily fix of Stern's celebrity interviews, political jabs and off-color satire. That's how many new subscribers the company needs to cover the cost of its five-year, $500 million deal with Stern.

Jenny Miller of the Consumer Electronics Association, a leading trade organization, forecasts Sirius should meet that goal. Even before Stern's announcement, the association's 2004 market-potential study estimated Sirius and XM would attract 5.3 million new subscribers in the next year. Miller said Stern's move would boost consumer awareness not only among his fans, but among average folks who still may be a little cloudy about the medium.

"I think this will get people curious,' said Miller. "With any new technology, content is what drives adoption. After all, why would you buy something if it doesn't offer you something new. This shows satellite has something new to offer.'

by William Nicoll

When you take a call on your cell phone, listen to the radio as you drive down the highway, or tune into satellite television at home, you probably take for granted how those signals are getting to you. It was Arthur C. Clarke who so aptly put it: "Any sufficiently advanced technology is indistinguishable from magic." And if you took for granted the technology behind today's wireless wonders, you never even gave a thought to the policy that lets them exist. Welcome to the exciting world of "spectrum policy," in which our representatives in the U.S. government have been laying down the law for almost 80 years.

Spectrum policy has its origins in the Radio Act of 1927, in which Congress established the the Federal Radio Commission, the first regulatory organization for the airwaves. It wasn't for seven years, however, that more comprehensive rules were passed with the Communications Act of 1934. One of the major results of this act was the creation of the Federal Communications Commission, or FCC.

The FCC, under the auspices of the Communication Act, establishes and supervises policy regarding commercial uses of wired and wireless communications in the United States. Over the years, there have been many amendments to the Federal Communications Act to keep pace with technology, but its spirit remains intact.

Unfortunately, the public has very little knowledge of what the FCC actually does. That is because the nature of spectrum policy is very technical, and the effects of such policy aren't readily seen. When was the last time you cared about at what frequency maritime navigation radio or garage door openers operated? With just a little education, this can be changed. We can start with some basic information about the electromagnetic spectrum.

Most people know that light travels in waves. It turns out that light is only one part of a continuum of electromagnetic phenomena; these phenomena are characterized by their frequency, which is a measure of how many times a wave moves from crest to crest in a constant period of time. The accepted unit of frequency is the Hertz (abbreviated Hz) one cycle per second.

By drawing a line that represents low frequencies on the left and high frequencies on the right, one can set up the electromagnetic spectrum and divide it into parts. From left to right, the common bands of the spectrum are known as: radio, microwave, infrared, visible light, ultraviolet, X-rays, and gamma rays. These many types of waves are all just photons of different wavelengths. Over the years scientists have given bands of the spectrum different names for expedience. It is much easier to say "radio

waves" than "500 MHz electromagnetic radiation".

With a basic understanding of electromagnetic waves, spectrum policy becomes a little friendlier. Spectrum policy is primarily concerned with radio and microwaves ranging from 3 kHz to 300 GHz. It is at these frequencies that wireless communication is most viable. For example, you wouldn't want to listen to your favorite rock station on a gamma-ray radio; the sheer energy these high frequencies carry would probably give you radiation poisoning before the song was finished.

Frequencies lower than 3 kHz are also impractical. Because their wavelengths are so large, they would need proportionally larger antennas. The Navy recently closed a 28-mile-long antenna in Wisconsin that allowed it to communicate with ballistic missile submarines deep under the ocean.
With the battle lines drawn, the question remains who gets which frequencies. Many people compare the spectrum to a natural resource, like oil; its distribution is very important. The government reserves almost 70 percent of the usable spectrum for itself. Every government radio application, from military satellites and forest ranger walkie-talkies to CIA communications and air traffic control, takes place on these reserved frequencies.

Not surprisingly, a separate agency is responsible for government allocation of frequency: the National Telecommunications and Information Administration (NTIA). The FCC has no control over use of these government frequencies. There are several rationales behind this: Reserving a wide band of frequencies for themselves ensures that the government will never have to pay third parties for communications. The NTIA, in the interests of national security, can keep the usage of certain frequency bands classified. The downside of this is that very little oversight exists to see if these frequencies are being used efficiently.

The remaining 30 percent of the radio spectrum is doled out by the FCC. They classify frequencies in two ways: licensed and unlicensed. Unlicensed spectrum may be used by anyone, anytime. Unfortunately, there are no guarantees against signal interference with unlicensed spectrum. This usually isn't a problem with unlicensed spectrum because many devices operating on these bands are low power, such as cordless phones, EZ-Pass tags, wireless LANs, and microwave ovens.

Licensed spectrum makes up the bulk - 98 percent - of the frequencies given out by the FCC. Cell phones, radio, and television are the primary users of licensed spectrum, and they are big business. Television advertising revenue in 2001 was over $35 billion. Radio had almost $20 billion in revenue. With this kind of money, politics are bound to get involved, and the FCC hasn't escaped. Over the years, companies have lobbied the FCC for use of certain frequencies - say, the 2 GHz range for satellite radio. It used to be the case that companies would get what they wanted. Until the last decade or so, unused frequencies were still available, but that is no longer the case.

Today, frequencies are becoming scarce. Consequently, they're becoming much more valuable. This forces companies to innovate more efficient uses of

spectrum, so we've seen many advances in communications technology. Even so, the value of certain frequencies has skyrocketed - up to $1 billion per MHz for certain bands in cellular use. Some people have begun to question why the FCC was giving away such valuable frequencies as political favors, so they responded by forming an investigative group known as the Spectrum Policy Task Force. It is this group's job to evaluate 80 years of policy and determine where reform is needed. One recommendation they've made is the increased use of spectrum auctions, where frequencies are sold to the highest bidder. The Bush administration hopes to make over $25 billion on spectrum auctions in the near future. Keep that in mind the next time you are on your cell phone and you hear someone say "Talk is cheap."

The US Broadcasting Board of Governors is soliciting bids to supply a mediumwave transmitter for installation in the Turk and Caicos Islands. The solicitation is for a "50 kW all solid-state MW transmitter with adjustable RF power output capable of being installed and operated in an existing facility on the Turks and Caicos Island; the transmitter shall be a stand-alone device requiring only primary mains power, a conditioned operating environment, and a RF output load; the carrier frequency shall be 1570 kiloHertz." Turks and Caicos, a British territory, is situated roughly 90 miles (145 km) northeast of Cuba.

For several decades there was a radio station in Quebec City in Canada on
1060. Perhaps KYW had to protect this station before 1050 came on the air in
New York. (This station in Quebec may not be on the air now).

A few in our area -

WNBP = Newburyport, 1450 AM = NBP, obvious
WBOQ = Gloucester, replaced WVCA (Voice of Cape Ann), WBOQ orignally was an all classical station and the BOQ was to represent "Bach".
WCCM = Haverhill, 1490 AM. The station was orignally at 800 khz in Lawrence. "CCM" was supposed to somehow represent "800" in Roman numerals. It's a stretch.
WLLH = Lawrence and Lowell (two synchronous transmitters at 1400 am) = Lowell, Lawrence, and Haverhill, but Haverhill never got a transmitter
WPAA-FM, Andover - Phillips Andover Academy, a low-power class D that's still on the air

.

## 2575. B04 schedules - or tenative plans?

Newsgroup: rec.radio.broadcasting
Date: 2004-10-12 02:29:55 UTC

B04 schedules. No, these are drafts of tentative schedules that could still have changes. Officially, those taking part in the HFCC Conference are not supposed to issue this stuff ahead of time, as the coordination procedure continues right up to the start of the B04 period. Usually a few days after that, the public version of the schedule is published at <www.hfcc.org/> . Subsequent changes are not usually published. At Radio Netherlands, we do not publish tentative versions of our schedule, but we do try to be as quick as possible in publishing actual changes once the schedule has commenced.

(Andy Sennitt-HOL, dxld Oct 1)

If I may say so this is a ridiculous state of affairs. How on earth do international broadcasters expect listeners to know what freqs to tune in on in if they don't publicise schedules before they take effect? By taking this action the HFCC is completely disregarding the interests of listeners, clubs and indeed publishers who need this information in advance. They should ensure that their "coordination procedures" are completed in suficient time to enable stations to publicise their schedules well BEFORE they take effect. SW listening is decling enough as it is without HFCC procedures getting in the way of providing this essential information to listeners.

(Dave Kenny-UK, dxld / BrDXC Oct 1)

Not knowing the dates when KYW moved to Philadelphia, or when the "NARBA" was ratified, I assume that the move of KYW occurred well before the "NARBA"? If this is the case, how did the KYW pattern come to have such a deep null towards WINS, which wouldn't have even existed at the time?
>>

NARBA was signed in 1939 and was implemented in 1941. It was in 1941 when the great AM frequency change occurred, and when stations in the same market could be reduced to 40 kHz from 50 kHz spacing.

I believe the move of KYW to Philadelphia from Chicago occurred after two stations were consolidated into one (KYW) in Chicago, but before the 1050 Class II-B assignment in New York was agreed to.

However, before NARBA, 1050 was a U.S. de-facto Class I-A clear (KNX, Los Angeles), and the ceding of 1050 to Mexico as a new Class I-A clear for that nation, and the allocation (but not the construction) of a Class II-B to New York would have been simultaneous with the codification of 1060 as a Class I-B, in-fact, in Philadelhia and a similar station in Mexico City.

So, these changes could have been (and probably were) coordinated.

KYW's prior operation in Chicago, and its early operation in Philadelphia was 10 kW ND-U, on 1030.

# 2577. Ireland - radio titans fight to be next big hit

Newsgroup: rec.radio.broadcasting
Date: 2004-10-12 02:29:57 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <ckffj5$sl9$1@xuxa.iecc.com>
Source record: 3817

The Sunday Times - Business
October 10, 2004

Some of the biggest egos in the country will cram into the Conrad Hotel in Dublin tomorrow when two wannabe broadcasting groups go head to head in a public hearing for a licence to run an alternative rock radio station in the capital.

Phantom FM has the backing of Paul McGuinness, the U2 manager, Trevor Bowen, his business partner, and Denis Desmond, founder of McD, Ireland's biggest concert promoter.

Zed FM, a consortium headed by former FM104 boss Dermot Hanrahan, also features a formidable line-up including Niall Stokes, publisher of Hot Press magazine along with Jim and Peter Aiken, the well-known concert promoters. Bob Geldof, the rock star turned global anti-poverty campaigner, completes the team.

The meeting is considered crucial, as it will be the last chance the protagonists have to influence the Broadcast Commission of Ireland (BCI) before it awards the licence next month for a station that is expected to begin transmitting next July...

Of the stations broadcasting in Dublin, Q102, Spin FM, NewsTalk and Country FM have yet to turn a profit. All are recent entrants to the market and opinion is divided as to whether or not an alternative rock station can be profitable.

"At best they'll have a 4% market share..." says Al Dunne, a former shareholder in Lite FM before its ?15m purchase in 2002 by UTV, the Belfast-based broadcaster. Dunne now runs Unique Media, which represents Q102, Lite's new brand, Ocean FM, which recently hit the airwaves in the northwest last week, and Beat FM, the regional station in the southeast...

Hanrahan, Zed's chairman, is obviously among the believers and said extensive research had shown an appetite for seminal Irish music, British alternative rock and punk/new wave alternatives among other genres. He is confident there is a listenership for little-known artists such as Nina Hynes, The Things and Halite.

"We've done our projections and we're confident that this can be a station that will turn in a profit of a few hundred grand each year," he said. "There's plenty of experience in the consortium. I was involved in FM104 when it launched in 1989 and Jim Aiken was a shareholder. Hot Press has arguably been the only outlet for rock in Ireland for years so we know what we're doing. We're not in this for the short haul." ...

Commercial radio has proved to be a nice earner for many investors since it took to the airwaves in 1989 but the likely introduction of new licences throughout the country could change the landscape over the next five years.

> As noted earlier, though, KYW has a minima, not a null.

OK, strictly speaking I suppose a "null" goes to zero so the minima to the
northeast in KYW's pattern would not be a "null" strictly speaking, but it
is a relatively deep "minima", 20 dB or so as compared with the minima of
less than 5 dB to the southwest. I suppose it is sloppy thinking, but I
tend to think of "minima" that deep as "nulls".

> I suspect (although I make
> no claims to its accuracy) that the protection afforded the southwest
(since it's

City Center)

Isn't KYW's transmitter more to the northwest of the city center, not the
northeast?

> required that the maxima be directed towards Philadelphia and,
serendipitously, in

need to direct
> maximum towards Philadelphia, this resulted in a second minimum in the
direction of
> New York. It was this protection which was already in place that
allowed WHN to get
> their pattern and power.

The two tower array doesn't require a deep "minima" to the northeast just
to achieve a shallow "minima" to the southwest, there is a reason of some
sort that KWY has a deep "minima" to the northeast, and I suspect it is
spelled WHN/WEPN. If I had owned KYW at the time I would never have put a

deep "minima" in the pattern to the northeast unless the FCC made me do it for some reason, otherwise it doesn't make any sense.

> So KYW isn't really protecting 1050, and thus a 1-B is
> protecting a II...the antenna design simply fails to provide converage in that
> direction, but which still required that WHN (or ESPN 1050) protect KYW to the limits
> required in the rules.

But if KYW wasn't required to protect 1050 then why does "the antenna design simply fails to provide converage in that direction"? The antenna system would be no more complicated if the "minima to the northeast weren't there, and it would probably be operationally simpler to boot.

> And WINS (that was a mistake, right?) has nothing to do with this....at 1010, it's
> far enough away from 1060 that neither station figures in the pattern of the other.

Yes, WINS was a mistake on my part, I became briefly confused about which station was which.

Thanks, I saw the coverage on TV but they never said what station it
was. It looked like an AM stick so I figured they'd have to power down.
good thing they didn't hit an FM/TV stick....if they'd grounded out the
elements they may have been crispy-fried!

Yes, KYW seems to have moved from Chicago to Philadelphia in 1934.

So it would seem. Do you know if there are any other class A (I) stations that protect adjacent channel class B (II) stations in this way?

> 10 kW ND-U, on 1030.

A 10 kW omni signal would have been much stronger to the northeast than the current KYW signal.

# 2583. WRCG DX test

Newsgroup: rec.radio.broadcasting
Date: 2004-10-13 03:12:35 UTC
From: ircamember@ircaonline.org
Message-ID: <cki6f3$otn$1@xuxa.iecc.com>
Source record: 3819
Cross-posted to: rec.radio.broadcasting,rec.radio.shortwave

I have been asked to announce this upcoming DX test...

Saturday, October 22, 2004 - WRCG-1420, Columbus, GA will conduct a DX test from 12:00 am - 1:00 am EDT. The test will include Morse code IDs. The station normally runs a news/talk format. A loop of the code and the voice version of the code will be played, with the two alternating code/vocal/code/etc. The station regularly runs at 5 kW ND.

Reception reports(with return postage) may be sent to:

WRCG ANNIVERSARY TEST
1353 13th Ave.
Columbus, GA 31901
OR
E-mail: BGRAY@ARCHWAYBROADCASTING.COM

PLEASE send reception reports - a special QSL card for this 75-year-old station will be sent in return (with return postage and address, of course). The station is relocating in the near future, and the CE is hoping to test again at the new site once that is in operation.

(Due to some personal issues, I am unable to do CPC for IRCA this season; I will, however, do my best to respond to DX test announcements sent to me directly at the ircaonline.org address. If you are interested in volunteering to arrange DX tests, please contact me at the ircaonline.org address (i.e. thru the IRCA website) and I will direct your message to the IRCA president, Nick Hall-Patch. Thanks!! -Lynn.)

Interesting that the BBG is involved in this. There has been a 1570
station there in the past but IIRC it was a private religious outfit. I
wonder if the BBG plans to take it over for Radio Marti broadcasts?

A mystery Marti relay is being heard on 1620KHz; DXers strongly suspect
the BBG is buying airtime on commercial station WDHP in the U.S. Virgin
Islands. (as WDHP vanishes when the mystery Marti relay is on!)

Why? Groundwave coverage is the principal means of AM station listening.

Dunno about the ship, but they're still broadcasting...
>>

KKOL's most recent STA to broadcast from the ship expired on 10/9/2004, three days ago.

There is no record of KKOL applying for permission to operate its application for 50 kW, DA-2.

I presume KKOL will apply to extend the operation from the ship, yet again.

Although (at the risk that I'll trigger another lesson by Mr Fry about antenna
theory) even the term "groundwave" is misleading. Groundwave propagation is due to
the refraction of the wavefront by the earth....this is one of the reasons why lower
frequencies have a longer groundwave pattern, and why, in the extreme low frequency
band, it goes clear around the earth. The effect is also evident at VHF and higher
frequencies, like the 950MHz STL band. Objects presented to the wavefront (like
mountain ridges) which are similar in size to the wavelength will bend the wavefront,
which results in the limited ability to design an STL path which is (slightly) over
the horizon. It's called "razor's edge" propagation then.

Source record: 3845

>>
So it would seem. Do you know if there are any other class A (I) stations that protect adjacent channel class B (II) stations in this way?
>>

Other Class II-Bs that receive protection from Class I-Bs include WLAC protecting Boston's 1510.

Other Class I-Bs that now protect other Class I-As or Class I-Bs include WSAI/1530, protecting Buffalo's 1520 (first adjacent) and Bahama's 1540 (also first adjacent). (KXEL/1540, a Class I-B, also protects the Bahamas, and has from the git-go, even though the Bahama Class I-A operated with 5 kW, later 10 kW, and now 50 kW ... when moving to 50 kW, as required by "Rio", the Bahama Class I-A installed a DA to protect KXEL, and perhaps the Class II-B in Albany, NY).

KYW's DA-1 pattern appears to be similar to WRVA's DA-1 pattern, but it it not.

WRVA's is a side-fire, and is symmetrical in two axes.

KYW's is an end-fire and is symmetrical in only one axis.

The nulls towards 1050 are filled by a little. They could be made equal to zero by a minor parameter change.

The minima towards Mexico is a characteristic of the wide spacing of the towers, and is not controllable except by reducing or increasing the spacing between the towers.

The fundamental point here is that KYW's groundwave is protecting the groundwave of a station of lower class, located somewhat less than 100 miles away from it.

If KYW were to change its pattern to loosen it up towards 1050, it would be interfering with a station which was authorized by an international treaty.

Usually, international treaties trump national regulations.

In the Greater Antilles, there is not good east-west propagation. The 1620
station on groundwave barely makes footfall in Puerto Rico, which is 700
miles or so from the closest part of Cuba. And at night, reception of a 1 kw
on 1620 would be really bad in Cuba.

## 2592. digilink 3 extended switcher

Newsgroup: rec.radio.broadcasting

From: dunker@wkyx.com
Message-ID: <ckkrd6$fkn$1@xuxa.iecc.com>
Source record: 3843

We're using a digilink 3 with the dlsw7ex extended switcher, and for some reason, it is working only on every other channel. It did work on all 7 previously, and during a remodel of the control room, when we hooked it back up, it would only work on every other channel. We have 2 or 3 of these switchers, all have the same malfunction, so we figure it can't be the switcher itself.
We can't buy new automation, digilink free will be no help (too many different satellite sources). any ideas?

## 2593. Antex & PLX cards

Newsgroup: rec.radio.broadcasting
Date: 2004-10-14 03:22:15 UTC
From: Ryan Underwood <nemesis@icequake.net>
Message-ID: <ckkrd7$fkp$1@xuxa.iecc.com>
Source record: 3830

I have a client who is running a FM station. He is looking to upgrade his main computer. It is running an older version of the BSI WaveStation software. It has all the normal PC stuff, with the addition of an Antex SX-36 audio card, and a PLX PCI-9050 card.

The Antex card is ISA, which would be tough to put in a newer computer since they don't come with ISA slots anymore. Does anyone know of a functional equivalent to this card but PCI instead? I'm not familiar with the connector it uses. It looks like a DB-9 with various wires connected directly to their mixing board.

I can't find any information about the PLX board at all. I don't know what it's used for, and neither do they. It has what appears to be a very wide D connector on the back (don't recall the pin count), but nothing was connected to it. Is it safe to omit this board in the upgrade?

Thanks for any help!

## 2595. Bad news for Short Wave Listening

Newsgroup: rec.radio.broadcasting
Date: 2004-10-15 01:32:18 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <ckn9b2$cdl$1@xuxa.iecc.com>
Source record: 3831
Cross-posted to: rec.radio.broadcasting,rec.radio.shortwave

WASHINGTON (AFX) - Federal regulators on Thursday gave the go-ahead to a new technology that enables powerlines to offer Internet access. They also adopted
a
rule that makes it easier for the Bell local phone companies to replace their
copper wires with fiber.

Michael Powell, the Republican chairman of the Federal Communications Commission, said the rules are aimed at speeding up the construction of high-
speed networks.

His point was illustrated shortly after the FCC vote, when SBC Communications
said it would "dramatically" speed up its plan to construct a fiber-based network that reaches 18 million households.

Yet critics such as FCC Commissioner Michael Copps, a Democrat, argue the new
rules will limit competition, keep prices unnecessarily high and confuse investors.

Electric issue
The power line decision was meant to address concerns about interference. The
FCC set specific rules for power companies on how to avoid interference, especially with amateur radio operators.

The agency avoided the imposition of stricter rules regarding emergency 911, disability access and contributions to universal service, a fund that subsidizes
phone service in areas where it is expensive to deliver.

"By crafting a minimal regulatory framework," Powell said, the FCC is advancing
a pro-competition agenda that will make high-speed Internet access a reality for
almost every American. He noted that power lines go into nearly every U.S. home.
Copps, who partly dissented with the decision, argued that the FCC's failure to
address the stickier issues might actually hinder growth of powerline technology. He said the threat of future regulation may make investors leery of

getting involved.

"If we want investment in broadband over power line, we need certainty and predictability," he said.

Fiber rules
Copps also objected to a new rule that exempts fiber "loops" in all residential
neighborhoods from an FCC requirement that guarantees open access to competing
Internet service providers.

The local loop is the mass of wires that extend from the nearest central switching office of a local phone company to the homes and businesses it serves.
The new exemption only applies to high-speed Internet service delivered by fiber
connections to homes. It expands on a prior rule that exempted new residential
developments hooked up with fiber.

Yet network operators still have to let rivals use copper and fiber wires to sell regular phone service to consumers. That rule stems from a major 1996 law
whose aim was to foster competition in the local phone market.

Still, the vote reflects a big victory for the Bells. They have argued that there's little incentive to spend big bucks to replace copper with fiber if rivals can use those fiber connections as well. Fiber offers much greater Internet speeds and the promise of new services such as pay TV over phone lines.

The three Republicans on the five-member FCC board proved sympathetic to that
argument. They say fiber loops ought to be exempted so investment won't get stifled.

Still, the FCC board did require the local carriers to ensure that the fiber loops extend to within 500 feet of residential homes.

Industry reaction
Copps and fellow Democrat Jonathan Adelstein said the rule is a setback to competition.
"The local loop represents the prized last mile of communications," Copps said.
"Putting it beyond the reach of competitors can only entrench incumbents who already hold sway."

Consumer groups also blasted the decision.
"The FCC today took our country one giant step closer toward solidifying a two-
company domination -- the local cable and telephone providers -- over the consumer Internet market," said Gene Kimmelman, senior policy director of

Consumers Union.
The Bells, on the other hand, reacted with jubilation. Shortly after the FCC vote, SBC said it will "dramatically accelerate" plans to build a fiber-based
network "in two to three years rather than five years as previously announced."
The fiber would replace copper in many parts of the network and offer the promise of "super high-speed data, video and voice services," SBC said.

This story was supplied by CBSMarketWatch. For further information see www.cbsmarketwatch.com.

## 2600. Salem to pay $10M for Miami radio station

Newsgroup: rec.radio.broadcasting
Date: 2004-10-15 01:32:27 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <ckn9bb$cjc$1@xuxa.iecc.com>
Source record: 3838

Camarillo-based Salem Communications Corp. is buying WKAT-AM (1360 AM) in Miami from Classical 1360 LLC for $10 million.

Salem is a radio broadcaster focused on religious and family programming.

After closing on the Miami station, Salem will own 101 radio stations, including 62 stations in 23 of the top 25 markets. This will be the company's entrance into the Miami market.

In addition to its radio properties, Salem owns Salem Radio Network, which syndicates talk, news and music programming to over 1,600 affiliated radio stations; Salem Radio Representatives, a national sales force; Salem Web Network, an Internet provider of Christian content and online streaming; and Salem Publishing, which publishes Christian-themed magazines.

Last week, Univision Communications Inc. said it plans to exchange four radio stations that serve the Chicago, Houston, Sacramento and Dallas markets for assets of Salem stations in the Chicago and San Francisco areas.

Dunno if it's still standing, but it used to be bisected by Highway 113
about 10 miles south of town. Towers and poles all around, wires
stretched out like a streetcar yard.

You may wish to check out http://www.airwaves.com/archive3/v9_%2035.html
for some earlier discussion on using other sound cards with WaveSttion.
It may be a matter of calling the BSI folks and seeing if there is anything
modern that is supported, or it may be a matter of trying cards until you
find one that works.

The Antex is just a 16-bit stereo soundcard, nothing too fancy.

>I can't find any information about the PLX board at all. I don't know

It's a dual parallel port. The PCI-9050 is actually the chipset, so there
is probably some other manufacturer's information on the card.

MT,

The old VOA Dixon Site is now owned {Leased} by Globe Wireless.
http://www.globewireless.com/
Coordinates: 121.45W & 38.23N

Large Navy Antenna Farm in N. California
http://lists.contesting.com/archives/html/Towertalk/2001-07/msg00609.html

NOTE: In 2001 there were "Rumors" of that a 'super antenna array'
[HAARP] was installed near the Dixon area.

THE GLOBE WIRELESS NETWORK
- by Ary Boender - from Worldwide Utility News (WUN)
Globe Wireless at Dixon, CA.
http://www.wunclub.com/wunstr/wunstr9604.html
ABOUT - Globe Wireless at Dixon, CA.
Dixon Transmit Site Globe Wireless has acquired a radio transmitting
location previously used by the VOICE OF AMERICA. The former DIXON
RELAY STATION, located eight miles Southeast of Dixon, California,
will be used to connect vessels in the Pacific Ocean with land based
electronic mail systems, including the Internet. The history of the
Dixon Relay Station goes back more than fifty years. Construction
began for the radio transmitting facility at the 640 acre Dixon site
in 1943. The Voice of America used the Dixon location, starting in
1944, to broadcast information and entertainment to short- wave radio
listeners in Asia and the Pacific. Until 1963, the NATIONAL
BROADCASTING COMPANY (NBC) operated the site under contract to the US
Government. Transmissions from the Dixon Relay Station ceased in 1983.
The VOA used three COLLINS 250 kilowatt transmitters and two GENERAL
ELECTRIC 100 kilowatt transmitters when the facility was operational.
Still remaining on the site are two massive dipole curtain arrays and
ten rhombic antennas, most still in operating condition. Skeletons of
the GE and Collins transmitters also remain. Globe Wireless plans to
install transmitters and antennas for its maritime public coast
station KFS at the new site. The current KFS transmitter location, in
Palo Alto, California, will be phased out of operation over the next
few years. According to company officials, Globe Wireless may also
relocate the transmitters for public coast station KPH to the new
Dixon location. Transfer of that station's license to Globe Wireless
from MCI INTER- NATIONAL is pending FCC approval. The MCI station
currently transmits from Bolinas, California. AERONAUTICAL RADIO, INC.
(ARINC) will sub-lease space at the Dixon site from Globe Wireless.
ARINC is installing transmitters to communicate with the flight crews

of aircraft flying over the Pacific Ocean and South America.

If my sketchy documentation is correct, the extended switcher
communicates with the DL3 over a 9-pin molex connector cable.
How it choses which of the 7 audio channels is accomplished by
logic levels on three of those 9 pins. If the lowest bit wire
is not connected properly, it could certainly eliminate every
other source.

Cut to the chase: it could be the cable.

By James Benedict (N8FVJ) on October 15, 2004

Although many hams do not have that 'You done me wrong' attitude like in a country song, it does surface a lot in this hobby.

I believe the negative attitude is contributing to the shrinking ham hobby. This is highly visible in replies to articles, eHam Product Reviews and the eHam.

Even honest eBay sellers like myself have issues with hams complaining via feedback. If a carrier damages a box and the item inside is undamaged, I get a neutral. Or an item was lost, full refund issued and a negative resulted within 24-hours after receipt of funds. How about a ham that purchases two new tubes, one tube is missing the box & items listed as used tubes.

Complaint on the feedback was issued & items were sold about 25% of market value. This is 3 of 6 sales in the last 8 months. 1000+ sales to audiophiles resulted in three neutrals & no negatives. I did not post the above as a complaint, just the facts.

Hobbies are pursued for the fun element. With an 'outsider' looking in, is it any wonder some pursue other avenues? Or others simply leave the hobby. An example of another hobby is the audiophile interest. Lets narrow it down to vacuum tube audio. This is a very small group within the hobby itself. Quite frankly, the hobby is expanding unlike ham radio. The audiophiles are pleased to have new products and are supportive of the suppliers. A group of DIY audiophiles are learning electronics as fast as they can and building their own equipment. The DIY type musicians group is also learning electronics to build amplifiers.

One business that used to be involved in ham radio was Amp Supply many years ago. I remember when these quality RF amps were viewed with rumors of poor quality. Now these vintage RF amps not only sell quickly, demand way outstrips supply. I have had excellent performance from Amp Supply products.

The owner of Amp Supply quickly got out of the ham business and settled on making a good living in the audiophile hobby over the last 12-15 years.

In closing this article, I suggest the hams should support their suppliers and retailers. Stop shopping for that last dollar in savings and simply refrain from complaining about nothing. It is not good for the hobby.

On a very vaguely related subject...

The Canadian Radio-television and Communications Commission (CRTC) has=20
denied an application for a new 14,500-watt religious station in=20
Kawartha Lakes, Ontario. (near Peterborough)

"The Commission finds that the supporting intervention filed by Salem=20
raises several questions with respect to the financing of the proposed=20
undertaking, particularly regarding the source of funding for the=20
installation of the station=92s transmitter. The Commission would have=20
expected this information to have been filed by the applicant as part of=20
the application process."

Salem had agreed to build the station's transmitter facility and lease=20
it back to the licensee; they then filed comments supporting the=20
application.

Hi The Antex SX-36 Card is a 16 Bit Audio card that featured a
Hardware Audio Decoder and Dual Stereo Outputs. At the time processor
speeds were too slow to decode audio streams so a dedicated DSP on the
audio board handled that.
The modern replacement is an Antex LX-24M. (
http://www.antex.com/products/prof_audio_broadcast.html )
Other Brands are available too probably for less money, I recently
used one with software similar to WaveStation from ECHO I picked up at
the local Guitar Center Music store.

PLX PCI-9050 is a Chip set used on a Bard, My guess having worked with
BSI systems is what you have is a Parallel I/O card used to trigger
the Software. It is nothing like a Parallel Printer Port. If it
was being used it would be connected to a Satellite receiver to
trigger Stop sets and Liners or to switches on the Console for the
same purpose. These types of boards are common to Industrial,
Laboratory Automation systems.

If they are still going to use the BSI WaveStation I suggest
contacting BSI for suggestions about what they are using today.

# 2613. Radio Free Moscow (USA) Is On The Air

Newsgroup: rec.radio.broadcasting
Date: 2004-10-16 16:58:57 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <ckrk0h$gak$1@xuxa.iecc.com>
Source record: 3753

Moscow - Idaho
October 15, 2004
By Greg Meyer

Several years ago, the Federal Communications Commission (FCC) announced it was taking license applications from groups who wanted to start non-commercial, low-power FM radio stations in their communities. That's when a small band of radio people got together in Moscow, with the idea of starting an independent, free-form station. The result is a brand new 100-watt FM station which is now on the air - KRFP-FM.

Borrowing the catchy tag line Radio Free Moscow from the good old days of KUID-FM, free-lance radio reporter Leigh Robartes and some like-minded folks set out back in 2001 to make their dream a reality.

"Because of the homogenization of radio, and because of the large chains that sometime own more than 1,000 stations in this country, localism has gone out of radio," said Robartes.

KRFP has been on the air since Tuesday, and can be heard throughout Moscow and even out into the countryside. Leigh Robartes is thrilled, but admits it has been a long road getting to this point.

"We were up against an FCC-imposed deadline in late November," he said. "If we weren't on the air by a certain date we would have lost our license opportunity forever. We had 18 months to get on the air, and we made it in about 16 and a half months."

The station is located upstairs in the 100-year-old Anderson building in downtown Moscow. And there is still plenty of work left to do before holding any kind of open house.

"You know, we have to adjust levels," said Robartes. "We have to hook up the turntables and the tape decks. We have to move computers around. We have to get our automation system going, because, in the middle of the night, we're going to probably run on automation, at least until we get enough DJ's to run 24 hours."

Some $20,000 needed to be raised to get the station on the air and fund raising is ongoing to keep it on the air. Volunteer DJs, talk show hosts and field producers are still needed to round out the programming schedule. Robartes said the focus will be on providing the community with a variety of news, information and music.

"We're planning on having a local news department," he said. "We're going to go around and record local events, like panel discussions. We did the candidates forum, which has already aired, with the League of Women Voters.

We're going to have call-in talk shows. We have two phone lines, so we definitely want to engage the community in community issues. And, of course, we're going to have music shows."

So, if you're in Moscow or driving through Moscow, and you want to tune in to a brand new station, just set your FM dial to 92.5 and check out Radio Free Moscow.

Anyone interested in helping out the non-profit organization that operates the station can call them at (208) 892-9300 or visit their web site at: http://www.radiofreemoscow.com

This is, in my opinion, a gimme by the FCC to the power distribution companies who want into an industry far above the old technologies they're in now. I've said for years, when a British firm was doing trials, that this technology would never work - that the power lines, being unshielded, would be both a source of interference and prone to noise and intermodulation from the alternating current being transferred by the lines' primary function. The trials were scuttled prematurely, for all these reasons. The fundamental problems still exist, and the methods needed to work around them require equipment which interfaces and/or is raised to lethally high voltages. To maintain the system would require conventional power linemen, wearing gloves and other protective clothing. You can imagine what level of service is to be expected under these circumstances. Further, as power lines are the top-most utilities on a utility pole, they're most prone to lightning hits, as well.

I'd stay away from this, if an investment opportunity were to come around. It wouldn't be the first time the FCC has type-accepted a failed technology, and it wouldn't be the first time that a proposed standard's supporting technical documentation wasn't "cleaned-up", if you know what I mean, so as to demonstrate to the Commission that it met the requirements necessary for type-acceptance.

# 2616. US 'Radio Italia' marks 40th year

By Patrick Cloonan, Daily News Staff Writer
October 15, 2004

Forty years ago, on New Kensington's old WKPA-AM 1150, a native of southern Italy began offering a taste of the old country to fellow immigrants. It was a taste that soon would have the flavor of a new sound from another part of Europe - the Beatles' invasion of the English-speaking musical world.

"The worldwide music changed, too," Sal Patitucci said. "Even in Italy, you cannot hear the old romantic music."

In case you wonder, there's even rap in Italian.

"Music is a mood, that's all that is," Patitucci said on the 40th anniversary of "Radio Italia," now heard from 5 to 6 p.m. weekdays and 1-2 p.m. Sundays on WKFB-AM 770.

"As a matter of fact, you can listen to my Italian program, without saying, 'I cannot understand the words,'" Patitucci said. "You will enjoy the music, even if you like rap, even if you like rock 'n roll. If you go today to Italy, and you find a jukebox, 95 percent is American music. The Beatles changed the way of thinking, musically."

Patitucci is retired from 28 years with U.S. Army Corps of Engineers. In February, he left a longtime berth on WEDO-AM 810 for a new home in WKFB's North Versailles Twp. studios.

WKFB offered a better rate, to an ethnic broadcaster who in turn goes out and sells commercial to pay for that time.

"I still have a good relation with the people on WEDO," Patitucci said. "As a matter of fact, (General Manager) John James is a very good friend of mine. It was just an economic (matter) because today everything is higher."

WKFB is the latest stop in a career that included WKPA (now WGBN), WMBA-AM 1460 in Ambridge, WHJB-AM 620 (now WKHB), WDUQ-FM 90.5 and WYEP-FM 91.3.

There also was television, a weekly show from 1974 to 1979 on WPGH-53. Ethnic programs have disappeared from local television, but technological advances - satellites and digital cable - can bring foreign language programs into living rooms around the clock.

"I have RAI 24 hours a day," Patitucci said. "I can watch a soccer game from Italy, I can watch the news live from Italy."

As was the case at WEDO, Patitucci is part of an eclectic mix on WKFB, including doctors' shows, weekend car care talk, sports, religion and

oldies. "Radio Italia" is the only ethnic show on AM 770, while AM 620's mix includes polka shows that fill 10 hours every Saturday.

"After 1964, '65, '70, the Italian immigration is changing," Patitucci said. "Now, you find doctors and professional people."

Some things haven't changed - there's still news from RAI, the Italian national network. And the program still shifts with a daytime-only schedule - effective Nov. 1, to a 3-4 p.m. slot.

Patitucci has done several programs carried by RAI on its international shortwave service, and hoped to do it again. "It was a beautiful way to talk to the community around the world."

Meanwhile, there's the Italian community covered by WKFB's signal, reaching from Youngstown, Ohio, to Cumberland, Md., and from Fairmont, W.Va., to Punxsutawney.

For it, there are interviews, such as a recent talk with an official from Italy's Calabria region that was reported in detail this week on a Web site there (with several references to Patitucci and WKFB). There's also a daily calendar - and there's music.

"I have to play music for everybody," Patitucci said. "For instance, Monday, after the news from Italy, I play the oldies. On Tuesday, I play folk music. On Wednesday, I might play, for instance, a Neapolitan song.

"And also I play the hit parade every day." It is a selection as varied as "Radio Italia," a show that continues to appeal, as Patitucci put it, to "toti gusti." To all tastes.

Pirate Radio 603 AM is currently broadcasting from the St Paul radio-ship on 603 kHz AM from and for Mariehamn on the Aland Islands, inbetween Finland and Sweden.

Listeners from further afield can use the internet to listen to a 24k audio stream on Winamp or Real player. Listeners wishing to use Windows Media Player will have to start WMP and then select 'File', then 'Open URL' (this can also be accessed by the shortcut Control+U), then type in http://213.204.48.205:8000 and press 'Play'.

During live shows, MSN Messenger or Windows Messager can be used to type messages directly into the studio. Open MSN/Windows Messenger, select 'Contacts', then 'Add Contact'. Follow the instructions and specifiy the new contact is pirateradio603@hotmail.com.

E-mail can be sent to mikespenser@hotmail.com but make sure the subject includes something about Pirate Radio 603 AM to avoid him thinking it is another Viagra advert!

Other valid e-mail addresses include pirateradio603am@hotmail.com or for Mike West, mikewest@rtidigital.com

I went to school in Woodland, about 20 miles north of Dixon. Had the
fortunate opportunity to visit the Dixon VOA transmitter site (this
was in 1970). Our physics teacher had connections, I guess.
I was sorry when VOA closed it down.

I suspect politics are behind it. Not the political differences between liberals and conservatives or the presumed differences between Demorcrats and Republicans. It's the politics of opportunism. Anyone who acts to restrict BPL on technical grounds will be called a "thief of broadband rights" and "a pawn of the telecommunications establishment".

The FCC commissioners put themselves into a no lose situation by allowing BPL. If it works, they take the credit. If it fails, they don't get the blame.

>The fundamental problems still exist,

Thank you for making sense.

[snip]
>
> I'd stay away from this, if an investment opportunity were to come around.

[snip]

One of the major BPL suppliers has publicly traded stock. They've gone through a big decline, and are a penny stock now. A terrific buying opportunity for those who are certain BPL is the next big thing!!

I was reading that article and the replies. I think this poster sums it up very nicely about many in this hobby and group. I love it. Hit it Right on the head. Very good.

Ham Radio Attitude Reply
by EHAM_GUEST_001 on October 15, 2004 Mail this to a friend!
As far as the ham attitude, it does suck. Hateful people in it.

As far as buyers complaining on eBay, you should sell adult toys and videos. People that get some every now and then have much better attitudes than the loser, non-bathing, obese, antisocial and self righteous individuals in this hobby that get none.

Unfortunately we didn't find out about it till this morning, but Dutch commercial broadcaster Radio 227 has started a weekly programme on the history of offshore radio. The first one was broadcast yesterday evening. The programme, called 'Laissez Faire' [the name of the ship from which the original radio 227 broadcast in the 1960's] is aired between 2000 and 2200 local time on Saturdays. It includes audio fragments and music of the time. Next week Thijs Lieffering, who was one of the first DJ's on Radio Dolfijn, will be the studio guest and will talk about his memories and experiences. Presenter Look Boden is interested in hearing from anyone from the era who would like to contribute. He can be contacted at l.boden@radio227.nl. Radio 227 is steadily increasing its cable distribution and now reaches a total population of 4.2 million. A live stream is also available on its Web site.

Is there anyone out there who may have some mid 60's era AFRTS
transcribed programs in their library?

I'm building a commemorative site for my AFRS-Athens group and
desperately need AFRTS canned audio from 1964 thru 1967.
Unfortunately, all of my material was destroyed in 1987.

Thanks in advance.

Closed toilets and an unpaid bill. The present owners and operators of the radio ship "St.Paul" ("Pirate Radio 603") failed to pay a bill of 289 Euros which was due on 30 September for the ship' s anchorage costs in the harbour of Korrvik, Åland Islands, Finland. Meanwhile, the harbour administration
ordered to close the toilets onboard of the ship, so that the water in the harbour will not be polluted. More in a Swedish language article in the local newspaper Ålandstidningen:

The answer depends on a number of definitions.

Most references will tell you the answer is Pittsburgh, where KDKA is located.

KDKA argues that it was the first station to take out a license for the specific purpose of broadcasting. Other stations used experimental licenses to engage in broadcasting before KDKA's appearance - the stations now known as WWJ (Detroit), WHA (Madison, Wis.), and KCBS (San Francisco, originally KQW San Jose) are often cited.

There were radio stations for other purposes before any of these broadcast stations came along. Hams; stations on ships (and the shore stations that communicated with them); military stations; and scientific experimenters all predated broadcasting. It has been suggested Nathan B. Stubblefield of Murray, Kentucky was the first to experiment with radio in the U.S.. I would by no means rule out the possibility someone beat Stubblefield to it though. Since licenses weren't required until 1912 (and occasionally not bothered with even after that date) records are incomplete.

What has happened to the FCC interference protection standards, though?
I am regularly seeing appliances for sale which can't even come close to
meeting the Part 15 requirements for emission. Now we've got BPL coming
down the pike, on top of all the touch lamps and noisy TV sets. Is there
anyone at the FCC that cares about MW and HF use at all?

>One of the major BPL suppliers has publicly traded stock. They've gone

I think BPL is a terrible idea, and I say that as someone who holds stock
in several power companies. But then, I thought VOIP was a terrible idea
also.

Amateur Radio Newsline™ Report 1418 October 15, 2004

Amateur Radio Newsline report number 1418 with a release date of
Friday, October 15, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The FCC acts on B-P-L amd the IEEE readies a standard for Broadband
Over Powerline hardware. Find out the impact on ham radio on on
Amateur Radio Newsline report number 1418 coming your way right now.

(Billboard Cart Here)

**

THE BPL FIGHT: THE FCC RELEASES ITS BPL REPORT AND ORDER

The FCC has acted to make Broadband Over Powerline a part of the
telecommunications landscape. Amateur Radio Newsline's Paul
Courson, WA3VJB, in Washington and Mark Abramovich, NT3V, in Philadelphia take
an in depth look at the FCC decision and its impact on Amateur
Radio:

-

FCC Michael Powell: "Would all members in favor of the item
signify
by saying aye? All those opposed? The item is adopted, thank you
very much (sound of gavel banging down)"

--

(WA3VJB report) Although several took note of interference concerns,
none of the Commissioners voted against the proposal, and only one
Commissioner voted any dissent at all. His issue was thet utility
companies might improperly try to raise your light bill to help pay
for BPL. The measure passed, and BPL can now be built and marketed to
real customers nationwide.

The system thet's been in the prototype stage for a while now uses
the power lines as a way to transmit and receive telemetry with
computers such as those used in the home. In sending that data over
the wiring in a house or on the poles outside, small amounts of
signal radiate and can cause interference to users of the same
frequencies BPL uses on the power grid.

The ham radio community, led by the research of ARRL laboratory
manager Ed Hare W1RFI, documented the potential for electrical noise

during this prototype and testing phase. The League submitted what many consider alarming findings to the FCC as a protest and challenge to the BPL proposal on ham radio's behalf.

FCC Commissioner Michael Copp addressed that point before he voted to approve:

--

FCC Commissioner Michael Copp: "I remain concerned with the question of interference to amateur radio users. I take the concerns of this community very seriously, and I believe the FCC has an obligation to work hard to monitor, investigate and take quick action to resolve harmful interference. "

--

When Copp voted approval, his dissent focused only on whether there were safeguards to keep utilities from using electricity revenue to help pay for BPL.

The proposal from FCC technical staff calls for interference mitigation procedures, including an online public database to help identify by zip code where BPL might be a source of interference, The database also will name a contact person at the company running the system in that zip code, to negotiate and resolve complaints.

Commissioner Copp said he hopes the processs will be quick:

--

FCC Commissioner Michael Copp: "If an amateur radio user makes a complaint, and an agreement between the BPL provider and the amateur radio user cannot be reached, the FCC should step in and resolve the matter. These cases must not take years to resolve. I hope we'll have some really effective rapid-turnaround procedures here in place..."

--

FCC Chairman Michael Powell has been an early flag-waver for BPL, and spent time leading up to the vote praising its potential as a competitive force against existing high-speed data distribution systems. The noise made by those concerned about BPL noise must have reached the top desk, because Powell took time to acknowledge BPL's potential negative impact, although he never said the word interference in his remarks:

--

FCC Chairman Michael Powell: There are users of spectrum that are affected by this. We've taken that seriously from the very beginning. I want to particularly say to all those wonderful amateur radio operators out there. They're still an important resource to the

American communications landscape. They're ones that we continue to care about, continue to want to foster and prosper. And we have taken great care to ensure that the protections in this item are necessary to allow that service to continue. We will continue to be vigilant about it, and put the tools in place for that.

--

But then Powell returned to his celebration that BPL would soon provide another way to bring high-speed data to the masses, citing advantages for homeland security, the reliability of the nation's power grid, and the U.S place in the world.

--

FCC Chairman Michael Powell: "Let me underscore that the potential
for America, and the American economy is too great too enormous, too potentially groundbreaking to sit idly by and allow any claim, or any possible speculative fear keep us from continuing to drive this technology drive America into the broadband future."

--

For reaction to the FCC's approval of Broadband over Power Lines, we turn to Mark Abramowicz, NT3V:

--

(NT3V report) For the American Radio Relay League, the FCC's decision in the BPL proceeding wasn't a surprise.

The ARRL's leader says now, more than ever, amateur radio operators will have to be vigilant about any BPL interference that appears and be prepared to act with a complaint that could go all the way to the FCC.

ARRL president Jim Haynie W5JBP says there were some encouraging comments from commission members about the value of the Amateur Radio service. And, for the first time, an admission from the panel that BPL technology is far from perfect.

--

Jim Haynie, W5JBP: "You go back a year, a year and a half ago, there was all this talk about: What interference? There is no interference," Haynie recalled. "And fully half of the meeting was how to deal with the interference issue.

"So the commission now has finally realized that what we've been saying all along does exist and I'm sure the N-T-I-A had a lot to do with that, too."

--

Haynie says among the restrictions the FCC placed on the BPL providers is establishing a database of utility and system operators who will be accountable for neighborhood interference complaints.

He says it appears that provision may have come out of the ARRL's direct lobbying of commissioners.

--

Jim Haynie, W5JBP: "We've actually had personal meetings with a number of the commissioners," Haynie says. "And Commissioner (Michael) Copps is one of them. Kevin Martin was another. Ms. (Kathleen) Adelstein was another one.

"And these were all held in the past couple of months so it's fresh on their mind. They know where we're coming from. That's what the league has been doing on a direct basis rather than just file a written petition or comments, which we did."

--

Haynie also credited the direct lobbying efforts aimed at members of Congress - many of whom look favorably on the Amateur Radio service.

--

Jim Haynie, W2JBP: "They've made their feelings known to the commission and while they support inexpensive broadband for America, you know, on the other hand they understand the infrastructure that's involved with Amateur Radio and public safety," Haynie says.

--

Finally, while Haynie says he'll reserve additional comment until reading the full FCC document, he feels some sense of relief at what finally emerged.

--

Jim Haynie, W5JBP: "I know there's some detractors out there that for whatever reason think the league probably lost and sold them down the river. And that's not the case at all," Haynie says. "When we look at what happened at the commission meeting and actually read the details of the report and order, I think what the league has been doing for the last couple of three years will be quite evident.

"So I think we did a good job. Did we get what we want, no - not entirely. But we also knew going in that you can't just say: 'I don't want BPL at all.' It's going to be done in some form or fashion, now the only question is how much?"

--

Over at CQ Magazine, Editor Rich Moseson, W2VU, is feverishly studying what the FCC has done and what impact it will have on Amateur Radio.

He tells me the FCC's press release on the subject seems to contradict the commissioners' assurances that interference mitigation should be done in a timely fashion.

Moseson notes that in the same sentence such resolution of interference problems would be done without disruptions of service to BPL subscribers.

--

Rich Moseson, W2VU: "So, in other words, the users of this non-licensed service have priority over licensed users," Moseson says. "This is what we were afraid of to begin with."

--

Moseson says he's also concerned about the closing comments of FCC Chairman Michael Powell that were not included in the public statement released on the commission's website.

--

Rich Moseson, W2VU: "He starts out practically pandering to hams and then turns around and tells us not to stand in the way of progress," Moseson says.

--

While sounding pessimistic, Moseson says we'll have to wait and see what's in the actual FCC report and order.

With my colleague, Paul Courson in Washington, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

By the way, you'll find the audio comments made by some of the commissioners as a Web Extra feature. You can find them by pointing the browser on your computer to our website, www-dot-arnewsline-dot org. (ARNewsline (tm))

THE BPL FIGHT: IEEE READIES BPL STANDARD

The Institute of Electrical and Electronics and Engineers -- thats the IEEE -- it has begun to develop standard 1675 for Broadband Over

Powerline hardware.

According to immformation at the organizations website, the scope of this standard will be to provide Utilities and Manufacturers standards for the commonly used hardware for BPL installations. Also to provide standard installation, maintenance and operation methods to ensure the safety of both Utility and Non-utility personnel working on BPL equipment.

This project will not cover data transmission, protocols, or other aspects of BPL related to the internal workings of this technology. More information is on-line at http://grouper.ieee.org/groups/bop/ (IEEE)

**

THE BPL FIGHT: HAMS AND CB'ERS UNITE - DOWN UNDER

Still with Broadband Over Powerline issues, word that ACREM, the Australian Citizens Radio Emergency Monitors, have joined the fight against B-P-L. WIA Newsman Martin Howells, VK2UMJ, reports:

--

Following reports that the ACA may be considering the removal of interference protection for some HF radio users, ACREM New South Wales forwarded an official written protest to the ACA, the Minister for Communications, the Shadow Minister for Communications, and the leaders of both major political parties.

This was followed up with a further submission lodged by e-mail outlining the Japanese report that showed interference from BPL as high as 300 MHz. Although ACREM is primarily a CB emergency monitoring group, the interests of all radiocommunications users, including amateur operators, is also a concern especially given the potential safety-of-life issues of widespread interference to HF and VHF frequencies. ACREM New South Wales will continue to play an active role in the BPL fight, alongside the WIA and other groups.

This has been Martin Howells, VK2UMJ, for WIA National News.

--

Asn B-P-L looms in more and more places, users of many radio services are banding together to fight it. The joint efforts of hams and CB'ers in Australia is just one example of what's happening, worldwide. (WIA News)

**

ENFORCEMENT: $10,000 FINE AGAINST JACK GERRITSEN, Ex-KG6IRO, AFFIRMED

The FCC has affirmed its earlier tentative fine of $10,000 against unlicensed Los Angeles area radio operator Jack Gerritsen, the former KG6IRO. This for operating radio transmitting gear after the agency

set aside his license.

As previously reported, on June 15th of this year the Commission's Los Angeles Field Office issued a Notice of Apparent Liability for Forfeiture to Gerritsen in the amount of ten thousand dollars. This, for Gerritsen's apparent, willfull and repeated violating of Section
301 of the Communications Act by operating a radio station in the Amateur Radio Service without authorization from the Commission to do so.

Gerritsen sent in a response to the notice on July 13th. In his filing Gerritsen claimed that he has a valid amateur license that permits him to operate on all of the radio frequencies detailed in the Notice of Apparent Liability and that that the FCC's earlier action to set aside of his amateur license and KG6IRO call sign was unfounded. He also claimed the set aside did not prohibit him from transmitting on the amateur radio bands given his claim that his amateur license was valid. Also, that any possible suspension of his license is also pending a hearing before an Administrative Law Judge and that it makes the Notice of Apparent Liability moot until any suspension occurs.

Well that might be Gerritsens interpertation of the FCC's decision
but its not shared by the agency. In affirming its decision to require him to pay the ten thousand dollar fine the FCC says that Gerritsen has no license. Just a pending application. Therefore there is no license for the Commission to suspend that the correspondence sent to Gerritsen from the FCC informed him that his amateur license had been set aside. As such the FCC did not grant him an Amateur license nor any authorization to use the amateur frequencies.

In closing, it found that Gerritsen is fully liable for a monetary forfeiture of in the amount of ten thousand dollars. It gave him 30 days fropm the October 5th release of its decision to pay. If he fails to do this in thr alloted or the FCC says it may be referred to the Department of Justice for collection. The full story is on line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-3183A1.doc (FCC)

**

ENFORCEMENT: TO MANY CALL SIGN CHANGES

The FCC wants to know why a California couple has been requesting and then cancelling call signs. The agency's Daryl Duckworth, NN0W, explains:

--

Duckworth: "NN6AA, Edward Beluso, of Redding, California, has
been
asked to provide information on about a dozen licenses that have been
granted and canceled since June of 1999. These filings raise
questions as to whether these are being filed in order to block
future assignments of the call signs and the legitimacy of those that
were issued for clubs.
At the same address, WA6JAN, Janet Beluso, has also been asked to
supply information regarding five call signs."
This is Daryl Duckworth, NN0W, reporting."

--

The FCC gave the Beluso's the usual amount of time to respond.

RESCUE RADIO: KKOB TOWER HIT BY HOT AOR BALLOON

KKOB-AM radio in Albuquerque, New Mexico, had to shut down its 50,000-
watt transmitter for several hours on Sunday, October 10th. This,
after a hot air balloon got tangeled at the top of the stations 700
foot high broadcast tower. Amateur Radio Newsline's Norm Seeley,
KI7UP, has more:

--

According to news reports, Bill Chapel was flying the hot-air balloon
when it blew into the tower near a park where the Albuquerque
International Balloon Fiesta was being held. The lines supporting
the airships canopy got wrapped around the triangular shaped tower.
This left the gondola resting up against the antenna structure with
the straps securing it to the balloon tangled in the antenna
structure.

Chapel, and passengers Aaron Whitacre, 10, and Troy Wells, 14,
successfully got out of the gondola and onto the tower. They then
began the long climb down the antenna structures ladder.

At the 100 foot level they were met by a group of trained rescue
worker. The rescue team secured the trip with safety gear, and
helped them into a utility truck bucket for the last of the trip back

to mother Earth. Tower maintenance crews then got to work removing the remainder of the balloon from the antenna structure.

Nobody was hurt in the incident and the station resumed normal operation once the remnants of the balloon were removed.

For the Amateur Radio Newsline, Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

The Federal Aviation Administration and National Transportation Safety Board are reportedly investigating the incident. The Albuquerque International Balloon Fiesta has been flying since 1972. (Published news reports)

**

RESCUE RADIO: WAYS TO WARN

Scott Marks, KI4GGU, says via the WIA News that Israel has developed an emergency public notification system called Silent Radio. This is a regular FM station that remains silent until some kind of emergency situation takes place. Once it receives an alert, it takes to the air to issue any required information to the Israeli public which already knows where to tune in. Kind of the the old Emergency Broadcast System we had here in the U-S-A before the 1990's upgrade
to E-A-S that is supposed to warn a lot more people but is also requires special decoding equipment and is very complex. (WIA News)

**

RESCUE RADIO: WAY NOT TO WARN

Meantime, over in the U-K, Bob Sayers, G8IYK says the Emergency Planning community in the that nation has tried to have something like the Israeli alert system established for many years. Unfortunately, they always get the same response from government officials ewho say that it would be prohibitively expensive.

In fact not so long ago the nation-wide warning siren network, set up in World War 2 but retained and improved upon throughout the Cold War period, was scrapped. The reason was the same. No money to maintain it. (WIA News)

ON THE WEB: NO MORE FREE E-MAIL OFF-LINE CLIENT RIDE

If you are a user of Juno's no-charge e-mail service, part of your
free ride is coming to an end. This as the Internet service provider announces that as of December 1st free members will be required to use webmail to get and send e-mail. In other words you will need a

web accoumt someplace else to use Juno e-mail.

This change only affects Juno Free members who currently download e-mail to their computer using Juno software, Outlook Express or other "offline" e-mail clients. These changes to Juno e-mail will
not affect Juno SpeedBand, Platinum, or MegaMail members or Juno Free members who already read and write Juno e-mail exclusively on the Web.

According to a release from the company, to continue being able to use an off-line client with Juno e-mail current free members will need to upgrade to one of Juno's premium services. More information
is on line at www.juno.com/emaildiscount. E mail discount is spelled as one word. (Juno press release)

RADIO HEALTH REDUX: IS THERE A CANCER CONNECTION TO HIGH POWER RADIO TRANSMISSIONS

A follow up to last weeks story on the risks associated to R-F exposure from living near a high power broadcast station. Bob Gonsett, W6VR, points a report in his C-G-C Communicator that discused the same subject. Amateur Radio Newslie's Bruce Tennant,
K6PZW, reports:

--

Two years ago an Italian study found death rates from leukemia increased dramatically for residents living within two miles of Vatican Radio's powerful array of transmitters in Rome. Now, as reported last week, Wired Magazine says that Korean researchers have looked at the death rates in 10 regions with AM radio transmitting towers broadcasting at more than 100 kilowatts. They compared them with control areas without transmitters, and claim to have found substantially higher cancer mortality rates among those who lived within two kilometers of the high power transmitters.

But says the CGC Communicator, the problem with the Vatican study is that it was relatively small in the size and lacked exposure data. Also, the new Korean study has not even been published. As a result, this is all speculative and based on some rather sketchy pre release information.

Clouding the picture is the statement of Epidemiologist Mary McBride of the British Columbia Cancer Agency also reported in Wired magazine. It quotes Mc Bride as saying that there have been many studies like these, and they just are not very convincing.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The bottom line to all this. Its going to take more than just scientific speculation to know foe certain if there is any affect at all from living close a a high power broadcast transmitter. (CGC)

NAMES IN THE NEWS: AMSAT ELECTIONS RESULTS ANNOUNCED

Some new names and some old will be running AMSAT North America the next year. This, with word that Rick Hambly, W2GPS, has been elected President of the Amateur Radio space authority at the organizations October 7th Board of Directors meeting.

Hambly replaces Robin Haighton, VE3FRH, who has headed up AMSAT North Ameriuca the last seveal years. Also elected or re-elected are are Lee McLamb, KU4OS as Executive Vice President, Mike Kingery, KE4AZN as Vice President Operations, Stan Wood, WA4FNY taking the task of Vice President of Engineering, Barry Baines, WD4ASW as Vice President Marketing and User Services, and Frank Bauer, KA3HDO as Vice President Human Sapceflight. Gunther Meise, W8GSM, will be taking the Treasurers spot for the coming year as well.

Also at the meeting status reviews were presented of several undertakings. These including ongoing projects such as the Echo satellite and the launch of future hamsats including Eagle. The Board also had continuing discussions on regulatory matters, most importantly the impact of FCC Report and Order 04-130 which deals with the subject of Orbital Debris. (ANS)

**

RADIO IN SPACE: MESABA THE IRANIAN SATELLITE

SpaceDaily reports that Iran intends to launch its first satellite in April 2005. The bird named Mesbah is said to be a tewenty in square cube weighing in at 132 pounds.

Plans are to put it int a Low Earth Orbit at about about 560 miles. The satellite will be used to identify natural resources, control the nations electrical and energy network and can also be used by communications and crisis management teams the press reports said. (ANS)

**

WORLDBEAT: SA HAMS DID NOT LOOSE 2.4 OR 5.6 GHZ

South African Amateurs have not lost access to either the 2.4 and 5.6 GHz band. Its just a government typo. At least thats what South Africa Radio League president, Graham Hartlett, ZS6GJH, is saying ane he should know. Thats because he set out to investigate why both pieces of spectrum were not listed to that nations ham radio community.

Now Harlett says that he has in hand a communication from the nations radio regulatory body. It tells him that the 3.4 and 5.6 GHz allocations for amateurs had been accidentally omitted from the last publication of the band plan in the Government Gazette. Harlett was assured that this will be rectified in the next band plan

publication. (WIA News)

**

SPECIAL EVENTS: KØAIR/KØGRL TO CELEBRATE VETERANS DAY

To recognize Veterans Day and the birthday of the legandary General Curtis E. LeMay, the Strategic Air Command Memorial Amateur Radio Club will be operating K0AIR and K0GRL on Thursday, November 11th. The stations will be on the ait 1200 to 2400 hours UTC in the general phone bands on or near to the following frequencies ending in 47. Thhis 3.947, 7.247, 14.247, 21.347, and 28.347 Mhz depending on propagation and time of day. Six and two meters will also be activated 51.47 and 146.46 Mhz. For QSL information please visit www.sacmarc.org on the World-Wide-Web.

**

DX

In D-X, word that a group of seven German operators is active from the Chesterfield Islands for eight days beginning about the 16th of October depending on weather conditions in the area. The Chesterfield Islands are located between Australia and New Caledonia. Once on the air, activity will be on 160 to 6 metres using CW, SSB and RTTY. The callsign will not be announced before operations start. QSL as directed on the air. (OPDX)

And YT1CS is active portable 5Z4 from Kenya until 18th of November. He orks only SSB on 20 and 15 metres. Previously he was signing the rather convoluted call of 5Z4YT1CS until the Kenyan licensing authority re-inserted the 'stroke' mark in the callsign. (RSGB)

Lastly, seven operators from Germany and Poland are active as TJ3SP and TJ3FR through October 20th. They have four stations on all bands and modes, except 160 and 6 meters. These two bands are not licensed for use in Cameroon. (OPDX)

**

THAT FINAL ITEM: THE HISTORY OF JOTA

And finally this week, its the time of year for Jota -- the scouts annual ham radio Jamboree on the Air. Last week we told you about the event as it is today. Now we take a look back in time to the beginning of the Jamboree with John Williams, VK2BUI.

--

Jamboree On The Air is the largest annual international event in the Guides and Scouts event calendar, when thousands of Girl Guides and Scouts from all over the world gather for a weekend to contact each other by radio, share ideas, participate in many activities, make friends and learn new skills.

Like a lot of successful ventures, JOTA had a small beginning, and whilst Scouting utilised radio in its program in some areas for a number of years, it was not accepted as an official part of the Scout program until the 1957 Jubilee Jamboree at Sutton Park Coldfield, near Birmingham in the United Kingdom.

It was here that a very successful amateur radio station was set up, but amongst the sixty plus operators present, only two were in uniform, one of whom Mr Les Mitchell G3BHK.

As this was the only activity at the Jamboree not conducted with a full Scouting Staff he was rather disappointed, feeling that in the true spirit of such a wonderful international Scout activity all Scouters should have been involved in the manning and operation of this station.

His concern led him to call a meeting of overseas Scout radio Amateurs present at the Jamboree and during one of their meetings they decided to keep in touch with each other on air and ensure their availability, if possible, as station operators at future World Jamborees.

Initially one day a year was proposed, but thinking this over later Their nominated Organiser Les Mitchell suggested they consider inviting amateur radio operators throughout the world to join them instead in a special weekend each year for a Jamboree on the Air at which, hopefully, Scouts and leaders would be able to talk to each other throughout the world

Does BPL mean that I can just pack up my equipment? Or is it going to
be such a loser than I can ignore it?
I live a half mile east of a large power substation with high voltage
lines running north. Depending on the weather, I already have
occasional interference on all types of wireless reception and
transmission.

Would satellite or digital radio be better to avoid the interference?

Thanks for all your helpful information on this thread!

# 2638. Voice of Switzerland prepares to bow out

Newsgroup: rec.radio.broadcasting
Date: 2004-10-20 02:45:26 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cl4jg6$hid$1@xuxa.iecc.com>
Source record: 3775
Cross-posted to: rec.radio.broadcasting,rec.radio.shortwave

swissinfo October 18, 2004

"For almost 70 years, shortwave has played a fundamental role in making the reality and the aspirations of Switzerland known to the world," said Nicolas Lombard, the director of SRI.

The Swiss Shortwave Service - as SRI was first known - started broadcasting in 1935.

One of the first shortwave radio stations of its kind, it was aimed at the Swiss living abroad who wanted to keep abreast of news and current affairs back home. Broadcasts in English began six years later in 1941.

"SRI really represented an umbilical cord for our countrymen and women abroad, and for many years they didn't have any other means of getting information about Switzerland," said Giovanni Conti, executive director of Swisscom Broadcast, which provided the technical support for shortwave broadcasting.

The rise of fascism in neighbouring countries was another factor that spurred the creation of SRI, whose mandate also included transmitting the country's national identity and federal principles abroad.

During the Second World War, the station developed its long-standing identity as a neutral voice during periods of international conflict.

But SRI really came to the fore during the Cold War, when shortwave listeners around the world tuned in for unbiased coverage of global events.

By this time, the station was broadcasting in eight languages and was receiving up to 130,000 letters from listeners a year - from all over the world.

"During this period of propaganda, Switzerland's neutrality certainly helped the success of SRI," said Lombard, who joined the service in 1965.

It is estimated that SRI had an international audience of between five and ten million people during this time.

In 1972, SRI - prompted by a move towards more powerful transmitting capabilities - inaugurated the Sottens transmitter near Lausanne.

At 500 kilowatts, it was ten times more powerful than its predecessor at Schwarzenburg outside the capital, Bern, which dated from 1938.

But the 1980s saw the beginning of the decline of shortwave. The fall of the Berlin Wall left SRI executives wondering how they could adapt the station's

neutral mandate to a new era of global entente.

Added to this was the advent of new technologies such as FM and satellites, which gradually started to replace shortwave.

During the 1990s, SRI also began the process of transforming itself from shortwave broadcaster to multimedia internet outlet.

But it was the government's decision to cut funding to SRI that proved the final blow for shortwave radio.

However, Conti sees the passing of radio as a transition rather than the end of an era.

"If one shuts off an old technology like shortwave, another one comes in its place like digital," he said.

"We must maintain a qualitative level of old technologies as long as possible, without, however, missing the boat on the new ones," added Corti.

Lombard agrees that new technology is the way forward.

"The internet cannot replace what was on offer on shortwave," he said. "But it offers new and great possibilities for multimedia communication, which until now one couldn't possibly imagine."

swissinfo, Armando Mombelli

Key Facts

-1935: Swiss Shortwave Service created.
-1939: First shortwave transmitter for the service at Schwarzenburg.
-1972: Sottens transmitter opened.
-1978: Service renamed Swiss Radio International.
-2004: Sottens transmitter closes, ending shortwave era.

With radio programmes in eight languages, SRI reached an estimated five to ten million listeners worldwide during the Cold War.

By the end of the 1990s, shortwave was in decline and SRI decided to abandon shortwave radio broadcasting.

swissinfo/SRI now concentrates exclusively on its multimedia website, www.swissinfo.org.

Being a Houston Astros fan I was surprised on a trip to New England last week that only two radio stations carried the NLCS games. I got one (can't remember calls or frequency) during late afternoon around Portland Maine. After 5:30pm or so, I listened on WHAM Rochester NY. That signal did good from near the Maine-new Hampshire border down to Boston.

RadioLovers.com Collects Shows Where Copyrights Have Expired

October 19, 2004

Before the days of video games, MTV and the Internet, families used to gather around the radio to listen to old radio shows.

But when the era of television arrived, many of those old radio shows went off the air.

Now you can hear all those great old radio programs again on RadioLovers.com. The site collects hundreds of old-time radio broadcasts that date so far back that many of their copyrights have expired.

Because of that, you can listen to the old programs as often as you like without paying anyone a cent.

The list of shows available is long. There are the old comedies such as the "Abbott and Costello" show and their infamous "Who's on First?" routine. "Amos and Andy" broadcasts featured here date back to 1928.

There are also dramas such as "The Avenger" and westerns such as "Hopalong Cassidy," "Gene Autry" and "Death Valley Days."

Even "Batman" was around way back then.

These vintage radio programs are great for any nostalgic grandmother or grandfather who may want to take a step back in time, but also something that may be fun to introduce to the young ones to show the visually stimulated generation what the theater of the mind was all about.

The site is growing and shows are continually being added, but only American broadcasts are available. Fans of the British "Hitchhikers Guide to the Galaxy" radio series, for example, will have to go elsewhere.

Tue 19 October, 2004 11:34
By Adam Pasick, UK media correspondent

LONDON (Reuters) - The BBC has helped drive the take-up of digital radio but should consider making programmes from its vast radio archives available to private sector companies, a government commission says.

Tuesday's report on the publicly funded broadcaster's five digital channels -- 1Xtra, BBC Asian Network, 6 Music, BBC7 and Five Live Sports Extra -- comes less than a week after a separate government-commissioned report criticised the BBC's digital television channels for providing poor value for money.

The digital radio report from former Channel Four executive Tim Gardam comes as parliament reviews the BBC's governing charter. At a time when the BBC's independence from government oversight is in doubt, Gardam also warned that "the lack of any formal relationship between the BBC governors and (media regulator) Ofcom ... is a problem."

Gardam recommended that commercial radio companies be able to buy programmes from the BBC Radio archive, and that the BBC should consider a joint venture with the commercial sector for archival programming in the future.

The country is moving toward all-digital formats for television and radio, which enable a wider selection of stations and free up valuable broadcast spectrum for other uses. More than half of households have made the switch to digital TV, but the public has been slower to buy digital radios, which are only beginning to be sold at attractive prices.

The BBC's digital radio stations have been "instrumental in driving digital take-up" thus far, Gardam said in his report. "As the market develops it will be necessary for the BBC's services to be more carefully described if their distinctiveness is to be ensured."

-- Black music station 1Xtra "has established a credibility and reputation with a young Black audience where the BBC had little before." But he cautioned that because it concentrates on the "urban" music genre, it is not completely fulfilling its remit to bring together the diversity of Black music and culture across the UK, and "does not do much to serve older Afro-Caribbean or African audiences."

-- BBC Asian Network has produced "considerable added value" with programmes like its "innovative" soap drama "Silver Street."

-- Alternative music channel 6 Music represents the BBC's "creative enthusiasm at its most impressive."

-- Sports broadcaster Five Live produces "extra value for money" by broadcasting more hours of coverage from events for which the BBC owns rights.

-- BBC 7 has "reinvented children's radio as a multi-media proposition" but has had a "significant market impact," playing a role in the failure of its commercial counterpart, Oneworld.

On Monday October 18, VRT Radio told staff at RVi, its international service that all shortwave transmissions of programmes in English, French and German would be discontinued. The only shortwave activity that will survive is the transmission of 4 hours per day of programmes in Dutch, most of it relays of domestic VRT stations, and only beamed to south Europe.

According to the management, last transmissions of programmes in English, French and German would be on last day of winter schedule: March 26 2005

Most references, and the industry itself, has designated KDKA as the first radio broadcaster. This is in part due to your note that KDKA's management was the first to have deliberately intended to broadcast to the surrounding population (in fact, KDKA's first general manager, whose name I've forgotten, is considered to have coined the word "broadcast"). I'll admit that I'm biased - I used to work for the old girl. But while the industry designates KDKA as the first, they also do recognise the other pioneers who showed Westinghouse Electric that broadcasting was a viable industry, since they were, accidently or otherwise, also broadcasting to their own regions.

> are incomplete.

Stubblefield, I hold, wasn't using "radio" per se. He was using the electromagetic spectrum, unmodulated, more as an induced audio-range EM field...I'll give him that. Because of the nature of his method, it would never have been practical, even if one were to have unlimited amounts of power, since only one such transmitter would be possible in any given area (with more than one, the overlapping audio-rate EM fields would be worse than the co-channel interference AM radio has today).

# 2649. South Africa - bid to write off Capital Radio costs

Newsgroup: rec.radio.broadcasting
Date: 2004-10-20 02:45:37 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cl4jgh$hks$1@xuxa.iecc.com>
Source record: 3792

October 19, 2004

By Angela Quintal

The Department of Communications appears to have given up on selling Capital Radio to recoup the costs involved in its closure in 1996.

In its annual report, it says it wants the cabinet to write off an estimated R3.67 million.

Capital Radio, based in the Transkei homeland from 1979 and broadcast on the 604 medium wave band that became its catchphrase, was an institution during the latter years of apartheid, with the government repeatedly trying to shut it down.

Until the advent of Radio 702, it was the only commercial radio station in South Africa.

Three attempts to sell it in the past five years have failed.

You're right. Interference requirements seem to have to become a dead issue in the last 10 or 15 years. It would be asking alot of the FCC to have them start caring now.

>Now we've got BPL coming
> down the pike, on top of all the touch lamps and noisy TV sets. Is there

>(in fact, KDKA's first general manager, whose name I've forgotten, is considered to have coined the word "broadcast")<

That would be a neat trick, seeing as how one cannot coin a word that already exists. The term "broadcast" came from agriculture.

## 2658. Sinclair Broadcasting's misuse of the public trust

Newsgroup: rec.radio.broadcasting
Date: 2004-10-21 02:34:48 UTC
From: Bob Haberkost <cbclistener-really!-@canada.com>
Message-ID: <cl7788$d7c$1@xuxa.iecc.com>
Source record: 3800

I won't go into rehashing the controversy revolving around this issue....if you don't know about it, you've been under a rock. But...

Heard on CBC (CBC's The Current, which was simulcast on the 275 or so Pacifica stations as part of a joint effort with Democracy Now.org) on 15 October (http://www.cbc.ca/thecurrent/2004/200410/20041015.html).

Cliff Kincaid (Accuracy in the Media) claims that a Kerry campaign spokesman warned that "they'd better hope that we don't win." It's interesting to note that most every reference to this quote comes from right-wing nutjob websites, who obviously feel that free speech includes the right to use irresponsible, biased and sometimes slanderous speech, and that Sinclair, in the execution of its First Amendment right, can violate federal election law by promoting a candidate on their stations.

Well, we'll see. This may just be the straw that broke the camel's back, and if Kerry wins, these folks may find a new, and more all-encompassing, Fairness Doctrine returned to broadcasting. You right-wingers may have just gotten exactly the thing you can't stand, as a result of your encouragement of irresponsible use of the public trust to validate only those concepts you already believe. Shame, really. Blame Hyman. Now you may end up having to hear the other side of the story more often. Not that that's a restriction in your freedom of speech, and therefore NOT censorship. Censorship is a limit on what can be said. A re-imposed Fairness Doctrine would only mandate what must be said as well. Think about what you might learn about, now!

(And we've already handled that broadcasting does not have full First Amendment protections. So don't bother.)

>
>

The fairness doctrine is interference. It was used as a political club. Richard Nixon and the Republican party were using the so-called fairness doctrine to go after the licenses of radio and TV properties of networks and newspapers they didn't like. But Nixon didn't invent the tactic. It was first used in the Kennedy administration. Given today's political climate,I'm sure both parties would enthusiastically hammer the media companies whenever embarrassing stories got out.

Is that really what you want?

There's a mistaken belief that dropping the fairness doctrine made right wing political talk radio possible. That's not true. In Chicago, Howard Miller had a greatly entertaining political talk show back in the early seventies. Miller was to the right of Limbaugh, Hannity and Atilla the Hun.

Let's also consider who else gets treated shabbily by the fairness doctrine. Who should determine what the audience should hear -- the government or the audience?

Search around and find out if your local power company has any tests or has expressed any interest in BPL.

# 2661. Spanish pirates outnumber legal stations by 2-1

Newsgroup: rec.radio.broadcasting
Date: 2004-10-21 02:34:51 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cl778b$d7j$1@xuxa.iecc.com>
Source record: 3794
Cross-posted to: alt.pirate.radio,alt.radio.pirate,rec.radio.broadcasting

In Spain there are at least 2,279 illegal broadcasting stations in operation, double the number of authorized private stations, and some even pretend to be part of an authentic network, according to a report given to the Ministry of Industry by the Spanish Association of Commercial Radio (AERC).

The secretary of the AERC, Alfonso Ruiz de Ass&#65533;n, says that ten years ago there were approximately 300 pirates, but an explosion of individual stations and the formation of radio networks has contributed to this rapid expansion. In addition, the AERC reports that there are 124 municipal transmitters with administrative concessions that involve some type of irregularity, and 504 stations that fail to fulfill the law, either because they are not exploited by the city councils, or because they broadcast in networks, or are connected to private commercial networks.

The existence of these broadcasting organizations, says Ruiz de Ass&#65533;n, produces interference, spoils the quality of reception and does economic damage to the licensed stations. The report will be sent to the presidents of the autonomous communities and to the competent authorities in the matter, with the details of illegal transmitters and irregularities detected in each region.

The Association has registered 482 illegal transmitters in the Canary Islands; 387 in Andalusia; 318 in Valencia; 183 in Catalonia; 144 in Madrid; 143 in the Basque Country; 106 in Murcia; 103 in Galicia; 73 in Arag&#65533;n; 69 in Cantabria; 68 in Castile and Leon; 67 in Castilla-La Mancha; 40 in the Balearics; 40 in Asturias; 27 in Extremadira; 25 in Navarre and 4 in Rioja. Only Ceuta and Melilla are clear of illegalities, points out the report, which says the present situation is one of anarchy. It demands of the authorities urgent action to restore the application of the law in an activity "as meticulously regulated as is the radio".

According to the secretary of the Spanish Association of Commercial Radio, the ideal way to end the illegal stations would be joint action by the independent, competent communities and the central Administration.

That's sad to hear.... I enjoy listening to their transmission via Bonaire
around 0400 UTC (midnight local) before going to sleep. Strong, clear signal
with quality programming.

Perhaps it's available via the web, but I won't listen that way since I
don't have a computer in my bedroom.

Oh well, so long RVI.... and thanks for the QSL last week :)

> That would be a neat trick, seeing as how one cannot coin a word that already
> exists. The term "broadcast" came from agriculture.

Okay...so let's see how this relates....

There's a place in Greece called Marathon. It's been there for a long time, but before the battle of Marathon, and before Phidippides ran to Athens from there, Marathon was always a place, not a race. That's coinage.

Spam was (and still is) a once-ubiquitous canned meat, that some people found appeared in many undesirable places and after a time, despised. It's a word that's been around for some 75 years. Now it's the email glut that, after a time, most of us despise. That's coinage.

Gay used to mean happy. Glad. Merry. Cheery. Sunny. Bright. Still does, for that matter. Now it also means someone who is sexually attracted to someone of the same sex. That's coinage.

So (or sew). Broadcast, when used in the context of an agricultural effort, means to spread seed over a wide area. Seeing as radio has nothing to do with farming, when Frank Conrad (I've since found a reference for this...and of course, Conrad was one of the main protagonists in KDKA's beginnings, but never its general manager) appropriated a word which is suggestive of how radio waves propagate, and how he intended to use that property, he coined the term in the context most understood today. If you consult http://dictionary.reference.com/search?q=broadcast, you'll see that agricultural sense, the transitive form, as in spreading seed, is considered the word's fourth sense. But Conrad's word also took on an intransitive verb form, requiring no object at all, and a noun form. Neither of these has an analogous sense in agriculture. That's coinage.

Presumably BPL is only going to be a last-mile sort of thing. So you will not have to worry about the high voltage lines so much as the local lines in your neighborhood.

The noise will be broadband, and will be pretty much everywhere.

>Would satellite or digital radio be better to avoid the interference?

My personal feeling is that BPL will not be cost-effective anywhere and that attempts to put it into place will not be very successful, so there probably won't be too much to worry about. If you are outside of a dense urban area, it probably won't be an issue in any case.

Nobody really knows. But in this age where a huge number of appliances don't even come close to meeting Part 15 requirements, I think it's a wonder that HF is as clean as it is.

Analysis by Andy Sennitt, 21 October 2004

The US Federal Communications Commission (FCC) has given the thumbs up to the development of Broadband over Power Lines (BPL) technology, which at first glance looks like bad news for existing users of shortwave such as international broadcasters and radio amateurs. But based on what US computer industry analysts are saying, it looks as if BPL might not be as big a deal as first thought.

Slowly and slowly international broadcasting to major nations are dying out. I think the focus will be on third world countries these days. As now people in 1st world nations are expected to be listening to XM, Sirrus, or using internet feeds.

But even if an internet feed is available.. I still use shortwave :-)

I have to ask, but if the show has Viet vets that were in the Hanoi Hilton
talking about what happened after Kerry's testimony, and then Kerry
testifying... how can that be irresponsible? Biased? Yep.

However, if ABC and the rest of the "established" media decided to dig up
someone to do the same thing about Bush's Air National Guard training, would
you feel that is out of line? I suspect not.

After the nice ABC memo indicating that the on-air crew should harp on Bush
errors, and promote Kerry, I can't see how you can consider them unbiased.

Coining new meanings from older words happens all the time. Consider "Mace",
originally meaning a club (weapon), used as a trademark for a chemical that
repels attackers, and in danger of becoming a generic word.

Maybe so, but your statement...

> 2) There was no Fairness Doctrine until 1969.

...is quite incorrect. Quoting
http://www.museum.tv/archives/etv/F/htmlF/fairnessdoct/fairnessdoct.htm: The FCC fairness policy was given great credence by the 1969 U.S. Supreme Court case of /Red Lion Broadcasting Co., Inc/. v. FCC. In that case, a station in Pennsylvania, licensed by Red Lion Co., had aired a "Christian Crusade" program wherein an author, Fred J. Cook, was attacked. When Cook requested time to reply in keeping with the fairness doctrine, the station refused. Upon appeal to the FCC, the Commission declared that there was personal attack and the station had failed to meet its obligation. The station appealed and the case wended its way through the courts and eventually to the Supreme Court. The court ruled for the FCC, giving sanction to the fairness doctrine.

Point being that the Fairness Doctrine had been in place for quite some time...at least long enough that the challenge to it (which, as the article notes, failed) culminated in 1969. Another article (http://www.twf.org/News/Y1997/Fairness.html) asserts that the policy was in place in 1947 (and enforced since 1949) when the "Mayflower Doctrine", which prohibited all editorialising by broadcasters, was abandoned.

Regarding your item number one, who gets to be the arbiter of this
"Fairness?" Government?

Regarding items two through four, I would argue that the problem is,
and always will be, program content. You'd never know this if you
read the industry rags; they are obsessed with digital transmission
methods, but if the monopoly ownership rules aren't attended to, radio
will dwindle and, eventually, die.

So, why doesn't the government also require newspapers to have a balance of voices and opinions?

What are the details of this rewrite? The old fairness doctrine was a club for partisians and others with an ax to grind. How would the new fairness doctrine keep the political partisans and kooks from harassing media stations with nusiance complaints? Who would define what a nuisance complaint is?

Should this new fairness doctrine cover internet radio, satellite radio, satellite TV, and cable TV?

> 2. The audience has absolutely no input over what is heard on the airwaves

Yeah, people listen to what they want to listen to. I have no idea if the IQ factor is up or down. I am sure people would be stupid to be listening to things they don't want to listen to.

I am also sure there has never been as much bad radio as there is now. There has never been as much radio as there is now. There are more stations broadcasting more hours than ever before. Too bad. As a radio hobbyist, I miss the days of easy coast to coast dx'ing.

I dislike most of the stuff on the radio. So what? There's still plenty to listen to. Nobody makes me listen to Limbaigh, and I don't. I can't stand Sport Babble but I don't have to. Mostly I listen to a local FM Jazz station and US domestic shortwave radio. For me, radio has never been more entertaining. There are also some local Spanish and Polish language AM stations here with good music. Very little of this was around 30 years ago.

> 3. No, what I would really like to see is an ownership cap of seven to a

When was there more radio diversity? When there were three of four radio networks, each playing their own similiar so-so comedies or dramas? When each of the top 40 stations in the US were playing "Muskrat Love"? The radio industry is like the rest of the entertainment industry. As soon as somebody comes up with an idea which grabs a part of the audience, that idea gets reused over and over in each market.

If that's true, then the problem will fix itself. These overpriced radio stations will soon go for giveaway prices. You'll buy a radio station and so will I. I will realize that your programming ideas are so good, I'll copy them all!!

stripped
: > down, dumbed down voice-tracked generic dog-vomit programming!
: > 4. Radio listenership is down by 15-20%. There's a reason for that
:
: Yeah, it's called 'a lot of other things going on'.

Judging by the obesity epidemic going on in this country, none of the
"other things" involve very much physical activity (except flipping the
remote and playing with a joystick) Or is listening to the radio such an
intense experience that it requires 100% of your attention?

MT,

Make up Two Sets of 100 Post Cards each.

These Post Cards will 'detail' BPL Interference Problems with
your Local AM/FM/TV Stations. Go around ringing Door Bells
and have your Neighbors and Friends Sign them.

Add a Postage Stamp and Mail them.

Send one set to your Congressman for them to "Inquire About"
to the Regional FCC Office.

Send the other Set to the Local AM/FM/TV Stations.

The 'business' of BPL will will Die Quickly, when it "Costs"
Big Business like AM/FM/TV Stations MONEY !

Amateur Radio Newsline™ Report 1419 October 22, 2004

Amateur Radio Newsline report number 1419 with a release date of
Friday, October 22, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. A ham down-under finds a way to evaluate
the effect of B-P-L on your station while hams in California keep a
hospital in contact with the outside world. Find out the details on
Amateur Radio Newsline report number 1419 coming your way right now.

THE BPL FIGHT: AUSTRALIAN HAM DEVELOPS ON-LINE BPL IMPACT EVALUATION
TOOL

A new tool to help hams evaluate the impact of Broadband over
Powerline has just been made available on the Internet by an
Australian radio amateur. Its based on the work of a European
consortium that's trying to set a world standard for B-P-L
radiation
limits. Owen Duffy, VK1OD, is the ham who made it happen:

--

Current BPL technology works by conduction of signals in the radio
frequency spectrum up to about 100 MHz. Existing power lines
networks are not ideal RF transmission networks, they will radiate
radio frequency energy causing interference to radio communications
services, and they will be susceptible to interference from nearby
transmitters -- radio or otherwise.

The European Committee for Electrotechnical Standardization,
CENELEC, are developing a standard for "Electromagnetic emissions
from access powerline communications networks". Access powerline
communications networks are commonly termed Broadband over Power
Lines or B-P-L.

The proposed CENELEC standard does not automatically apply globally,
though countries like Australia draw heavily on international
standards, such as CENELEC's for their own jurisdiction.

This proposed standard would set limits for the conducted energy and
radiated energy of B-P-L systems. The radiation limit is specified
for example as a field strength in dBuA/m in a measurement bandwidth
at a specified distance on particular frequency, and its impact will
not be immediately apparent to most radio users.

Do you know what the impact of +4dBuA/m in 9KHz at 3m is on your receiver?

The B-P-L Interference Evaluation Tool allows evaluation of the impact of B-P-L interference under the proposed CENELEC standard given a set of location / application specific parameters.

Go to the BPL Interference Evaluation Tool at www.vk1od.net/bpl and enter the details for your site and discover the impact. The URL again is www.vk1od.net/bpl .

--

Again, the VK1OD B-P-L Interference Evaluation Tool is on the web at www.vk1od.net/bpl. (WIA News)

**

THE BPL FIGHT: FCC RULE CHANGES TO PROMOTE BROADBAND

Back here in the United States, very little attention appears to have been paid to two other FCC actions amid last weeks FCC decision on BPL. But both are designed to help promote different forms of broadband Internet access. This is important because they will be giving Broadband Over Powerline a run for the corporate dollar profit. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

In another vote taken at their October 14th meeting, the FCC loosened restrictions on fiber-optic networks built by local phone companies, encouraging them to make greater investments in so-called "fiber-to-the-curb" and "fiber-to-the-home" networks. According to the Commission, and as reported in a bulletin from C-Q, the ruling will encourage deployment of fiber optic broadband networks capable of delivering advanced data, video and voice service" by local telephone companies.

Prompted by the decision, several big telephone companies said they would move more rapidly to build fiber networks to homes. S-B-C says it now plans to provide 18 million households higher speed Internet services in two to three years, rather than five years as previously announced. . So far, Verizon Communications has been the most active in building residential fiber networks.

And there is more. The day after the BPL vote was taken, the FCC's Wireless Telecommunications Bureau announced a joint effort with the U.S. Department of Agriculture's Rural Utilities Service. This, to advance the deployment of broadband wireless telecommunications across rural America.

Its called the "Rural Wireless Community VISION Program. Its purpose is to bring experts from both agencies into rural communities selected as models to help provide technical, financial and other assistance in launching wireless broadband services in those areas.

All of this adds up to a lot of competition for B-P-L from the day it gets going.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

As we go to air, it is unclear whether either of these actions are efforts to promote multiple types of broadband, or, possibly a no confidence vote in the long-term potential of B-P-L.

More information on the program is available online at http://wireless.fcc.gov/outreach/ruralvision/index.html. (CQ)

**

RESTRUTURING: NEW UK INTERNET LINKING RULES

Across the Atlantic, some new procedures have been announced by United Kingdom radio regulator Ofcom. This, for the issuing Internet-linking Notices of Variation for U-K hams. Jeramy Boot, G4NJH, is in Nottingham with more.

--

Following a period of consultation, the following new procedures have been agreed between Ofcom and the RSGB. All current Internet linking NoVs will expire on 31st December 2004. Existing NoV-holders and new applicants will be able to apply for new NoVs from 1st October. The three-month period between 1st October and 31st December will allow for the continuity of the present
network to be maintained.

If you currently hold an Internet linking NoV and you wish to continue providing an Internet gateway beyond 31st December now is the time to apply for your new NoV. If you do not apply for a new NoV, the service you currently provide to the amateur radio community must cease on 31st December.

The method of application is totally web-based, and further details and a series of 'FAQs' can also be found on the RSGB website.

Jeramy Boot, G4NJH

--

Here in the U-S-A we take Voice over I P interconnects for granted. In most other nations hams are required to get special permission to connect their stations to the Internet. (GB2RS)

**

Break 1

Its time for you to identify four station. Linda Reader, N7HVF, if you please:

"From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the W7FP repeater serving Salt Lake City, Utah."

(5 sec pause here)

**

RESCUE RADIO: HAMS SUB FOR PHONES IN SOCAL HOSPITAL OUTAGE

Its ham radio to the rescue once again. This, when a construction accident takes out telephones, faxes, Internet and all other outside wireline communications at a southern California hospital. Amateur Radio Newsline's Joe Moell K0OV has the details.

--

Imagine that you're a nurse in the Intensive Care Unit of a hospital. You need to contact a doctor at his home or office, but you can't get an outside line on the phone at your nurses' station. That's what happened on October 6 at Tustin Hospital Medical Center in southern California. At a construction site next to the hospital, earthmoving equipment dug up 50 feet of telephone trunk lines, severing a 400-pair cable and damaging a 200-pair cable.

Following its previously-drilled procedures, the hospital's Director of Safety contacted the Hospital Disaster Support Communications System -- HDSCS -- an ARES group dedicated to the support of medical facilities in Orange County. In 30 minutes, the first ham had gotten through rush-hour traffic and arrived at the hospital to set up a communications link to the outside.

As more hams arrived, they deployed to the emergency Command Post, switchboard, Medical/Surgical unit, Pediatric unit, Intensive Care Unit, and the new Emergency Department. Meanwhile, the group's leader, April Moell WA6OPS, and two other base station operators prepared to make and receive phone calls in behalf of the THMC. Message traffic began to flow immediately after the operators got on station, as hospital staff members re-established links with their patients' physicians on the outside.

--

WA6OPS: "Go ahead, W6KOS."

"Please advise ICU, I got the service, it was a message machine. I put a message on that machine to call the number that you gave. I also gave it my number. If there's any other way they want us to try to get hold of him, we'll do it. Please advise them that we have called."

W6KOS: "Will do, W6KOS."

--

When phone company workers stated that repairs would take at least six hours, HDSCS began calling more members to provide relief to the first responders. By 9:30 AM the next morning, when the last telephone pair was spliced and the outage was declared to be over, four shifts of HDSCS operators had worked within the facility. Twenty-four hams participated in all.

This was the 85th time that HDSCS has activated to provide support when telephones failed or overloaded at hospitals, for reasons ranging from equipment failure, to cut cables, to natural disasters such as earthquakes, floods, and wildfires. It was the fifth activation so far in 2004. Each of the 80 members has his or her own Go-Kit, ready to take to any of the 34 supported hospitals to establish communications.

For more information on HDSCS -- and how hams in your community can organize to provide rapid response like this to hospitals -- point your Web browser to www.hdscs.org. Those are the initials for Hospital Disaster Support Communications System, followed by dot-org. From southern California, this is Joe Moell K-zero-Oscar-Victor, for Amateur Radio Newsline.

--

Among the hams responding to this emergency were Newsline's 2003 Young Ham of the Year Jay Thompson W6JAY and his father Richard, WA6NOL. They, and all of the others who volunteered are another good example of Amateur Radio ready and able to step in when commercial lines of communications fail. (K0OV, ARNewsline™)

**

RESCUE RADIO: STUDY SAYS THAT CELL PHONES IN HOSPITALS MAY PRESENT RELATIVELY FEW RFI HAZARDS

Cellular telephones may not pose the big risk in hospitals that was once thought. At least according to Dr. John Halamka who is the chief medical information officer for the Harvard Medical School.

According to Dr. Halamka, three years ago the school held a conference on the subject of hospital versus cellular telephone RFI issue. Attending were some 100 engineers, the Food and Drug Administration, wireless providers and businesses.

At that meeting the group determined that cell phones only pose a threat if they are within three feet of medical equipment. So, says Dr. Halamka, the current widespread hospital restrictions on cell phone use are probably greatly overblown except at locations where phones may audibly disturb patients or staff.

So will this report ease restrictions against cellular phone use in hospitals? Probably not because no study can cover all eventualities and most hospital administrators feel it better to safe than sorry.

The full story is on-line at
http://www.usatoday.com/tech/wireless/phones/2004-09-27-hospital-phone-use_x.htm (CGC)

**

COORDINATION: SERA RESCINDS MANDATORY TONE POLICY

According to the Repeater Users Internet remailer, the South Eastern Repeater Association has rescinded a controversial mandatory tone access policy enacted last summer. One that would have required tone receive and transmit on all new FM voice repeaters now, and on existing repeaters by July of 2006. Postings to the remailer say that numerous complaints lead the SERA Board of Directors to repeal the policy at a meeting on October 4th. (Repeater Owners / Users Remaler)

**

ENFORCEMENT: FLAT SCREEN TV FOOLS RESCUE SATELLITE

An Oregon resident has been told he could face a $10,000 fine if he continues to use a new flat screen television set that is radiating a high power spur on the International Distress Channel of 121.5 MHz. This, after an October 2nd visit by a contingent of local police, civil air patrol and search and rescue personnel.

Chris van Rossmann of Corvallis owns the year old Toshiba flat screen T-V. Unknown to him, the set was radiating a signal that was strong enough to be heard by the orbiting Sarsat Cospas search and rescue
satellite. From there it was relayed the Air Force Rescue Center at Langley Air Base in Virginia which activated a search.

Van Rossmann found out about his broken television set when the search team knocked on his door. They were expecting to find a malfunctioning portable emergency transponder like those carried on boats and in light plans. Instead their T-hunting gear lead them to the college students T-V.

This is not the first time that an errant piece of ground based electronic gear has fooled the Sarsat Cospas rescue satellite. About 12 years ago the crystal oscillator in an inadequately shielded broadcast graphics machine brought a similar response to a production studio in New Jersey. In that case the Ampex Digital Optics unit was quickly retired from service.

Van Rossmann is faring a lot better. Toshiba has contacted him and offered to provide him with a replacement set, for free of charge. (Published reports)

**

ENFORCEMENT: SANTA CRUZ PIRATE SHUT DOWN BY FORCE

Government agents have shut down another unlicensed broadcaster. On September 29th agents of the U.S. Marshals Service served a warrant on a Santa Cruz, California pirate radio station.

The target was Free Radio Santa Cruz, an FM station running 35 to 40 watts of power while offering round-the-clock music, activism and other local programming.

The marshals, along with agents of the Federal Communications Commission, dismantled the station's equipment and carted it away in a pickup truck. The warrant bore no names, listing as defendant any and all radio station equipment used in connection with the transmissions.

Those running the station face the possibility of further punitive action in the form of hefty fines and even time in jail. The search warrant gave the station operators 20 days to respond in court. The value of the equipment seized is estimated at $5,000, including the antenna agents removed from the roof.

More on this raid is on-line at www.mercurynews.com/mld/mercurynews/news/9797653.htm?1c (CGC, Mercury News)

**

COMMUNICATIONS LAW: TELEMARKETERS LOOSE IN SUPREME COURT

The Supreme Court has turned away a challenge to the federal do-not-call registry. The ruling came on Monday, October 4th and upholds the lower court ruling that says the list does not in any way violate telemarketers rights to freedom of speech.

Under a federal law passed in 2003, telemarketers face fines of up to $11,000 if they call people who sign up for the registry unless they have recently done business with them. Charities, those conducting polls and callers on behalf of politicians are exempt. (Published reports)

**

ALERT: POSSIBLE E-MAIL SCAM TARGETING HAM RADIO

If you get an e-mail with a subject line saying Golden Trust telling you that you have won a lot of money, and its from hamemergency at some unknown dot com, toss it. It may well be another Internet scam targeted to Amateur radio.

Ray Shatzel, W2XC, says over the Internet that he received such a solicitation recently. It told him that he had won $1,500,000 in the Lottery Winners International program held on the July 7th of this year.

Curious, Ray checked it out on the fraud watch international dot com website. There he found out that it is nothing more than another of

the many e-mail scams aimed at getting people like you and me to part with personally identifiable information that could be used in an identity theft scheme. They will also ask for payment of taxes, legal fees or other charges before the winnings can be released. People who fall for it loose what they send in and maybe a lot more.

Our thanks to W2XC for posting this warning to the Internet . He's
one of the good guys who took the time to find out and to pass along the information so that nobody in the ham radio community gets stung. (via Internet)

**

ON THE AIR: HAM RADIO TO CELEBRATE DEDICATION OF CLINTON MUSEUM

Turning to the ham radio happenings, word that special event station W5C will take to the airwaves on November 13th and 14th from the Historic Arkansas Museum. This, to help celebrate the dedication of the William Jefferson Clinton Presidential Library. Operation will be on 40 through 15 meters using various modes including PSK 31. Those making contact will receive a special certificate in exchange for their Q-S-L card sent to Dennis Schaefer, W5RZ, 181 Schaefer Drive, Dover, Arkansas, 72837. (Via E-mail)

**

THE SOCIAL SCENE: GREAT LAKES SUPER SWAP IN MICHIGAN IN NOVEMBER

And the combined 2004 Great Lakes Super Swap and ARRL Michigan State Convention takes place November 5th and 6th at the Harbor Lights School in Holland, Michigan. This years special guest is League President Jim Haynie, W5JBP, who will speak both at the ARRL forum and at the Saturday night banquet. For more information on this fun event take your web browser over to www.hollandarc.org and click on the words swap info. (Via E-mail)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United
States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAM RADIO HELP: ARRL JOINS HOLIDAY TOY DRIVE

The ARRL is joining with the United Way in a project to brighten the lives of kids who lost everything in the recent hurricanes that ravaged Florida.

--

Thats right Don. The ARRL is joing forces with a special United Way drive aimed at brightening the coming holidays for kids in central Florida who might not otherwise be able to enjoy the season. They are the youngest victims of the fall hurricanes that ravaged the area. Suddenly living out of a tent or car.

To help these kids, hams nationwide are being asked to purchase a new child's toy and send it to this special United Way campaign. Be sure to include a QSL card or 3x5 file card showing your name and callsign.

Send your donated toy before Thanksgiving to Ham Radio in care of the The United Way White Dove Project at 50 Kindred Street, Suite 207 in Stuart, Florida. The zipcode is 34994.

As we have often said, children are the future of the nation and the world. They, more than any others, really deserve your support.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.

--

Again, between now and Thanksgiving, purchase a new child's toy. Send it with a QSL card or 3x5 showing your callsign to Ham Radio, in care of The United Way White Dove Project, 50 Kindred Street, Suite 207, Stuart, FL 34994. We will and we hope that you will too. (ARRL)

**

ON THE AIR: HZ1AB PERMANENTLY QRT

The Dhahran Amateur Radio Club has been permanently shut down. This, as the result of telecommunications regulatory changes in Saudi Arabia.

For close to sixty years the Dhahran Amateur Radio Club operated station HZ1AB. Club Secretary Thomas Carlsson, AB5CQ reported that due to revisions made in Amateur Service licensing requirements by the Saudi Arabia Communications and Information Technology Commission, operations were no longer possible.

The HZ1AB callsign has already been reissued to Bandar Salah AL-Harby. Carlsson says that the clubs QSL manager, Leo Fry, K8PYD still has all the logs and will process any outstanding QSL card requests. (WIA News)

**

CONTESTS: RCA QSO PARTY - NOVEMBER 6TH

>From the contest calendar, word that Saturday, November 6th is the date for this years Radio Club of America 20 and 75 meter QSO Party. The event will start at 4 p.m. Eastern Standard Time on 14 point 280 MHz upper sideband and at 8 p.m. E-S-T move to 3 point 910 lower sideband. Both frequencies are plus or minus any Q-R-M. During the party, W2RCA which is the club station of the Radio Club of America will also be activated. Logs and suggestions for this contest go to W2ZE by e-mail to mrraide@cbs.com (W2ZM)

**

CONTESTS: FISTS COAST TO COAST ON NOVEMBER 24

The 4th annual Fists Coast to Coast contest takes place October 24th from 0000 U-T-C to 2400 UTC. This is a CW only event with the object being to contact as many Fist affiliated clubs on as many bands as you can. The contest is sponsored by Northwest Fists club K7FFF. Full rules and certificate information may be found at //www.tomochka.com/k7fff/fnw_c2c04.html (FISTS)

**

DX

In D-X, OH2BH and OH2PM will be in Albania from October 26th to the 31 finalizing Project Goodwill Albania and related activities with the hope of bringing a number of new students on the air. Both operators will be on the air from Albania during the C-Q World Wide SSB contest on October 30th and 31st signing portable Zed A. During this trip the two will be accompanied by representatives of the I-A-R-U folks assisting Albanian Telecom in variety of regulatory issues. QSL cards for contacts made go to the operators home call address. (N4GN)

Also on for the CQ Word Wide SSB contest will be eight operators from the North-East calling themselves Team Antigua. will again activate as V-26-B from Antigua and Barbuda on October 30th and 31st and plan to enter the multi-operator two-transmitter category. Operation will be on all bands with a possibility of some satellite contacts on AO-7 and AO-51 More information is on line at http://n3oc.dyndns.org/v26b/ (KA2AEV)

**

WITH THE YOUNG: THE NORTH AMERICAN YOUTH NET

The North American Youth Net meets every Friday at 23: 00 UTC on 14.329 MHz. According to Steve Anness, KD5OWO, the purpose of this on the air gathering is to get young hams together for technical discussions or just a chance to meet and get to know one another. If you are interested in becoming a Net Control for this gathering e-mail Steve at kd5owo@arrl.net. You can also visit the groups website at http://groups.yahoo.com/group/nayn (KD5OWO)

**

THAT FINAL ITEM: HAMVENTION 2004 THROUGH TEENAGE EYES

And finally this week, its the Dayton Hamvention as you have never seen it before. This is because its through the eyes of the young. And while we can't show you the pictures here, we can bring you some
of the sound:

--

Sara K3OOO: "So you are probably thinking, OK I'm into this, but how
do I get my license? Well, there lots of stuff. There's study guides. Real cheap. Real easy. You go home. You study for a while and do take your test and you pass and you get your license. No Internet. No wires required."

--

That's 15 year old Sara Saeger, K3OOO, who, along with 18 year old
Trevor Conroy, W7TDC, are hosts of a new video about Hamvention 2004 produced for Icom America by of John Webb, W7NWH. But this show is not a commercial for Icom brand ham radio gear. In fact, its as if John borrowed a bit from Cole Porter's grand old Broadway musical.
The one whose title is "Anything Goes":

--

Trevor W7TDC: "Right over here we have DX Engineering, a manufacturer of components that actually allows you to build your own antenna. Antennas can be big. Antennas can be small. But theres one thing thats true about all of them. They all get your signal in the air."

--

Thats the other half of the anchor team and if Trevor sounds excited about building antennas it's because he knows just how much fun it
can be. And while Sara and Trevor are our guides, they are not only young people in the new Icom show. Meet Rebekah Dorff, WG4Y, of Alabaster, Alabama:

--

Rebekah W4GY: "Ive been a ham since I was 8. I got my Tech when I
was 8, my Extra when I was 9 and then I got my DXCC when I was 10 and then I got appointed as the Assistant Section Manager this year."

--

The bottom line. This is a new world of Amateur Radio and a lot of young people are getting excited about it once they find out just how much fun it can be. Thats because it gets you away from a computer screen and gives you new friends all over the world:

--

Unidentified youngster: "Hopefully I will get my license today and I
will finally be able to talk to Russia."

--

If you are one of those who really care about the future of ham radio and want to see what it looks like through Sara and Trevor eyes, then go to www.icomamerica.com/amateur/video and have a look for yourself. Better yet, have your kids -- or your friends kids watch the show with you. Once you do, we guarantee that none of you will ever view ham radio the same way -- ever again.

Our thanks to Ray Novak, N9JA, and the fine folks at Icom America for funding this important new ham radio video and making it available on-line. Again that URL is www.icomamerica.com/amateur/video on the World Wide Web. (ARNewsline™)

A new tool to help hams evaluate the impact of Broadband over Powerline has just been made available on the Internet by an Australian radio amateur. It`s based on the work of a European consortium that is trying to set a world standard for BPL radiation limits. Owen Duffy, VK1OD, is the ham who made it happen:

Current BPL technology works by conduction of signals in the radio frequency spectrum up to about 100 MHz. Existing power lines networks are not ideal RF transmission networks, they will radiate radio frequency energy causing interference to radio communications services, and they will be susceptible to interference from nearby transmitters --- radio or otherwise.

The European Committee for Electrotechnical Standardization, CENELEC, are developing a standard for ``Electromagnetic emissions from access powerline communications networks.`` Access powerline communications networks are commonly termed Broadband over Power Lines or BPL.

The proposed CENELEC standard does not automatically apply globally, though countries like Australia draw heavily on international standards, such as CENELEC`s for their own jurisdiction.

This proposed standard would set limits for the conducted energy and radiated energy of BPL systems. The radiation limit is specified for example as a field strength in dBuA/m in a measurement bandwidth at a specified distance on particular frequency, and its impact will not be immediately apparent to most radio users.

Do you know what the impact of +4dBuA/m in 9 KHz at 3m is on your receiver?

The BPL Interference Evaluation Tool allows evaluation of the impact of BPL interference under the proposed CENELEC standard given a set of location/application specific parameters. Go to the BPL Interference Evaluation Tool at http://www.vk1od.net/bpl and enter the details for your site and discover the impact. (WIA News via ARNewsline(tm) October 22 via John Norfolk, dxldyg)

FCC RULE CHANGES TO PROMOTE BROADBAND

Here in the United States, very little attention appears to have been paid to two other FCC actions amid last weeks FCC decision on BPL. But both are designed to help promote different forms of broadband Internet access. This is important because they will be giving Broadband Over Powerline a run for the corporate dollar profit.

Amateur Radio Newsline`s Bruce Tennant, K6PZW, has more:

In another vote taken at their October 14th meeting, the FCC loosened restrictions on fiber-optic networks built by local phone companies, encouraging them to make greater investments in so-called fiber-to-the-curb`` and fiber-to-the-home networks. According to the Commission, and as reported in a bulletin from CQ, the ruling will encourage deployment of fiber optic broadband networks capable of delivering advanced data, video and voice service by local telephone companies.

Prompted by the decision, several big telephone companies said they would move more rapidly to build fiber networks to homes. SBC says it now plans to provide 18 million households higher speed Internet services in two to three years, rather than five years as previously announced. So far, Verizon Communications has been the most active in building residential fiber networks.

And there is more. The day after the BPL vote was taken, the FCC`s Wireless Telecommunications Bureau announced a joint effort with the U.S. Department of Agriculture`s Rural Utilities Service. This, to advance the deployment of broadband wireless telecommunications across rural America.

It`s called the Rural Wireless Community VISION Program. Its purpose is to bring experts from both agencies into rural communities selected as models to help provide technical, financial and other assistance in launching wireless broadband services in those areas.

All of this adds up to a lot of competition for BPL from the day it gets going.

For the Amateur Radio Newsline, I`m Bruce Tennant, K6PZW, in Los Angeles.

As we go to air, it is unclear whether either of these actions are efforts to promote multiple types of broadband, or, possibly a no confidence vote in the long-term potential of BPL.

More information on the program is available online at http://wireless.fcc.gov/outreach/ruralvision/index.html. (CQ)

Do you have a news background? It's not apparent. There's a difference between a hatchet job like the Swiftees, and the derivative (and now aborted) Sinclair slam, and the usual campaign rhetoric. The news media isn't obliged, for example, to find out what the local Ku Klux Klan wizard has to say about a discrimination case, and Halperin was doing what responsible news media do...providing balance while measuring just how much balance is needed. CNN's debate analysis is one such acknowledgement that the responsible news media does not parrot what either candidate says verbatim. In this case the misrepresentations by the Kerry campaign pale when compared to the disconnect from reality that the Bush campaign is trying to sell. Quoting: "MILBANK: I think there is a bias in favor of fact versus fiction. And I think that the Halperin memo, if you read what he's actually saying at the time it was written, he is saying there has been a larger number of misstatements, of dishonesty on the Bush side." (http://transcripts.cnn.com/TRANSCRIPTS/0410/17/rs.01.html or http://tinyurl.com/6t456).

Much of the problem lies in the fact that the electorate is ill-prepared to handle the level of complexity when discussing the method by which social security and medicare are funded, or what the real deficit is, or what happens when the rest of the world decides that they've had enough of holding "promises" of payment (the unchecked current account balance and trade deficits that the U-S has racked up) and decides to swap their dollars for Euros. In the process of simplifying for the uniformed, a lot of that detail is lost, making what appears to be a

"misrepresentation". Bush, on the other hand, repeats incessantly claims which any well-informed person knows to be bogus, claims like Iraq is under control (you know that the U-S death toll is over 1100 now....we're losing troops at an ever-increasing clip, now over 100/month. At this rate, we'll have doubled the U-S death toll before October next year, when it took 6 months more, with a "major" military assault at that, to get to this point. No wonder parallels to Vietnam are made ever more often).

You realize, first of all, that (at least until recently) the rise in the cost of oil, when measured in Euros, was 1/10th the rise in U-S dollars. You also realize that Bush's "efforts" to control the cost of oil may be a ruse, seeing as the campaign is running now in a manner which shows that they know they may lose this one, so it's a matter of cleaning off the table before the game gets raided, so as to "take care" of the administration's friends in the oil industry before Bush loses the keys to the car. Why do you think the Bush administration *continues* to buy oil for the strategic oil reserve, when there's virtually no place to put it? He's running up the market is what.

"Prosperity's right around the corner..." Even for those getting rich off this market adjustment, it's not really making a killing if you get twice as much income, in dollars worth half as much.

Watch what happens when Kerry wins. Stock market - up by 20%. Oil - down $15/bbl. Dollar - up 5% (can't go much further....there's that nasty deficit, after all). Do you think that the world, who to-a-one wants Bush out, is going to let us off the hook before we boot him out? The world has the power to bring the U-S to its knees economically. Fortunately for Americans, they like us - just not the guy in the White House. If Bush wins, there will be no holding them back. I'd short the dollar. That day.

Press Releases
Date: 22.10.2004

As the Boston Red Sox attempt once more to reverse the 'curse of the Bambino' by taking on the St Louis Cardinals in baseball's World Series, BBC Radio Five Live will be there to convey all the excitement back to listeners at home, with full live commentary on Five Live Sports Extra.

The Red Sox haven't won a World Series since 1918, two years before they sold baseball legend Babe Ruth to arch rivals New York Yankees.

Since then the Sox have endured almost a century of misery, failing to win the World Series a single time.

This is the first time since 1967 that they have played the St Louis Cardinals, and on that occasion the Cardinals won.

Up All Night (1.00-5.00am daily) will have live coverage from the games throughout the series.

Five Live Sports Extra will carry live commentary of the first six games, with the seventh game, if it goes that far, being on BBC Radio Five Live.

Simon Brotherton will commentate on each game with Josh Chetwynd, catcher for Great Britain's team, providing expert analysis.

The first two games are at Boston's ground, Fenway Park, on the nights of 23 and 24 October, then the next three are at Busch Stadium, home to the Cardinals, on 26, 27 and 28 October.

The sixth and seventh games, should they be required, are back at Fenway Park on 30 and 31 October.

Five Live Sports Extra coverage from Boston start at 12.25am and from St Louis Busch Stadium at 12.55am.

Listen to Five Live on AM, on digital and online.

Just wait until they fire up a BPL injector in your neighborhood and you
have to try and listen over the top of the noise those things generate.
You can forget using 2-80 Mhz within a mile of one of those injectors

## 2688. New Satellite Radio Newsgroup

I've noticed that there have been a decent amount of posts here regarding satellite radio. It comes as no surprise that there ought to be posts somewhere about one of the fastest growing technologies ever, but it did surprise me that there isn't any newsgroup dedicated it satellite radio. I have submitted a proposal for alt.radio.satellite in alt.config and I've come here just to gauge any interest people may have in posting to the proposed group and to justify if it is worthwhile or not. If some could reply showing their interest or lack thereof, it would be greatly appreciated.

Thanks,
Mark VO1ONE

# 2689. Radio 4 Programme 'In Touch' Tuesday 26 October

> Should this new fairness doctrine cover internet radio, satellite radio,
> satellite TV, and cable TV?

Never mind the rest of it....here's the deal. As I've said elsewhere, the reason for the Fairness Doctrine is due to the fact that broadcast spectrum is a limited commodity, where the existence of one station eliminates the possibility that another can be in the same area on the same channel (and a few adjacent, too). This hard, physical limitation means that there is no opportunity for a diversity of voices...unlike the printed word, where all it takes to get your opinions out is a printing press and a ream of paper. The Fairness Doctrine simply encouraged (even coerced) broadcasters to air opinion/issue programming, and provide an opportunity for those in dissent to provide their opposing view...analogous to "sharing" the printing press.

Satellite radio is subscription, so listeners have already made their choices in the most concrete mannaer possible...with their wallets. There is no practical limit to the number of internet radio stations, and likewise satellite and cable TV doesn't use spectrum, and so has no practical limit on how many service can be delivered. Thus, in the absence of those limits, there is no need to promote diversity of voice and opinion. It's inherent in the service.

The Fairness Doctrine is needed only for the medium where a diversity of voices is reduced when a service limits, by its existence, the ability for others to be heard.

# 2694. AWR specials

Newsgroup: rec.radio.broadcasting
Date: 2004-10-23 21:19:10 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <clehse$7mp$1@xuxa.iecc.com>
Source record: 3728
Cross-posted to: rec.radio.broadcasting,rec.radio.shortwave

Two very important historic programs are scheduled for broadcast on consecutive weekends in "Wavescan", the regular DX program from Adventist World Radio. One program features a 60 year old broadcast from an American radio station in New Zealand, and the other features what is believed to be the world's first off-air recording from an old wireless station in California, a recording that is more than 90 years old..

Over in New Zealand, the noted radio historian, David Ricquish, was performing a spate of research in the sound archives of Radio New Zealand in the picturesque south island city of Christchurch, when he came across a very significant piece of old radio history. He had re-discovered the first, inaugural broadcast from the AFRS station 1ZM in Auckland in the north island.. Originally, station 1ZM was a privately owned commercial station that was subsequently taken over by the government and then loaned out to AFRS, the American Forces Radio Service, back in April 1944. The original recording from this station, that was one of the famed "Mosquito Network" stations, is thought to be the only example now in existence of an off air broadcast from an AFRS station in the Pacific. This orginal recording was presented as a major feature in the shortwave programming from Radio New Zealand International, and RNZI has made it available for worldwide usage in the AWR DX program, "Wavescan".

One week later, listeners to "Wavescan" will be able to hear an off-air recording that is even older. Just recently, Glen Sage in Portland, Oregon, uploaded an old Morse Code recording onto his website. This website gives the content of the message which was transmitted in the old original version of the Morse-Vail Code. A further spate of research would seem to indicate that this recording. on a cyclinder covered with tin foil. was made off-air from a Morse Code broadcast that was transmitted from station TG in San Francisco shortly before 3 pm on Monday July 4, in the year 1910.

The AFRS-1ZM broadcast in "Wavescan" is scheduled as follows:-
AWR worldwide network & associated stations - Sunday October 31
WRMI Miami 6870 kHz: Sat night 10:30 pm ET, 0230 UTC Sunday Oct 31 UTC

WRMI Miami 6870 kHz: Sun night 11:00 pm ET, 0400 UTC Monday Nov 1 UTC
NASB-RCI Sackville Canada in digital mode - Sat Oct 30, 11900 kHz

The 1910 radio broadcast in "Wavescan" is scheduled as follows:-
AWR worldwide network & associated stations - Sunday November 7
WRMI Miami 6870 kHz: Sat night 10:30 pm ET, 0230 UTC
Sunday Nov 7 UTC

WRMI Miami 6870 kHz: Sun night 11:00 pm ET, 0400 UTC Monday
Nov 8 UTC

Dr Adrian M. Peterson
DX Editor,
Adventist Wolrd Radio.

I live in a big city. The radio spectrum here is saturated, and I don't
think it would be much more diverse if there were an infinate number of
possible stations.

>The Fairness Doctrine simply encouraged (even
> coerced) broadcasters to air opinion/issue programming, and provide an
opportunity

It discouraged political programming in the sense that it forced opposing
viewpoints. No political programming is easier than trying to strike a
subjective balance.

There was alot of bad radio forced on the public during the fairness
doctrine days. Well, people weren't really forced to listen. They just
tuned out.

Just as a nit-pick, and I don't think it changes the thrust of your point, but there is also alot of free audio on the non XM and Sirius sattelites.

> The Fairness Doctrine is needed only for the medium where a diversity of voices is
> reduced when a service limits, by its existence, the ability for others to be heard.

People who want to be informed are informed. They can read newspapers, listen to news stations, surf the net, etc. I don't think people who don't much care to be informed have ever appreciated the accidental information from their favorite radio station. They just tuned out.

And how do we keep any sort of fairness doctrine from being used as a tool of political harassment?

For sale:

Partial interest in full-time AM in large city in
Australia. Perth, WA (Western Australia). In
population, this is the 4th largest city in the
country. About 1.7 million.

CP for 1692 KHz, non-directional, 400 watts, 24 hours.
Licensed to Perth.

Less that $50,000 US!!!!!

Active (huh!) or inactive investors with $10,000 min.
are welcome. All investors would be on the board with
full voting rights if desired.

For $140,000 US we'd get three licenses with a total
predicted listenership of about 2 million people!

I have checked the Australian equivalent of the FCC
(ACA....Australian Communications Authority)and the CP
is real.

I am a semi-retired radio engineer living in Macon,
GA. My tel. is: (478)741-1710.

No "AM bashers" or other negative nabobs, PLEASE!

Hurry! (Sharp)operators are NOT standing by! Hi!

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"

Hello Folks,

I would like to see a Usenet alt.radio.satellite Newsgroup established.

Presently there are of couple of Web Forums run by individuals who also marketing XM and Siruius Satellite Radios where various topics concerning Satellite Radios are discussed. These Web Forums are the only places were individuals can visit and discuss these Satellite Radio topics. With close to 2 &#65533; million Satellite Radio subscribers I fell that the present Web Forums operated by XM and Siruius Satellite Radios retailers are inadequate and could also be considered inappropriate because of conflict of interest concerns.

At times for various reasons these Web Forums become unavailable. Sometimes the Web Forums experience server crashes, which could led to valuable information being lost. Also the personal views of the operators of these Web Forums sometimes lead to censorship. Considering all the disadvantages of the present Web Forum situation I believe the close to 2 &#65533; million Satellite Radio subscribers deserve to have a to have a Usenet alt.radio.satellite Newsgroup established.

I encourage the members who frequent Usenet rec.radio.broadcasting Newsgroup to support the efforts to create a Usenet alt.radio.satellite Newsgroup.

Best Regards,
Fred

> There is alt.satellite.radio.europe.

So, what about satellite radio outside of Europe? Besides, that group was improperly created to begin with. alt.radio.satellite would be more apt to conform to existing heirarchy, and would include all of satellite radio, not just satellite radio in Europe. That would exclude XM and Sirius which between them have over 3 million subscribers. Worldspace operates not only in Europe, but Africa and Asia, as well. Now, we have MBCo in Japan on the horizon; where will they discuss their satellite radio?

# 2704. Podcasts: blogging for the ears

Newsgroup: rec.radio.broadcasting
Date: 2004-10-24 23:30:50 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <clhdva$aoa$1@xuxa.iecc.com>
Source record: 3744

Sunday October 24, 2004
Podcasts: blogging for the ears
The LA Times

First came pirate radio, then Internet radio. But in the past month, a new way of circumventing the broadcast corporations has emerged: podcasts.

Tune in to these blog-based homemade radio shows and you'll hear any number of things: a weekly hourlong program about board games; a daily amateur photography show hosted by an Australian computer programmer; regular people, unschooled in the ways of radio, talking about anything and everything the way real people talk - clumsily, with curses, dead air and all.

If you've never heard of a podcast, don't worry. Neither has Google. Type "podcast" into the search engine and it yields results but also asks, "Did you mean: broadcast?"

Well, yes. Sort of. Podcasts are broadcasts only in the loosest sense. They don't use megawatt transmitters to send signals tens or hundreds of miles like terrestrial radio. Listeners can't hear them live because they are prerecorded sound files; they don't stream in real time like Internet radio.

A sort of TiVo for amateur online audio, podcasts are radio-style audio files posted inside blogs as MP3s that can be downloaded to an iPod or other portable player. And they represent the next wave of peer-to-peer content sharing - unlimited by available FM/AM spectrum, untouched by FCC regulations, portable and full of possibility.

An audio extension of written blogs, podcasts are almost exclusively talk at present. They are also almost entirely hosted by tech-savvy "early adopters" who are working out the kinks. But that is changing rapidly as the technology for producing and distributing podcasts becomes easier to use.

A month ago, the only podcast was "Trade Secrets," a daily news-and-technology talk show co-hosted by podcasting's pioneers: former MTV VJ Adam Curry and software developer Dave Winer. Curry is the brain behind iPodder (software that automatically locates podcasts); Winer is the developer of the format that lets podcasts be found.

In the four weeks since "Trade Secrets" was born, the number of podcasts has jumped to at least six dozen. Podcasts don't follow a traditional broadcast model. They follow in the footsteps of blogs.

In the blogging world, success isn't measured in market share and ad dollars. It's measured in the personal satisfaction of creative expression and the organic growth of a relatively small audience via word of mouth.

Already, that word of mouth is strong. According to Winer, listeners to "Trade Secrets" jumped from 1,000 to 6,000 in a single week.

"One of the reasons that blogging succeeded was it didn't just lower the threshold of publication to zero, it made it as easy as e-mail." said Linux Journal senior editor Doc Searls.

In 1999, when Searls first began blogging, he said there were just a couple dozen other bloggers. Five years later, there are at least 4 million. Podcasting, he said, has similar potential.

: >
: > :
: >>
: > 1. The Fairness Doctrine could be resurrected and rewritten to assure a
: > balance of voices/opinions are heard on the public airwaves.
:
: So, why doesn't the government also require newspapers to have a balance
of
: voices and opinions?

Is this a rhetorical question or what? That's the first thing taught in
Mass Media 101. There is a limited amount of spectrum space available for
utilization. That's one of the reasons why the FCC was (supposedly)
created (I remember when the FCC was NOT a lap dog for the broadcasters).
To manage a natural resource which supposedly belongs to the people
(although that is now empty rhetoric). The same conditions hardly apply to
the printed media.

:
: What are the details of this rewrite? The old fairness doctrine was a
club
: for partisians and others with an ax to grind. How would the new
fairness
: doctrine keep the political partisans and kooks from harassing media
: stations with nusiance complaints? Who would define what a nuisance
: complaint is?

so what do we have now? Rushbo "Oxy" Limpballs 24/7

:
: Should this new fairness doctrine cover internet radio, satellite radio,
: satellite TV, and cable TV?

no

:
: Yeah, people listen to what they want to listen to. I have no idea if
the
: IQ factor is up or down. I am sure people would be stupid to be
listening

: to things they don't want to listen to.

The people listen to what the corporate Crud Channel goons (and their ilk) shovel out of the broadcast latrine.

:
: I am also sure there has never been as much bad radio as there is now.
: There has never been as much radio as there is now. There are more
: stations broadcasting more hours than ever before. Too bad. As a radio
: hobbyist, I miss the days of easy coast to coast dx'ing.

The FCC responded to what the broadcasters wanted and now both AM & FM have been technically ghettoized.

:
:
: I dislike most of the stuff on the radio. So what? There's still plenty
to
: listen to. Nobody makes me listen to Limbaigh, and I don't. I can't
stand
: Sport Babble but I don't have to. Mostly I listen to a local FM Jazz
: station and US domestic shortwave radio. For me, radio has never been
more
: entertaining. There are also some local Spanish and Polish language AM
: stations here with good music. Very little of this was around 30 years
ago.

Yup. There's sure al ot of cariety. A "classic rock" and "hot hits" and "modern country" station in every town. All voice tracked with the same 20 minute spot load anmd 200 song playlist. And news? What is that? Where did it go?

:
: When was there more radio diversity? When there were three of four radio
: networks, each playing their own similar so-so comedies or dramas? When
: each of the top 40 stations in the US were playing "Muskrat Love"? The
: radio industry is like the rest of the entertainment industry. As soon
as
: somebody comes up with an idea which grabs a part of the audience, that
idea
: gets reused over and over in each market.

See above. You are equating quantity with diversity. I laugh at the way "top 40" has been fractionalized into "classic rock ("B" side losers)," "hits of the 60s & 70s," "alternative," and the latest insanity, "old school, " ad nauseum. Give me a break! That is hardly diversity.

Diversity and creative died about 15 years ago. About the time the big push for deregulation began.

:
: If that's true, then the problem will fix itself. These overpriced radio
: stations will soon go for giveaway prices. You'll buy a radio station

and
: so will I. I will realize that your programming ideas are so good, I'll
: copy them all!!

That's the whole point! YOU can't buy a radio station and neither can I. Radio stations have become so overpriced thanks to the accumulation of corporate control that few single ownership outlets remain. I love having all my programming delivered voice tracked from some studio 1500 miles away. The problem is solving itself: radio is dying.

# 2709. Re: Is that a radio wire?

That shouldn't be all that shocking. If it was a "wire" it could have been for almost anything. Remember he is a "Sitting President" with all of the crazy security that goes with the job. It could have been something to do with that. You didn't see any overt signs of security while watching the debates on TV, but I'll bet you there was plenty you didn't see.

I never said that oil would be $30/bbl. If you do the math (something which seems to be foreign for those with your political bent) you'd see that I was predicting that oil would return to a more manageable, albeit more espensive, $40/bbl.

> If Kerry wins we will be back to Jimmy Carter Style Economy, Oh those were
> the days, Low Inflation and Interest rates that everyone loved...

At least we were paying for the economic sins being committed then. We were paying our bills, and giving the rest of the world a reason to hold on to dollars. And even then, Carter's deficit was 1/10th what Bush's is now. How long do you think it'll be before the investors in our dollar (China and Japan, mostly) will seek better returns and a greater likelihood of retaining the value of their investment elsewhere? If interest rates don't rise soon, that's exactly what's going to happen.

The Fairness Doctrine worked well for decades in that it held stations to the one of the responsibilities required of them under the terms of their licenses--to air alternative points of view. It gave alternative points of view a right to time on the public airwaves, something sorely lacking today. In fact, it's been an ever increasing spiral down the tubes since the FD was repealed. What passes for public discourse on the airwaves today--even with the expanding universe of outlets--is a travesty. And you and I have no right to respond in kind. The FD kept agendas from spinning out of control and kept most discourse civil and centered.

As you must know, Frank, newspapers do not require a license to operate and the Communications Act does not designate them as a public resource. The fact is--the FCC violates the spirit and letter of the Act when it comes to its stewardship of licensed radio and tv stations. And no one in Congress cares because of copious amounts of NAB money.

In short, it all stinks.

Anyone heard Radio Huaya lately? (Wasn't it on 2390 kHz?)

---

"For roughly three decades, Radio Huayacocotla (pronounced hway-ah-koh-KOHT-lah), a 500-watt short-wave community radio station deep in the heart of rural Veracruz state in east-central Mexico has served as an audio lifeline for some of this country's poorest and most overlooked people. Broadcasting eight hours a day, six days a week, in a region where the illiteracy is high and the technology low, the station is many people's main news outlet. And as the only licensed radio station operated primarily by and for indigenous Mexicans, it's a unique source of two other commodities that some deem crucial to this community's long-term survival: regular contact with distant loved ones, and the freewheeling, improvisational music called son huasteco."

Of course you can ... an AM station that probably can't make money.

Two recent big-city AM sales:
WBIX (Boston suburb) 40 kW day, 2.5 kW night, to an INDIVIDUAL for $7 million.
WPLC (Washington suburb) 1 kW day, 48 watts night, to Bonneville for $4 million. But an astute friend suspects that Bonneville could diplex it on their WTOP towers and get more day power and possibly "real" night operation. And just think, with 450 kHz spacing everybody driving past a joint-site WTOP/WPLC would hear them no matter where their AM radio was tuned.

# 2717. Cuba/USA: Cuba decries US radio, TV broadcasts to island

Newsgroup: rec.radio.broadcasting

Text of report by Caribbean Media Corporation (CMC) news agency
22 October 2004

New York

Cuba said it was prepared to use "every possible measure" to repel any form of aggression against the Communist state as it renewed its criticism of the United States over its decision to establish a radio and television station to broadcast material to the island.

Ambassador Rodeny Lopez told the International Frequency Registration Board (IFRB) of the International Telecommunication Union (ITU) on Thursday [21 October] that Washington was using a military plane to broadcast the material to Cuban citizens.

He said Radio and TV Marti underscored Washington's policy of tightening the four-decade old trade embargo against Cuba.

Looking at the video - not the stills on the link - I don't think it's a wire. There is a similar crease on his shirt on the right side of his tie, a little higher though, as he adjusts his tie and turns slightly away from the camera. Any radio aids, you'd be looking for a Telex reciever in his ear, not a wire on his chest. If I'm wrong and it is a wire, it's likely for a mic, recording any great moments of oratory history. Since it was Geo Dub, there was none.

# 2720. Suddenly, US satellite radio matters

Newsgroup: rec.radio.broadcasting
Date: 2004-10-26 12:41:39 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cllgm3$aj6$1@xuxa.iecc.com>
Source record: 3657

October 25, 2004
By Eric Hellweg
CNN/Money contributing columnist

Boston - The satellite radio business has been cranking up the volume these past few weeks.

Sirius Satellite Radio struck first with its hiring of Howard Stern. That announcement pushed Sirius's stock up more than 15 percent. The stock has since settled back down a bit. Then last week the company's much larger rival, XM Satellite Radio, struck back: It announced that it would broadcast Major League Baseball games.

(snip) The Wall Street Journal reported that XM paid several times Sirius's offer for MLB rights. (Sirius earlier paid $220 million for rights to broadcast National Football League games.)

(snip) A funny anecdote leads us in: I went to the Patriots game a week ago (trying to distract myself from the Red Sox being down 3-0 to the Yankees at that point) with a friend who is a Sirius subscriber. During a break in the action, an advertisement for Sirius radio came over the loudspeakers, and my friend -- apropos of nothing more than perhaps the beer in his belly and the Pats doing well -- decided to stand up and scream "I have Sirius and I love it!" He was immediately approached not by security but by people who asked about the service and wondered if it was worth the $12.95 per month.

Why is this incident telling? Because despite being around for several years, satellite radio has only recently jumped into the public consciousness, mostly because of the Howard Stern announcement.

Love him or hate him, Stern is a radio powerhouse. In this relatively early stage in the satellite radio war, strong content plus promotion works. That can go a long way toward helping Sirius close the gap between its 700,000 subscribers and XM's 2.1 million.

Sirius is already seeing a strong boost as a result of the Stern announcement, but this will pale in comparison with the number of consumers who will sign up for Sirius once Stern leaves analog radio in December 2005.

Granted, Sirius is paying a lot to secure Stern, and when a company starts to justify a move by claiming that it needs to sway only 10 percent of Stern's listeners to pay for the deal, it's worrisome. That's fuzzy math.

But Sirius could make back Stern's salary if he brings in 200,000 additional subscribers each year. And with a marquee name like Stern's, the self-proclaimed "king of all media" just may make it work.

(see CNN/Money
http://money.cnn.com/2004/10/25/technology/techinvestor/hellweg/ for the
full article)

# 2721. New website: KQIV FM-107 Rockin' in Quad

Newsgroup: rec.radio.broadcasting

From: millerjoel@hotmail.com
Message-ID: <cllgm4$aji$1@xuxa.iecc.com>
Source record: 3656

http://www.rockininquad.com

September 15, 1972 - 10:15pm. KQIV in Lake Oswego, Oregon, signed on the air at 106.7 FM. Owner, Walter J. M. Kraus, Entrepreneur, puffed on his over-sized, custom-rolled cigar and waited for the money to pour in. That never happened.

As this site develops (we started on September 18, 2004) we will tell the story of KQIV in words, pictures and sound. KQ4, as it was called, was to be the "new wave" in Portland radio that would shake the market, leaving all other radio stations behind. Progressive album rock and "Quadraphonic" sound were the tools that would shape this radio revolution. Well, that was the plan, anyway. Like many great ideas, KQ4 fell far short. We will look at KQ4's ownership, management, staff, music, promotion and more. And...have some fun doing it!

We'd love to have your input. Share your memories, send in any artwork you might have, dig out those old newspaper articles, MP3 any old airchecks and send them our way. We especially encourage input from KQ4 listeners. If you remember the station, let us know. Include "then and now" photos if you have them. We will post your thoughts anonymously if you desire.

We will be adding pages as we get the goodies. Check back on a regular basis!

How did the fairness doctrine keep adgendas from spinning out of control? I mentioned Chicago's Howard Miller show. That show would frequently get as loud and obnoxious as Limbaugh or Hannity, back when the Fairness Doctrine was in full force. I haven't seen their shows, but I understand Joe Pyne's and Wally George's shows were similiar. The stations would run boring counter programming on other hours to keep the FCC happy.

It's my opinion that the current popular bombastic programming is just another radio copycat phenonema. Success breeds imatators.

>
> As you must know, Frank, newspapers do not require a license to operate

Let's imagine most newspapers were controlled by one sydicate. Would we be better off if they were licensed? Justifications could be manufactured. They use paper from trees grown on public land. They are transported on public roads. Would newspapers serve us better if we gave the government the right to change their ownership or shut them down?

>The fact is--the FCC violates the spirit and letter of the
> Act when it comes to its stewardship of licensed radio and tv stations.
> And no one in Congress cares because of copious amounts of NAB money.

> John Figliozzi

And I still think these are reasonably good questions:

How would the new fairness doctrine keep the political partisans and kooks from harassing media stations with nusiance complaints? Who would define what a nuisance complaint is?

Frank Dresser

> the printed media.

But that limatation has been relaxed. There have been many new licenses
issued since 1980, and there are many more 24 hour stations. Given the open
situation, I'm sure there many open radio frequencies in most markets. TV
channels haven't been saturated since the introduction of UHF in the early
50s.

Should the fairness doctrine apply in markets in which there are open
frequencies and channels?

>

> : satellite TV, and cable TV?
>
> no

Why not? Despite their large bandwidth, satellites don't have an unlimited
number of frequencies. The FCC currently has jurisdiction over wire
communications, but they generally have never enforced program content
there. Isn't it unfair that fairness, as defined by the government, isn't
enforced there as well?

>
>
> :

But why do they listen? Is it because they have single digit IQs? If they
are really that stupid, is regulating their radio and TV programming all it
takes to make them smarter?

>

> it go?

They still sell newspapers. And the internet is a better newssource than
radio and TV ever was. If radio and TV disappeared entirely as a news
source, people would still have no excuse for being uninformed.

>

Sure it is. It's just not the kind of diversity you want. It isn't what I
want, either but I still have alot of good choices.

>

Stations go on sale from time to time. They aren't cheap, but that's a reflection of the revenue they can bring in. And the revenue reflects the number of listeners.

I can buy time right now on brokered stations. There are several around here, and most of them have open air time. There are probably similar situations in most markets.

Air America is buying time on at least one Clear Channel station.

The shortwave stations are a good bargain. Time goes for around a dollar a minute, and most of the country gets covered.

It still happens and has nothing to do with the fairness
doctrine.

Did you read the last two words -- public airwaves? Spectrum
was considered a limited resource and government permission was
required to use it. In return, conditions were imposed.

There is no apparent shortage of newsprint for purchase.

And you would be wrong. Further, with the coordination/transition to DTV, there's no space anywhere, in any market. And besides, twice a finite number is still a finite number.

> Should the fairness doctrine apply in markets in which there are open
> frequencies and channels?

No, because a licensee should do their part to represent all divergent views.

>> : Should this new fairness doctrine cover internet radio, satellite radio,

Satellite spectrum is, by definition, not broadcast spectrum....it's just a band that some operators choose to operate un-encrypted. And subscription satellite is another animal altogether, like cable.

> The shortwave stations are a good bargain. Time goes for around a dollar a
> minute, and most of the country gets covered.

Covering the country is not the same as getting gross impressions. The reason why shortwave is a dollar a pop is because the cost on a cpm (cost-per-1000) basis is, still, probably higher than the most expensive station in the most expensive market.

# 2734. John Peel RIP

Newsgroup: rec.radio.broadcasting
Date: 2004-10-27 06:50:06 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <clngeu$qkd$1@xuxa.iecc.com>
Source record: 3672
Cross-posted to: alt.pirate.radio,alt.radio.pirate,rec.radio.broadcasting,uk.radio

From: http://www.offshoreradio.co.uk/djsn2p.htm

John Peel Born 30th August 1939, in Heswell, Cheshire, he was educated at Shrewsbury public school and did his National Service in the Royal Artillery. He then worked at Townhead Mill in Shropshire before moving to America. His first job there was with the Dallas Cotton Exchange but his love of the blues led to him making a guest appearance on a local radio station. When the Beatles took off in America, an English accent, especially an almost Liverpudlian one, was much in demand. John became the resident Beatles expert on KLIF in Dallas. A full time job on KOMA in Oklahoma City followed, then KMEN in San Bernardino. An unsuccessful marriage prompted his return to the UK where a neighbour of his mother's put him in touch with Radio London. On the basis of his experience on American radio, John was immediately given a job and joined the station in March 1967. As always, the newest recruit had two air-shifts. John deputised for whichever DJ was on shore leave and presented the midnight-2am show. While working in America John had become very aware of the music of the "underground". It was the hippy era and dozens of new bands were emerging. John began to feature the best of this new music on his late night programme which came to be known as The Perfumed Garden. It immediately won a large and loyal following and was hugely influential. He stayed with Radio London until its close-down when he became part of the founding team of Radio One. (The Cats Caravan web-site did have a recording of the last ever Perfumed Garden but has either moved or closed down. Does anyone know which?) More than thirty years later John is still on Radio One, the only survivor since the start, and still playing new, challenging, music. He has also presented shows on the World Service for many years and hosts the weekly Home Truths magazine programme on BBC Radio Four. John was awarded an OBE in 1998. There is another photo of John in Dave Hawkins' photo album. Many club disc-jockeys release CDs of their mixes but now the DJ with the most idiosyncratic taste of all has joined them. A recording of John spinning the discs at Fabric was released on 2nd December 2002. As you would expect, it is a varied selection, including Motown (The Velvelettes), doo-wop (The Capris), indie (Joy Division), reggae, funk, rock, the Kop Choir singing You'll Never Walk Alone - the anthem of John's beloved Liverpool FC - and his all-time favourite: Teenage Kicks by The Undertones. Details and audio clips can be found at www.fabriclondon.com or it can be ordered through Amazon. The Radio Academy, a trade body for people who work in the industry, has recently launched its own Hall of Fame honouring those who have made an outstanding contribution to UK radio. John Peel was inducted into this august group in December 2003. You can find details here http://www.radioacademy.org/halloffame/peel_j/index.html.

26th October 2004: We have just heard the sad news of John's death. The BBC has reported that he died of a heart-attack while on a working holiday with his wife in Peru. The Pirate Radio Hall Of Fame will be paying its own tribute to him as soon as possible but, in the meantime, you can read more about one of the great broadcasters of the last forty years on the BBC, NME and Guardian web sites. You can also pay your own respects here.

Click on site for audio clips:
John Peel in The Perfumed Garden on Radio London on 18th July 1967. Tape courtesy of Ray Andrews (duration 3 minutes 6 seconds)
John Peel ending the last ever Perfumed Garden on Radio London on 14th August 1967. The programme had continued through the night on this one occasion and John was about to hand over to Chuck Blair with the final Breakfast Show. Recording kindly provided by Albie Somerset (duration 3 minutes 55 seconds)

This is a straw man. Newspapers aren't controlled by one syndicate. Have never been
(although USA Today comes close, if they had no other local competition) and probably
never will. So your argument breaks down around your presumption.

> And I still think these are reasonably good questions:

> How would the new fairness doctrine keep the political partisans and kooks
> from harassing media stations with nusiance complaints? Who would define
> what a nuisance complaint is?

"Responsible" spokespersons were, in the past, either sober citizens (and some maybe
not so sober) and representatives of community organisations, when I worked in radio.
The management would, in the interests of diversity, bring in the occasional citizen
who would espouse a view quite contrary to the company's. In any event, management
was capable of keeping the occasional raving lunatic off the air...unless the raving
lunatic succeeded in being entertaining enough that management would let him on, if
only to embarrass him.

And public files are thick with nuisance complaints. Why would you think that a
broadcaster should be immune to them? No need to restrict. Bring 'em on.

OK, how about one paper towns? Would it be a good idea for the government
to ensure that the opponents of the editorial policy of the paper in a one
paper town got their own space in that paper?

Politics in the US seems to be going through an unusually nasty period lately. I have no doubt the Republicans and the Democrats would be actively searching out or creating local pressure groups, in order to push media stations around. Maybe I'm wrong about that and my opinion of the likely politicization of the fairness doctrine just reflects the lower regard that I've developed for both parties over the last 20 years. But I honestly think any attempt to revive the fairness doctrine is going to turn into a real can of snakes. Better to leave bad enough alone.

Frank Dresser

# 2738. For sale: Partial interest in AM daytimer in Alabama.

Newsgroup: rec.radio.broadcasting
Date: 2004-10-27 20:02:50 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <clouta$pn7$1@xuxa.iecc.com>

Here in Chicago, we just had an AM xband station go on the air a year ago.
Other frequencies sound open. One street gang related pirate station was
operating on an open FM frequency here. We also have a couple of reletively
new low power UHF stations.

>

Right. And viewers/listeners don't really make the distinction between
cable and satellite and broadcasting anymore. If 90% of a person's TV
channels are uneffected by the fairness doctrine, does the fairness doctrine
have any effect on the viewer?

If the fairness doctrine is really a good idea, shouldn't it effect every
station a consumer gets?

Just why is the fairness doctrine a good idea?

It's hard to say exactly how many people listen. But, as far as the rate goes, it used to be alot higher back about 20 years ago when stations such as WRNO and WINB were selling time. Since then, there must have been at least fifteen SW brokered transmitters going on the air. It's a buyers market now.

For internet radio listeners ...

http://www.radioshowlinks.com/
A Directory of Internet Radio Shows and Stations; Listen Live or On-Demand. The directory includes Schedules and Stream links for Talk Radio, Current Events, Business, the Arts, and other programming.

Many top talk radio shows can be found on the Popular Internet Radio Show channel including Rush Limbaugh, Dr. Laura Schlessinger, Bill O'Reilly, Sean Hannity, Al Franken, and others:
http://www.radioshowlinks.com/display.aspx?id=72471

Another channel includes many popular NPR and other Public Radio shows including streams directly from National Public Radio as well as webcasting internet radio stations from the NPR network. For example, this channel has top National Public Radio shows:
http://www.radioshowlinks.com/display.aspx?id=72783

We also serve our schedules on RSS feeds. For example, this is the RSS feed of "Popular Shows Live Now" ...
http://www.radioshowlinks.com/rss.aspx?id=11

There are many more. It's all free; no registration required. It also works on Pocket PCs such as IPAQ and streaming capable cell phones such as the Nokia 3650 as well as a SmartPhone. Please check it out and let us know what you think about it and any suggestions you may have for shows, or stations, that we should add to our Internet Radio guide.

> paper town got their own space in that paper?

You keep missing one point. Even in one-paper towns, the acquisition of this paper is still attached to the exchange of merchandise for consideration (the paper's sale price). And in this instance, it doesn't take a contrary view to use a newspaper to spread the word (and the paper may actually help in publishing a letter to the paper's editors) since all it takes is for the dissenter to hire a printer to publish that view to be distributed independent of the paper. This model is not possible in a broadcasting model.

Politics has gotten this way BECAUSE the FCC has left "bad enough alone". There's a psychological effect that comes from people who associate only with others holding similar views, where after a time everyone involved comes away with an even more emphatically-held view of those issues. It's called group polarisation. If you want politics to climb down from this precipice, then you should support the reintroduction of the Fairness Doctrine. And run the likes of FOX News out of Dodge, or fine them out of existence. It's their transgressions which have made a bad situation worse.

"Sound" open and being open are two different things. I've had this didact before, but the gist of it is that the channels that "sound" open are only to allow that channel to be allocated in other areas, which in the Class C area that Chicago is in may be far, far away. Putting an allocation on this "open" channel would result in interference to these far-flung operations, thus reducing their coverage area to less than what they're allocated to serve. Same goes for the pirate. If you look at a frequency search map, using the specified minimum distances to each conflicting allocation, you'll find that there is some apparent "white" areas as a result of the overlaps (or actually, the effort to make sure they don't overlap).

>> > Should the fairness doctrine apply in markets in which there are open
>> > frequencies and channels?

>> No, because a licensee should do their part to represent all divergent
> views.

> I'm not sure I understand. Are you saying the fairnss doctrine should not
> apply in those markets?

I am not. Open channels (assuming that there are any, which certainly isn't the case in Chicago) mean that there are only a few possible voices that might offer

diversity. But there's still a finite limit to how many voices there will be. This is different from printed matter or public oratory, where there is no self-limiting property in the exersize of one's free speech rights. With broadcasting, the existence of one station prevents the free speech rights of those other "potential" operations on the same channel, thus depriving these "others" of their free speech rights. Since the "others" don't have the opportunity, then neither should the operator of the facility which abridges the "others" of theirs.

>> Satellite spectrum is, by definition, not broadcast spectrum....it's just
>>a band that some operators choose to operate un-encrypted.

> have any effect on the viewer?

Doesn't matter. People pay for subscription services. They get what they pay for, and if they don't like what they're hearing, they can cancel. Broadcasting is different. You can get conventional radio using devices which are readily available, require no real skills to install or use, and cost at least an order of magnitude less to acquire. For those who have satellite receivers, after having made the effort, if they think it's the same, then it is for them. But that doesn't make it so.

> If the fairness doctrine is really a good idea, shouldn't it effect every
> station a consumer gets?

As above. Broadcasting is different. The spectrum occupied is granted, in trust, by the people of the United States. Broadcasters should be held accountable for serving all those people. Whether they like it or not.

> Just why is the fairness doctrine a good idea?

Because we've seen what happens when it's not in place.

> Covering the country is not the same as getting gross impressions.

Well, then, that's not exactly what I'd call a good investment, is it? Tell you what....pay me $500 to spread to the world what you have to say. I promise I'll tell at least 15 people a day about your message for a month. But I won't tell you how many people I'll tell, and those that I'll tell may have no means by which to acquire the service or goods you're selling, at that. Deal?

It's commonly not understood by non-engineers that a radio station (broadcasting or otherwise) causes interference over a much wider area than it provides service. This is especially true on AM where multiple signals on the same frequency mix together.

The new Chicago X-band station moved from downstate - Johnson City IIRC. A station on that frequency in Chicago would not have been allowed if WRLL had been operating downstate.

As for the seemingly-open FM frequency, that depends on the quality of one's receiver. I can ensure you my car radio (1998 Ford Escort) finds NO open FM channels anywhere along the Edens/Kennedy/Ryan/Skyway corridor. (and I'd be amazed if it found one open anywhere else in the Chicago city limits) The frequencies either side of WUSN (99.3, 99.7) *sound* open but that's because WUSN is running IBOC!

On the other hand, one could take that to extremes... my home receiver provides useful reception of several Memphis stations, 170 miles away. Should we prohibit any Nashville station from operating on a Memphis frequency?

The new LPTVs have (probably, I don't know the specific channels) become possible as a result of the FCC relaxing certain "taboo channel" regulations. They acknowledge a major improvement in the selectivity of UHF TV tuners since 1952. Many FM receivers haven't improved significantly in selectivity since the 1950s.

> Right. And viewers/listeners don't really make the distinction between
> cable and satellite and broadcasting anymore. If 90% of a person's TV

> have any effect on the viewer?

Y'know, this is a dilemna in light of the Commission's new decency push.

How does OTA broadcasting compete with TBS, HBO, XM, or Sirius? When the former industry is restricted by decency rules, while the latter isn't?

How does enforcing decency rules against OTA stations accomplish anything when most homes have content-unregulated premium channels?

When a growing number of cars have content-unregulated XM receivers? So little Johnny doesn't learn what a breast looks like from Janet Jackson on CBS. He'll figure it out the next night when he tunes past Showtime during a program that shows a whole lot more than Jackson did...

Cable TV channels use radio transmission (via satellite) to link their programming to your local cable system. XM and Sirius use radio transmission (again via satellite, and now also terrestrially) to deliver their programs to your radio.

IMHO the FCC has grounds to regulate both services on content if they chose to do so. IMHO they need to either do so, or lift content regulations on OTA.

Yeah, but isn't that largely a matter of definition and policy? As I understand, the FCC used to try to keep a 30 kHz spacing between stations in the same market, now they'll go for 20 kHz. In my opinion, there are already too damn many stations on the air, using my personal standard of maximum allowable interference. But if the FCC doesn't much care about more interference, they could pack more stations in.

Even if a broadcaster refuses to broadcast an opposing view on his station or stations, he is only restricting one outlet for the opposing speech. So what? The Soviet Union had an entirely controlled media. Every paper, every broadcaster was owned by one monopoly. Yet some version of the truth got around. Printed material from typewriters and photocopiers were handed around. Phone calls were made. The Soviet media lies increased cynicism, not indoctrination. Control of one station or one broadcast network would be even less persuasive, especially if other outlets for opposing viewpoints are available.

If people don't like what they hear on a broadcast, getting rid if it is even easier than canceling. They just tune out.

I'm not sure I catch the reason why the fairness doctrine is necessary with broadcast stations but not necessary with pay services. I don't think it has to be a jurisdictional thing, as some Congressmen have proposed extending decency standards to pay services and the internet.

Anyway, I can't think of any reason a satellite direct broadcast service must be a subscription service. If satellite technology gets cheap enough, the networks might well launch their own, advertiser supported satellites. It's also easy enough to imagine the satellite receivers would be easily affordable.

With cable systems, there's no practical distinction between cable channels and broadcast channels.

They do serve people, by entertaining them. That's what broadcasting is good at. Broadcasting is a poor educational media. People who want to actually learn something read about it. Or converse with someone knowledgeable. Or, best yet, do it. I suppose broadcasting could be whipped into a decent educational media with VCRs and tape recorders so people could go back and forth until they actually understand what's being discussed, but they hardly ever do. Broadcast information goes into the air for an ephemeral moment, and then it's gone. Guys like Limbaugh and Hannity are successful, not because they are informative, but because they're entertaining.

I suppose there are a few doofuses who think they are getting some sort of political education from the broadcast loudmouths who are putting on a show within the limitations of broadcast media.

I do live in a dense urban area, so some of the interference I'm
getting may be from various household appliances. It's very
intermittent.

And all the power lines in my immediate neighborhood are above ground,
including a power pole and lines about 30 feet from my back door.

But I'll stop worrying about BPL.

Thanks,
cworonow@ix.netcom.com

A landbased pirate radio ( Radio Dor ) station was raided today, and it's equipment confiscated. But for the first time, since the new pirate radio law came into force, the police recorded all the companies that advertised with the station before the raid took place.

A NIS2,000,000 ( $450,000 ) fine or a one year prison sentence can be handed down if found guilty.

Every week the RSGB produces a News Bulletin for Radio Amateurs and Short Wave listeners. They are read live on Sundays (usually) by a team of readers throughout the UK on HF, VHF and above. The text is available on the RSGB Site http://www.rsgb.org/ .

This service in Real Audio allows you to hear the news at any time and even to download the files for future use. Many countries including the US, Canada, South Africa, Australia and New Zealand as well as Europe and the UK take part or whole bulletins for retransmission on their own services.

For the last 3 years I have been reading these bulletins in Real Audio which has made them more widely heard than before. There have even been extracts on HCJB from Ecuador! Feel free to re-broadcast outside the UK, but as a courtesy please email to let us know at g4njh2@ntlworld.com

Bulletins had also been re-broadcast by UK Internet Gateway Operators over radio links but the RA have withdrawn permission (July2002) to review the licensing implications of this.

To mark Manx Radio's 40th birthday, a new book - "A Nation's Station" is soon to be published.

Manx Radio's been on quite a journey during four decades of broadcasting.

Its highly unusual position - as a public service broadcaster, which is also partly commercial, means the station's always been subject to intense scrutiny.

Author Derek Winterbottom says the book sheds light on Manx Radio's ups and downs .. and examines its fascinating, unique status.

Hear Audio File at http://www.manxradio.com/.

Not possible in broadcasting? There's no brokered stations anywhere?

Anyway, since there's more than one media to fight a disagreeable newspaper, an opponent might use a different media. Buy time on a radio or TV station. Start a letter writing campaign. Annoy people over the phone. Put up some billboards.

Actually, I think US politics is reverting to it's normal nastiness. The post WW2 political era was unusally calm, but that started falling apart in the sixties, and it took a big hit in the Watergate era. The trend has solidified in the last 20 years. We still may decline further. We haven't had a fistfight in Congress for a while.

>There's a

Ah, is that who the fairness doctrine is supposed to serve? People who associate only with others holding similiar views? Well, I was sure you didn't need the fairness doctrine in order to think straight, and I'm pretty sure I don't, either. I'm glad I have that question answered.

But aren't these just the sort of people who would follow their favorite propaganda outlets to cable or satellite radio when the fairness doctrine is reintroduced?

If the fairness doctrine serves American society, shouldn't it cover all media outlets?

>And run the likes of FOX News out of Dodge,

If there are any radcio listeners here in Kalamazoo listening.

Can someone tell me what the deal is with WNWN 98.5 broadcasting on 95.5 as well as it's regular frequency? I discovered this while searching the FM band this morning. I thought at first that it was the radio that I was using but when I turned on my large stereo system and punched in the duplicate frequency I found the same station on the big radio as well.

So what's the deal? Is it my radios or are they going to put a new station in the 95.5 spot?

TIA
Robert

It's a translator/booster to improve the 98.5 signal in the downtown
areas of Kalamazoo. I never had a problem hearing WNWN-FM in downtown
Kalamazoo in the car, but it might be necessary to help penetration into
some buildings.

There is no way that they could put a full power station on 95.5.

Charlie

Doesn't FOX also have a broadcast division, which affiliates pick up? Or is that Sinclair? I don't know, as I don't watch the Fox station here, which is owned by Sinclair. All I know is that what used to be a fairly decent newscast has now been taken over by the parent company's agenda, making the national segment of this newscast worthless.

n=100679575&formid=349&fac_num=145136

It's a new station, W238AL. The numbers in the call letters mean it's a
"translator" station, authorized to rebroadcast the signals of some
other station (in this case WNWN) but not to originate programs of its
own.

Apparently WNWN doesn't feel their 98.5 transmitter has a strong enough
signal in some parts of the Portage area.

October 29, 2004
Tim Luckhurst
The Times

Behind the deluge of tributes to John Peel lies a phenomenon not entirely explained by Peel's charm and talent. It was previously apparent when the Today programme presenter, Brian Redhead, died in 1993.

Both men were proof of the incomparable intimacy of radio broadcasting. Millions of Britons sincerely believe that they knew Redhead and Peel. That is because radio streams into their homes, cars and workplaces untrammelled by the requirement to sit before a screen. It is a companion that stays with us while we do other things. We adore its constant presence as well as its capacity to stimulate and inform.

Now this relationship is threatened. The Culture Secretary is considering switching off analogue radio. Driven by the same fiscal imperatives that have persuaded it to promote gambling, the Government wants to convert Britain to exclusively digital listening.

This should not be perceived, as manufacturers of radio sets want it to be, as a laudable commitment to modernity. Nor should the excellent sound quality and enhanced range of stations made available by digital audio broadcasting persuade us that the future of radio must be entirely digital.

As long wave survived the arrival of medium wave and medium wave lived through the birth of FM, analogue radio must continue alongside digital. If it does not, 150 million analogue sets will be rendered useless. The cheap technology that allows us to have a separate set in each room and to avoid retuning by keeping a dedicated receiver for each of our favourite channels will be made obsolete.

Digital radios will become less costly, but they will never be as cheap as basic trannies. Digital sets are too complex and expensive for traditional early adopters. There will not be digital radios in every room. It will be reduced to the "appointment to view" status that renders television less popular than radio.

Switching off analogue radio would be like murdering a friend. The average of 22 hours listening a week by British adults would fall and advertising revenues with it.

Let digital radio thrive, Secretary of State, but not by assassinating analogue. That will deprive us of new John Peels and provoke fury throughout the land.

(Tim Luckhurst is the author of This is Today, a Biography of the Today Programme)

Way too much on the reserve. Of course, that would be the case at any price, since you could buy good used audio equipment for much less than his reserve, and it would be built for the work. That console would be a bear to actually use. Even in the 40's sound boards were sloped for ease of operation. And he's running FOUR Hamiltons (he says he's got them set up so that they're synced)? Isn't 4-times-100mW something in excess of 100mW? The turntables reek, too. Russcos (well, Gates' knockoffs of them) went out when the last tube in the studio was tossed out...which even in the last stations to do so, would have been 20 years ago..

It's called a translator. W238AL to be exact.

>So what's the deal? Is it my radios or are they going to put a new station
>in the 95.5 spot?

They can't. W238AL can only rebroadcast a full power station. In this
case, it gives a better signal to the Kalamazoo area than the 98.5 main
station.

# 2768. How John Peel helped shape American musical taste.

Thursday, Oct. 28, 2004

On a memorial broadcast for John Peel-who died of a heart attack on Oct. 25 at the age of 65-BBC radio host Mary Anne Hobbs called him "the single most important man that global musical culture has ever seen." That may not be quite true. But the music world's overwhelming grief over the death of the BBC Radio 1 disc jockey suggests that Peel was right up there-remarkably, for someone who was not a musician himself. Scores of record-collecting geeks are convinced that if you just put them on the radio, they, too, would influence what everyone else listens to. But Peel actually did it-without seeming arrogant about his taste or knowledge-and he was usually three steps ahead of everyone else. Decades after he should, by rights, have become the comfortable old fogey whose persona he affected on air, he was still tracking down and championing the new and newer-than-new.

It's no surprise that the Brits who grew up listening to Peel's twice- or thrice-weekly shows have been filling message boards with their fond memories of him. What is surprising is that Americans are doing the same-far more than for the Californian garage-rock standard-bearer and rock historian Greg Shaw, who passed away Oct. 19. There could hardly be a lower-profile job in America than British radio announcer; most of those mourning Peel in the United States probably can't name two other BBC hosts. And, aside from a short-lived syndicated program in the early '90s, Peel hadn't appeared on American radio since he spent a few years in the States in the mid-'60s.

American music fans listened to him anyway-via the Internet broadcast of his BBC show and, before that, shortwave broadcasts of his BBC World Service program and tapes forwarded by kindly friends in the United Kingdom. We sought Peel's shows out because he seemed to know about all the good stuff before anybody else. He waved the flag for David Bowie, Nirvana, T. Rex, the Smiths, the Cure, and the White Stripes long before virtually anyone else had heard of them; Elton John, Black Sabbath, New Order, and hundreds of lesser-known bands tell stories about Peel giving them a hand at the beginning of their careers. Every Peel broadcast seemed to include a couple of homemade records that somebody had pressed in an edition of 400 copies, for which he'd carefully read out a mail-order address.

He was famously inept with mechanical equipment-one listener wrote in to DJ Steve Lamacq's Peel-memorial broadcast, asking him to play something at the wrong speed in tribute to John. (The fifth clip on this blog features Peel on the air last year turning down his own voice instead of a record.) And he could be dryly snarky about music he didn't like. A possibly apocryphal

story: Following George Michael and Aretha Franklin's performance of "I Knew You Were Waiting (For Me)" on the TV show Top of the Pops, Peel quipped, "You know, Aretha Franklin can make any old rubbish sound good, and I think she just has." Still, it's very like him that there's a compliment concealed inside that put-down.

DJing is, of course, an ephemeral art. But Peel got his name out beyond the BBC's transmitter range with the "Peel Sessions": four-song recordings made for his show at the BBC's studios in a single morning or afternoon. Until 1988, the British Musicians' Union had an agreement with the BBC that only a certain number of hours of commercial recordings could be broadcast each day, and all other music had to be specifically commissioned for the radio. Peel invited very raw, very promising artists to record for him; by the late '70s, a particularly good Peel session could instantly popularize a band. In the mid-'80s, the Strange Fruit label started issuing dozens of the best as EPs and albums and spread Peel's reputation overseas.

That reputation had developed in the late '70s, when Peel caught on to punk rock and induced virtually every good band from the scene to come by for a session or two. (Gang of Four recorded this scorching version of "At Home He's a Tourist" in July 1979.) Punk and post-punk became the core of Peel's show for many years and provided him with his all-time favorite band, Manchester's eccentric and prolific Fall, who recorded several dozen sessions for him over 26 years (here's "C 'N' C/Hassle Schmuk," from March 1981). Eventually, Peel's voice seemed like a natural part of the sound of post-punk. When the Monochrome Set compiled Volume, Contrast, Brilliance ..., a 1983 collection of their sessions and singles, they included snippets of Peel's on-air chatter about them.

But Peel carefully avoided becoming a relic of that historical moment: He was also an early adopter of hip-hop in the early '80s, electronic dance music in the early '90s, and the British grime scene in the last couple of years. Although he generally favored music from the U.K., when American indie rock blossomed in the early '90s, he glommed on to that, too; Pavement recorded a great Peel session (featuring "Circa 1762") the month their first album was released.

Even in his 60s, Peel had the instinct for novelty of a 17-year-old music fanatic-his undying fondness for late-'80s grind-core bands like Extreme Noise Terror and Napalm Death was something of a joke among his listeners, few of whom shared it. (This page includes an MP3 of Peel reading a listener's request to address the "disappointing lack of loud, noisy, three-second-long records that go bleeraugh! and then abruptly end.") He played Jamaican and African records he happened to like all the time, without much mind to their significance as "world music." And he had a knack for surprises: In early 1977, with punk busting out, he presented an exquisite session of unaccompanied traditional ballads by folk singer June Tabor (including this version of "Lord Bateman"). Peel was exactly what DJs should be and almost never are: an ideal Sherpa guide to the mountain of music. Nobody liked everything he played, but he was the rare listener who was immediately open to anything; as the range of pop music exploded over

the last 35 years, that made him the one DJ we could trust to make sense of it all.

ARRL
October 29, 2004

A digital broadcast signal on 3995 kHz has prompted some members of the amateur community to contact ARRL to say it's QRMing the top 10 kHz of 75 meters and asking what can be done about it. Not much, as it turns out. The signal, from Deutsche Welle in Germany, is legal since radio amateurs share that part of the band with broadcasters in Region 1 (which includes Europe). The international Radio Regulations do leave the door open to request that the station reduce power or change its antenna pattern, however.

"Digital shortwave will revolutionize cross-border broadcasts and will initiate a worldwide renaissance of radio," Deutsche Welle Director General Erik Bettermann said this month during a panel discussion at Munich Media Days.

Deutsche Welle plans to gradually shut down its analog shortwave transmissions, he said, as DRM receivers became more available globally--something not anticipated until late 2005.

Although the station has been broadcasting for some time on the same frequency in conventional AM, it's attracted more notice from hams since July, when it began testing using digital format--also referred to as "DRM," (Digital Radio Mondiale, French for "Digital Radio Worldwide"). Of course, the vagaries of propagation will be a big factor as to the amount of interference US hams experience at any given time.

Radio amateurs meanwhile have been experimenting with programs such as HamDream http://www.qslnet.de/member/hb9tlk/, a DRM program adapted for Amateur Radio use by HB9TLK. It enables digital voice and data transmissions using bandwidths on the order of 2.3 to 2.5 kHz.

Oct 29, 2004

The FCC today released the full BPL Report and Order (R&O) it adopted just two weeks ago. While extolling the purported benefits of broadband over power line technology, the 81-page document also declares the FCC's intention to "protect licensed services from harmful interference."

> (broadcasting or otherwise) causes interference over a much wider area
> than it provides service. This is especially true on AM where multiple
> signals on the same frequency mix together.

The open frequencies I mentioned aren't silent, but are a mish-mash of low power signals. They aren't useful in this area. A standard power transmitter would encroach on the coverage area of one or more of these stations. I'm sure there are cases in which a low power station could be allowed. The street gang FM pirate is an example of this. I don't live near where they were broadcasting, but I think I heard them. They were broadcasting rap, and I had no interest in listening. The nearest licensed station on that frequency is in LaSalle Illinois, or some such place. I doubt they have any listeners east of Aurora. There were no interference complaints.

>
> The new Chicago X-band station moved from downstate - Johnson City IIRC.
> A station on that frequency in Chicago would not have been allowed if
> WRLL had been operating downstate.

I live within 15 miles of WRLL, and it's almost unlistenable at night after they drop power to 1 kW. Skywave comes in from all over. A much larger number of daytimers could be worked out, however.

>
> As for the seemingly-open FM frequency, that depends on the quality of

> Should we prohibit any Nashville station from operating on a Memphis
> frequency?

That's the point. The allowable amount of interference isn't really a technical consideration. At one extreme, we could have a very small number of true clear channel stations. Or we could have super saturated radio markets in which the only clear reception would be within the shadow of the

station's antenna. Allowable interference is a political consideration, not a technical one. The government gives alot of weight to the opinions of the NAB on interference. There's closer station spacing, more stations, and more 24 hour operations and IBOC, all with NAB backing. The NAB didn't like the low power FM proposal, presumably on interference grounds, and we don't have it.

Scott Colothan
29/10/2004

A US radio station has allegedly bid in excess of £1million for John Peel's much reverred record collection.

The massive collection containing tens of thousands of records, and which the great man was famously forced to extend his house in Suffolk to store, was deemed "priceless" by Peel's manager Clive Selwood.

He told The Daily Mirror: "A US radio company has offered us over £1 million. The British Library are also interested."

He added: "There are tens of thousands of records. It's got all his annotations on it - three asterisks meant the record must be played."

Many people who have seen the collection were awe-struck by its sheer scale. Gaz from Supergrass told Radio 1 this week: "When I saw his record collection, it blew me away."

Despite all the speculation, it is not yet clear exactly what is going to happen to the collection.

As reported on Wednesday, Glastonbury organiser Michael Eavis announced he is to the name the new bands tent 'The John Peel Stage.'

Port Vila Presse Radio News - 29/10/04

By Radio Vanuatu
Posted Friday, October 29, 2004

Vt300,000 to the Vanuatu Broadcasting and Television Corporation (VBTC) for a lease line between Port Vila and Luganville so that the national radio may be received by the islands in the North. This agreement was signed yesterday morning between the Charge d'Affairs of the French Embassy Mr Bernard Sexe and VBTC General Manager Mr Jonas Cullwick.

Mr Cullwick said the lease of this line means that the signal of the national radio can be rebroadcast through Halo FM in Luganville. With the rebroadcast on Halo FM, the islands in the North will be able to receive the national radio.

He stated that although there is a problem with the shortwave transmitter, this is one of the means to improve broadcast to islands in the North especially. The VBTC GM said an agreement has already been sealed with TVL. The Board and Management for VBTC have expressed gratitude towards the French Ambassador Mr Jean Garbe and to Mr Sexe for the continued support by the French government. - Radio Vanuatu

For those not so much into his taste in music, there's a special edition
of John Peel's Saturday morning programme 'Home Truths', presented by
Roger McGough. It's on BBC Radio 4 at 9am BST (0800 GMT). Will be
available as streamed audio from www.bbc.co.uk/ either live, or any time
via the 'Listen Again' facility.

How much would it cost to replace 99% of vehicle radios with digital versions?

This government forced rush to digital can be seen in the BBC campaign running at the moment. They are pushing how excellent digital radio is without pointing out the defects.

Most of the channels are in mono. The bit rate is lower than it should be, meaning that there is more chance of the odd tree causing a complete drop out of signal. With digital the signal is either on or off, you don't get the fade away that you do with analogue meaning that if you are on the M6 in the lake district you are more likely to get no signal at all.

Some digital channels are only on at certain times of the day, meaning you cannot receive all the advertised number of channels all the time, a bit of a con really.

The government want the current analogue frequencies sold off to make more money for the Chancellor and you can bet none of this will be used to give subsidies to the elderly or house bound so they can purchase digital sets. After all the radio is maybe the only 'friend' a OAP might have if they are partially sighted or blind.

People go on about being able to get digital radio through freeview and sky digital, great, but you cant take your TV into the garden when you are doing some gardening.

This governments rush to sell of this country's prize assets (which I count analogue as one) has to be stopped.

>
I don't think you should get too concerned at this stage. There are no specific plans to end analogue, no dates announced. I think you can assume that the same principle will apply as with TV, that the analogue service will not be switched off until nearly everyone can get digital, which is certainly not the case at the moment. I spoke to someone at the BBC only last week, who said that FM would be with us for a long time to come.

Your suggestion that digital sound quality is 'excellent' might not might not attract universal approval in this group. You say that digital sets will never be as cheap as analogue but given the advance in electronics (look at the pace of development of computers and digital cameras for example) so they may well be as cheap in the distant future.

Scott

I think that's correct. We have a FOX station here, but I only tune it in for "The Simpsons". I don't watch much TV. I haven't turned mine on for over a month.

# 2784. Radio Hall of Fame Set To Induct 5 More Legends

Newsgroup: rec.radio.broadcasting
Date: 2004-10-30 16:28:24 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cm0ff8$g95$1@xuxa.iecc.com>
Source record: 3622

Corey Deitz,
29 October 2004

The Radio Hall of Fame will induct five radio legends: Bob Edwards, Larry Lujack, Dick Purtan, L. Lowry Mays and the late Walter Winchell during a gala celebration Saturday, November 6, at The Renaissance Hotel in Chicago.

"Our 2004 inductees represent radio's diverse talent spectrum," said Bruce DuMont, founder and president of the Museum of Broadcast Communications. "Each have made a lasting impact on radio and will be enshrined for future generations to enjoy, both in our new museum and online."

Glenn Beck of Premiere Radio Networks (PRN) will host the gala broadcast and PRN will produce and distribute the broadcast ceremony nationally. The event will be heard locally in Chicago at 9 p.m. CST, Saturday, November 6, on WLS-AM (890) and WGN-AM (720). Westwood One Network talk show host and 2003 Radio Hall of Fame inductee Jim Bohannon will return as the program's announcer.

More on the 2004 Radio Hall of Fame inductees:

Bob Edwards -- Network or Syndicated, Active
During 25 years as the anchor of National Public Radio's Morning Edition, Edwards has conducted nearly 20,000 interviews with statesmen, celebrities, and sports legends. Prior to becoming host of Morning Edition, this Louisville native was co-host of NPR's All Things Considered. Edwards joined XM Satellite Radio in October to launch The Bob Edwards Show.

Larry Lujack -- Local or Regional, Pioneer
This edgy rock jock shook up WLS/Chicago and rival WCFL/Chicago during much of his 30-year career. Lujack is best known for his sarcastic wit including the humorous "Animal Stories." In 2003, he came out of retirement and returned to Chicago's WRLL where he broadcasts an early morning talk show five days a week.

Dick Purtan -- Local or Regional, Active
The morning voice on Oldies 104.3 WOMC/Detroit, Purtan is a broadcaster known for his on-air commitment to professionalism and his off-air commitment to his community. He has been a mainstay of Motor City radio for 38 years.

L. Lowry Mays -- Executive
Chairman of the board and chief executive officer of Clear Channel Worldwide, Lowry formed Clear Channel Communications in 1972. Lowry transformed what appeared to be simply a radio business into an advertising company that continues to serve local communities and advertising customers. Clear Channel currently owns more than 1200 radio stations, 36 television

stations, 776,000 outdoor advertising displays and is the leading live entertainment company.

Walter Winchell -- Network or Syndicated, Pioneer
One of radio's most influential commentators in the 1930s and 1940s, Winchell pioneered modern celebrity journalism first with CBS and later on ABC. His hard-hitting commentaries, delivered in rapid-fire staccato fashion, resulted in one of the highest rated programs in radio history.

Inductees were selected through a national balloting process that included participation by radio executives, broadcast historians and members of The Radio Hall of Fame from coast to coast. The Radio Hall of Fame recognizes and showcases contemporary talent from today's diverse programming formats, as well as the pioneers who shaped the medium during its infancy. The Radio Hall of Fame web site is http://www.radiohof.org.

RESTRUCTURING: ARRL EC MEETS TO DISCUSS BANDWIDTH AND BPL

A draft of a petition to the FCC dealing with bandwidth regulation and the latest on the B-P-L front dominated a recent meeting of the ARRL Executive Committee held October 16 in Dallas, Texas. Amateur Radio Newsline's Bruce Tennant, K6PZW, takes an in-depth look at what was discussed:

--

At the Texas gathering, ARRL Executive Committee -- better known as the E C -- devoted much of its fall session to a discussion of comments received on the League's draft FCC petition seeking regulation of subbands by bandwidth rather than by emission mode. The E C also authorized the filing of a Petition for Reconsideration in response to the Broadband over Powerline Report and Order in ET Docket 04-37, which the FCC adopted October 14. But the E C acknowledges that the drafting and filing the petition must await release of the actual Report and Order, which should happen in a few weeks. It did however authorize ARRL General Counsel Chris Imlay, W3KD, to prepare to pursue other available remedies regarding procedural and substantive defects in the B-P-L proceeding.

Responding to a synopsis of the bandwidth petition and proposed rule changes posted on the ARRL Web site, several hundred League members and others in the ham radio community offered comments and suggestions. The good news says ARRL Chief Executive Officer David Sumner, K1ZZ, is that the

Executive Committee found considerable support for the concept of the petition. It also was happy to see some constructive suggestions to reduce both the impact of the changes on current amateur operations, as well as possible unintended consequences.

By way of background, earlier this year, the Executive Committee decided to make a synopsis and explanation of the petition available before filing it with the FCC. At the Dallas meeting, the E C agreed to submit several recommended amendments to the proposed rules changes to the ARRL Board of Directors for its consideration when they meet in January. These include such items as retention of rules permitting automatically controlled digital stations including packet and other digital modes in narrow H F subbands. The draft petition had proposed dropping these provisions.

Also in the digital domain the E C addressed a rule prohibiting so-called semi-automatic digital operation on frequencies below 28 MHz where phone is permitted. This addressed a concern that ''robot'' digital stations might take over the phone bands. And a segment for 3 kHz bandwidth with no phone emissions at 10.135 to 10.150 MHz to accommodate existing and planned digital operations was included.

Another item adopted was the deletion of the word "continuous" from the description of test transmissions authorized on most frequencies above 51 MHz. Lastly is simplification of proposed changes to Part 97.309 of the Commission rules. This, to clarify that FCC-licensed amateur stations may use any published digital code as long as other rules are observed.

The Leagues Dave Sumner emphasized that the recommendations address major issues raised to date but are not necessarily the last word on the draft petition.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The ARRL's bandwidth proposals take into account the League's prior ''Novice refarming'' petition to expand some High Frequency phone bands--included in the ''omnibus'' FCC Notice of Proposed Rule Making in WT Docket 04-140. (ARRL)

**

RESTRUCTURING: UK HAMS GET EXPANDED 40 METER PRIVILEGES

Hams in the U-K have been granted expanded privileges on the 40 meter band. Jeremy Boot, G4NJH, is in Nottingham, England, with more:

--

Ofcom and the Radio Society of Great Britain are pleased to announce that all necessary procedures required for early access to the 7.1 to 7.2MHz spectrum for all UK radio amateurs have been finalized and that access is allowed from 01.00 UTC on Sunday 31st October 2004. Early access is granted on a Secondary (non-interference) basis using a maximum of 26dBW (400 watts) PEP.

Notices of Variation for the U.K. Foundation, Intermediate and Full licenses have been published on the Ofcom website at http://tinyurl.com/4tuud. It is recommended that for the time being only voice and Morse code modes are used between 7.1 and 7.2MHz. Band planning issues on MHz will be kept under regular review and will be dependent on the number of administrations granting early access to this band prior to full Primary access on 29th March 2009.

Jeremy Boot, G4NJH.

--

Thanks Jeremy. (GB2RS)

**

RESTRUCTURING: AUSTRALIA LOOKS AR VOIP RULES

The Australian Communications Authority -- the A-C-A -- says that it is reviewing telecommunications regulations to cover fast-emerging voice over Internet protocol services. In a discussion paper released about a week and a half ago, the A-C-A says that it aims to identify any regulatory challenges resulting from the increased availability of VoIP services and recommend to the government how those challenges might be met. What affect any changes might have to ham radio VoIP interconnects in Australia is to early to assess at this time. (WIA News)

**

THE FUTURE: SCIENTISTS PREDICT EARLY SOLAR MINIMUM

And some possible god news for hams tired of the rather poor High Frequency band conditions these days. It comes from the GB2RS News Service which says that American physicist David Hathaway believes that the next solar minimum could arrive sooner than previously predicted.

GB2RS News quotes on an article on the 'Science at NASA' website. It predicts that the next solar minimum could occur in late 2006. That's about a year earlier than previously thought

Dr. Hathaway bases his prediction on data from the last eight solar cycles, which show that solar minimum follows the first sunspot-free day on the sun by 34 months. In this solar cycle, the first spotless day was on 28th January this year and more recently, on 11th and 12th October, there were two more spotless days.

Hathaway goes on to state that the next solar maximum might also come early. He is quoted as saying that solar activity intensifies rapidly after solar minimum. That in recent cycles, the Solar Max has followed Solar Minimum by just four years. If that is the case, the next solar maximum could be not all that far away in 2010 and a Solar Max is good news for D-Xing. (GB2RS)

**

ENFORCEMENT: CB AMP SALE BRINGS $7000 FINE

A North Jackson, Ohio equipment retailer has been dinged with a heavy fine. This for allegedly selling those illegal 11 meter amplifiers that the C-B crowd calls footwarmers.

The noted violations involve Paladen Communications sale of external Citizens Band radio frequency power amplifiers. In it's October 21st Forfeiture Order the FCC alleges that Paladen, which does business as the CB Shop, did willfully and repeatedly violate Section 302(b) of the Communications Act of 1934 and Sections 2.815(b) and 2.815(c) of the Commission's Rules by making these units available to the general public.

Paladen was issued the $7,000 fine back on May 27th. The FCC says the company never responded to the notice. Its now been given 30 days to pay or face collection proceedings. (FCC)

**

ENFORCEMENT: CB OPERATOR FINED $10,000 FOR UNLICENSED OPERATION

And using an illegal C-B amplifier will cost a Washington state operator some really big bucks. This as the FCC fines Robert A. Spiry of Tacoma 10,000 for what the FCC say was operating a radio station without Commission authorization. Amateur Radio Newsline's Norm Seeley, KI7UP, has the details:

--

In its letter to Robert A. Spiry, the FCC claims that it found the amplifier as part of a follow-up investigation. This, after receiving numerous complaints from Spiry's neighbors.

On March 13th, April 2nd, October 29th and November 5th of 2002, agents from the Commission's Seattle, Washington Field Office concluded that the interference resulted from 11 meter transmissions originating from Spiry's residence and from his mobile station in his vehicle. During station inspections conducted on April 2nd and November 5th, 2002, the Seattle Office agents determined that Spiry was operating transmitters that were not FCC certified and that he was operating with a linear amplifier attached to his CB radio transmitter.

Spiry was advised that his use of unauthorized and non-certified equipment voided his blanket authority to operate his CB station. Nevertheless, the FCC says that he continued to operate the unauthorized equipment at the expense of his blanket authorization to operate his CB radio station.

On December 30th, 2002, the Seattle Office issued a Notice of Apparent Liability for Monetary Forfeiture in the amount of $10,000 to Spiry. In other words, a $10,000 fine.

In his January 15, 2003 response Spiry did not dispute the facts that lead to the fine. Instead he stated that he had ceased CB radio transmissions and had obtained an amateur radio license. The FCC database lists him as holding a Technician class license with the call sign KD7TRB. He also claimed to have removed his CB radio antenna and asserted that he was unaware that the amount of the forfeiture could be so high. He told the FCC that he was unable to pay that amount.

But in affirming the fine the FCC refers Spiry to Section 301 of the Communications Act. It says that no person shall use or operate any apparatus for the transmission of energy or communications or signals by radio within the United States without a proper license. The FCC says that Spiry's

2002 operation of his CB radio station with transmitters that were not FCC certified and use of a linear amplifier constitutes repeated violations. It also notes that his taking down the C-B antenna and getting a ham radio ticket are not sufficient actions to negate the punishment for the original offenses.

The FCC says that Robert Spiry has not provided it with adequate financial information from which to determine his ability to pay the forfeiture. Based on this lack of information cancellation or reduction of the $10,000 fine is not warranted and that it stands as is.

For the Amateur Radio Newsline, Norm Seeley, KI7UP, Scottsdale, Arizona.

--

Spiry was given the usual 30 days to pay. If he fails to do so the FCC says that the matter may be turned over to the Department of Justice for further action. (FCC)

**

ENFORCEMENT: BROADCASTER FINED

The FCC has also issued an $8000 monetary forfeiture to Crown Communication, Inc. Cowner is the owner of an antenna structure in Hobbs, New Mexico. The FCC says that the fine is for willful and repeated violation of Section 17.50 of the Commission's Rules involving Crown's failure to maintain good visibility of the tower. The situation dates back to August 13, 2002, when an agent from the Denver Office inspected antenna structure and observed that unpainted cables attached to it precluded good visibility . (FCC)

**

ENFORCEMENT: NO LICENSE - STAY OFF THE AIR

The FCC has warned an unlicensed operator to stay off the air or face some heavy consequences. This, in a September 30th letter to Travis Lee Dameron of Stuarts Draft, Virginia.

In its warning to Dameron the FCC says that it has information indicating that he has been operating radio equipment without a license on the Two Meter Amateur Radio Band. It tells him that transmitting without a license is a violation of Section 301 of the Communications Act and will subject him to fine or imprisonment, as well as seizure of any non-certified radio transmitting equipment he may have in his possession.

Dameron was also requested to call the FCC's Riley Hollingsworth to discuss the matter. If Dameron fails to stay off the air, the fine he could face would range from $7,500 to $10,000. (FCC)

**

RADIO RULES: FRAUDULENT STATION APPLICATIONS FILED WITH FCC

Bob Gonsett's CGC Communicator reports that a number of fraudulent Form 301 applications have been filed with the FCC this month. CGC says that the agency has even accepted for filing a number of these fake applications, and has assigned them file numbers.

One application in question was for a conventional, non-grandfathered Class B FM station. The petitioner was asking for a transmitter power level of 105 kilowatts E-R-P. This, in a Class B zone where only 50 kilowatts is allowed without a waiver request. And says CGC, there was no waiver request.

CGC adds that it appears as if the Commission is not screening these incoming Form 301 applications. This, even when there are blatant defects in some. (CGC)

**

NAMES IN THE NEWS: MOLLY SCHREIBER DEPARTS AES

Some names in the news. First is Molly Schreiber of Amateur Electronic Supply graphic design and marketing department who has announced her departure after 7 years with the company. The reason. Molly says she is moving to what she calls the lovely west coast adding that she will miss everyone she has dealt with during her tenure at A-E-S. October 29th was her last day with the company. (Via E-Mail)

**

NAMES IN THE NEWS: W1BKR INDUCTED INTO BROADCASTING AD CABLE HALL OF FAME

And congratulations to Bill Baker, W1BKR, on his election into the Broadcasting & Cable Hall of Fame. Bill is the chief executive of New York Public Television, which includes WNET Thirteen which is New York's flagship public television station.

Bill Baker has been head of New York Public Television since 1987. During his tenure WNET has grown and prospered, creating new program standards such as Charlie Rose, Wide Angle, Religion and Ethics NewsWeekly, and the children's math mystery series Cyberchase. Baker also established the

station's Educational Resources Center, which has become America's most prolific teacher trainer in multi-media techniques, and developed its first cable channel known as MetroArts Thirteen.

Ham radio wise, W1BKR was a co-producer of the ARRL video Amateur Radio Today and his article titled Amateur Radio is Part of New Media Task Force appeared in the May issue of QST. The induction ceremony honoring W1BKR will take place on Monday, November 8th at the Waldorf Astoria Hotel in New York City. (Adapted from Shoptalk)

**

NAMES IN THE NEWS: N4MC "VANITY HQ" WEBSITE GOING AWAY

Also, Michael Carroll, N4MC, has announced that as of Thursday, October 21st he is no longer supporting the Vanity H Q website. Vanity H Q was, and for the moment still is, a point in cyberspace where you can go to research availability of United States vanity call availability or simply find out the latest issued.

According to a posting at the site, at some point in the near future the www.vanityhq.com domain will itself become inactive. N4MC says that this is not an action based upon lack of funding. Rather, its because of a shift in his personal priorities. (K2GW)

**

HAM RADIO INDUSTRY NEWS: NEW QRZ CD-ROM AVAILABLE

The 24th edition of the Q-R-Zed C-D ROM Ham Radio Callsign Database is about ready to start shipping. The disk contains the same 1.2 million callsigns found on the QRZ.com on-line database and you have the option of reading them from the DC ROM or installing them on your hard disk for lightning fast access. For ordering and shipping information simply point your web browser to www.qrz.com and click on the photo icon that says "New Q-R-Zed CD ROM" (QRZ)

THE ARNEWSLINE SUPPORT FUND REPORT

Now with some good news here's Amateur Radio Newsline's Support Fund Administrator, Andy Jarema, N6TCQ.

--

In the month of August we heard from monthly contributor Joseph Bartzi, Jr, KC8DKF of Columbus, OH; From Indiana, the Huntington County Amateur Radio Society, K9HC: The Southwest Michigan Amateur Radio Team in Portage, K8KZO: Dean Carothers from the W4HPL repeater in Cookville, TN; Johnny Wallace, K5POP of San Antonio, TX; Albert Toering, N6TEZ of Anza, CA; Monthly contributor William Walters, WA2IBM, of San Jose; Monthly contributor Scott Hensley of the Area Communications Team, also in San Jose; Harold Hackman, W6HVH of Riverside, Brad Berryhill, WA6JJB of Anaheim Hills, The Westside ARC of Marina Del Rey and the Catalina Amateur Repeater Association, AA6DP.

A big thank you to everyone. Through your help we've been able to take care of all of the Young Ham of the Year award expenses, but of course, the newscasts go on. A reminder that Newsline is a 501c 3 California non-profit corporation. Information on how to support us is on our website at www.arnewsline.org. That address will be repeated at the end of the newscast.

I'm Andy Jarema, N6TCQ.

--

Thank you Andy. (ARNewsline(tm) Support Fund)

**

ON THE NET: JUNO FOLLOW-UP

An update now to our recent story on Internet provider Juno cutting out most of its free services using off-line mail handling software. And it comes thanks to some really intensive digging by one of our listeners who happens to be a Juno subscriber.

After hearing our story, John Vander Stel, WH6LY, of Grand Rapids, Michigan, took it upon himself to find out more. He says that contrary to our original story free account users will not have to go through another ISP to access their Juno E-mail after December 1st. He says that this was only made clear to him by digging into the F-A-Q about this change and then calling back to talk to another Juno phone rep. He

says that the even the first one he spoke with was not well versed in this change and provided improper information.

But all of John's work paid off for those of you who use Juno. The good news is that Juno access software will still allow the free account user to access the Internet and go to the Juno Webmail site to access their E-mail on-line. However, the time using that connection will be counted against their 10 free hours of connect time.

We have often said that you are all an important part of the Amateur Radio Newsline team. Our sincere thanks to John Vander Stel, WH6LY, who proves this once again. (WH6LY)

**

EMERGING TECHNOLOGY: WORLDS LARGEST NANOTUBES

The University of California at Irvine announced what it calls a breakthrough engineering discovery that is expected to have supercomputer and health care applications. This, as researchers at the Henry Samueli School of Engineering said they have synthesized the world's longest electrically conducting nanotubes. Nanotubes that are ten times longer than those previously created.

For those not aware, a nanotube is a memory unit made from carbon and consists of a graphite sheet seamlessly wrapped into a cylinder only a few nanometers wide. A nanometer is one billionth of a meter or about the size of 10 atoms strung together. The scientists who made them say that this discovery may lead to the development of extremely strong, lightweight materials and ultra dense nano-memory arrays for extremely powerful computers, ultra low-loss power transmission lines, and nano-biosensors for use in health care applications. (Science OnLine)

**

HAM RADIO IN SPACE: ISS HAM STATION TEMPORARILY QRT

Ken Ransom, N5HVO confirms that the ham radio station on board the International Space Station is back on thr air in packet mode. It had been off for several days without explanation but on Wednesday, October 19th, Astronaut Leroy Chow, KE5BRW, was able to check on the radio first thing today and resolved a minor setting discrepancy. Information on its operation is on-line at www.ariss.net and www.issfanclub.com. (M5HVO)

**

WORLDBEAT: FIRST STORE AND FORWARD IN UK

Turning to he internatioal desk, word from the United Kingdom that its first unattended 'store and forward' single frequency voice relay has become operationl. It as switched on at 13.30 UTC on Saturday October 16th on 70.4375 MHz in he Europen 4 meter band. Its call sign is M-B-7-F-M and it has a maximum 'store' time of 120 seconds. The installation is located in the Chiltern Hills with 10dBW Effective Radiated Power from a dipole antenna 32 meters above ground. (GB2RS)

**

WORLDBEAT: HAM RADIO SAILING THE ANTARCTIC

Call this one ham radio across the Antarctic. It started back on September 14th, when the famed yacht "Apostol Andrey" started out to circumnavigate the area while carrying an operational ham radio station.

During the trip the yacht will travel around the shores of the Antarctica without going further to the North beyond the 60th parallel which is the border of the Antarctic region in accordance with the International Agreement. The crew will try to establish a record for penetrating sailing yachts crossing the 70th parallel of the south latitude.

And for ham radio here's the best part. The skipper of the "Apostol Andrey" is Nikolay Andrey, R3AL. He plans to be on the air from the Antarctic area starting this December and continuing through March of 2005. Andrey has the QSL cards already printed for this expedition and the ship also has an official Russian postmark onboard and a special postal stationary envelope for this expedition.

For details on the World-Wide Antarctic Program and the expedition, go to the World-Wide-Web. The spot is in cyberspace at www.ddxc.net/wap (Via E-mail)

**

DX

In D-X, word that VA6JWT is now in Somaliland. He says that he expects to be there for at least six months and plans to operate as 6O0JT. (RSGB)

And F5PSA is in Cameroon until February of 2006. He is operating as TJ3SL in his spare time. (OPDX)

Lastly, G4JAG, is now active from Thailand as HS0ZFP. Chris can be found on 20 meters most evenings and says the best time for contacts back home to the U-K is around 18.00 UTC. For all of these stations, QSL as directed on the air. (RSGB)

**

THAT FINAL ITEM: HAM RADIO HISTORY - A ZL MILESTONE QSO

And finally this week, a bit of history from right here, down-under. Its the story of the first ever two-way radio communication between New Zealand and England made on the 18th of October 1924 by Frank Bell of Shag Valley Station, Otago.

Back then, Frank held the callsign Z4AA and on that date, using some rather primitive home-brew ham radio equipment, he made contact with Cecil Goyder, G2SZ at the Mill Hill school in London. The CW QSO lasted for about 1 hour and dealt mainly with issues of signal quality. It was also the start of the first scheduled contact -- or sked -- between hams in the two nations. For several nights after the historic contact the two radio amateurs kept in touch.

Further details of the activities leading to the historic QSO can be found on pages 40-41 of the NZART publication Ham Shacks, Brass Pounders & Rag chewers, A History of amateur Radio in New Zealand. Detailed information on the actual QSO, complete with a transcript, can be found on the web pages of the Otago, Branch 30 of NZART. To read them, just point your browser to www.qsl.net/zl4aa/ and follow the index for more. (NZART News)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). No, "overwhelming grief" is another example of the Bigley factor that
Boris Johnson so rightly pointed out. Peel was a boring unlistenable
nerd.

>Doesn't FOX also have a broadcast division, which affiliates pick up?<

The Fox O&O in Boston runs local news, but I've never seen a Fox news operation other than cable (and the Boston station occasionally picks up actualities from them, but not whole newscasts).

Is this, perhaps, to preempt the possibility of a LPFM?

The whole industry was off in the third quarter, which is why nearly all industry stocks are off about 30% to 50% from their 52-week highs. Viacom was bitten by the video rental division and radio, etc., etc. Fortunately, revenues are looking up once again and this may be temporary.

## 2791. FCC Provides Spectrum to allow AMT move from 1.7 GHz.

Newsgroup: rec.radio.broadcasting

Source record: 3635

This week's ARRL League Letter http://www2.arrl.org/arrlletter/04/1029/
says:

"The FCC says its action will make room available to shift federal
government aeronautical mobile flight test telemetry (AMT) operations from
the 1.7 GHz band to the 2.3 GHz band by extending the primary allocation
for AMT to include an additional 10 megahertz from 2385 to 2395 MHz.
"Making the additional spectrum available for non-federal AMT will
accommodate the higher data rates needed for non-federal flight testing,"
the FCC said."

If I read this correctly this allows the flight test users to move.
They were claimed to be the reason the US could NOT have Eureka.
Or am I wrong?

Y'know, I've wondered about that...

We have a couple of cases where Nashville stations have filed for translators at sites well within their city-grade contour and where no apparent terrain obstruction exists.

Are you a member of the 'music world'? If not, you don't really know.

OTOH if the second hand snippets I've come across from the Spectator article are accurate and representative I agree the author had a point. That doesn't alter the fact that the idea of Dracula sending Boris to Liverpool to do penance is pretty damned funny.

Then they're not "open". And adding another signal, even a low power one, in this space would then interfere with the otherwise serviceable coverage closer in to these stations.

>> The new Chicago X-band station moved from downstate - Johnson City IIRC.
>> A station on that frequency in Chicago would not have been allowed if
>> WRLL had been operating downstate.

> I live within 15 miles of WRLL, and it's almost unlistenable at night after
> they drop power to 1 kW. Skywave comes in from all over. A much larger
> number of daytimers could be worked out, however.

That doesn't make the area unserved by WRLL's nighttime pattern "open". A facility allowed to fill in this "unserved" area would interfere with the stations whose skywaves come in from all over. And the FCC no longer licenses daytimers, and all attempts to apply for one will be rejected on this criteria. As it is, the FCC is looking for daytimers below 1600 (and encourages, through policies in place) to move to the X-band, in order to clear out the congestion and permit more regional service by the full-time stations on those frequencies.

> That's the point. The allowable amount of interference isn't really a
> technical consideration. At one extreme, we could have a very small number
> of true clear channel stations. Or we could have super saturated radio
> markets in which the only clear reception would be within the shadow of the
> station's antenna. Allowable interference is a political consideration, not
> a technical one.

Actually, no. The interference standards provide for usable coverages to the limits of receivers (very few radios will provide a listenable output at 500uV, the current protection limit for nighttime service, which affords a 26dB signal to noise ratio, give-or-take). But protecting out to that limit means that for every 20dB increase

in signal strength for the desired station (by moving closer to the transmitter) also means at least a 20dB boost in the signal to noise ratio...thus, the rural-grade 5mV/m contour would be a listenable signal. Allowing increased interference (by raising the protected contour to, say, 2mV/m) means that a listenable signal would be obtained at the 20mVm contour....which is a metro-grade signal-strength. So, in the interest of expanding coverage, you'd actually be reducing it. For both the new, as well as the existing, stations.

All the details about how this is done can be found at
http://kauko.hallikainen.org/FCC/FccRules/2003/73/182/ and
http://kauko.hallikainen.org/FCC/FccRules/2003/73/37/

>> IMHO the FCC has grounds to regulate both services on content if they
>> chose to do so. IMHO they need to either do so, or lift content
>> regulations on OTA.

Maybe so....but, for the former proposal, would you want a situation where the FCC can delve into the private affairs of these operations? You know, the next step would be censoring telephone conversations, as the analogy holds. Subscription services, and other non-broadcasting licensees, are not public entities. Better that if the FCC feels obliged to limit what can be said on OTA, they feel that it's the only area where such pervue exists. While I'm not so keen to remove those restrictions on OTA, the Canadians and other democracies have no such limits (although there's some discretion in how often the ability to say anything is exploited) and they haven't come to the end of the world.

Not a nerd, although I used to sometimes wake up in the early hours
with the World Service on playing some unadulterated crap only to find
out is was Peely on his WS weekly show.
I never much went for his taste in music, but as a radio presenter he
was very good, especially some of the more surreal moments on 'Home
Truths.'

It is indeed.

But I've not yet heard any "overwhelming grief" about Peelie, even
from my devout muso friends. There's a near unanimous liking for the
guy, a sense of loss over the show, even a puzzled acceptance that
someone, somewhere must have liked Home Truths. Yet _nowhere_ have I
seen or heard anything remotely Bigleyesque, Dianaian or that would
offend Boris Johnson.

So what are HMG going to do with the medium and long wave bands?
The rest of Europe will presumably continue to use this space, so if
there is no use made of it, maybe we could get a resurgence of pirate
radio,, but if it is used, this will presumably blot out continental
stations, which amounts to censorship.... but of course this is our
control-freak government.

Interesting photos of the ship, studios and Mike West at
http://www.tv.aland.fi/

Although the ship is in Finland the website is in the Swedish as it is the
language of the area. I have just received the following translation:

"A quick translation gives this (it's in Swedish - Finnish is a completely
different thing).

During the last two weeks it has happened more within radio then during the
last two years. See this program and get updated! We have met Fredrik
Karlstr&#65533;m, Donny Isaksson and Eva Gyllander on the new Steel FM and RixFM
&#65533;land, that will start broadcasting on November 15. We have also been on the
islands radiostation, and met radioboss Astrid Olhagen. Lantr&#65533;det (I am not
sure about that title as it is a title used in Finland, not in Sweden. But
it is a political title) Roger Nordlund gives his view on the radio coverage
of the political powers.

On the radioship is the legendary Mike Spenser from Brooklyn, New York still
housed. Pirate Radio 603 Am is already known far outside the borders of
&#65533;land. Visit "Massmedialt" and see what Mike Spenser has to tell. You will
also meet ex colleague of Mike Spenser, DJ Mike West from Cyprus. In a cabin
on V&#65533;rd&#65533;, TV &#65533;land, as the first media, has met the man who might lead the
future mediumwavestation. The program is produced by Mats Granes&#65533;ter and
Kalle Wetterstr&#65533;m.

The rest is about when the program will be broadcast.

Sunday, October 31, 2004
OreganLive.com

You can climb in your car and drive from sea to shining sea in the good ol' USA, flip on the radio and hear the same old thing. Classic rock. Classic oldies. Classic country. And the ranters: right-wing, left-wing, preachers, sports nuts.

That's life in today's America after the takeover of the airwaves by media conglomerates, none of them based in Oregon. These money machines took advantage of changes in FCC rules in the 1980s that allowed corporations to control almost unlimited numbers of radio stations and make them all sound exactly the same.

But wait. There is diversity on the radio dial -- you just have to be willing to put up with lousy reception, intermittent broadcast hours and no fancy identification jingles. In fact, you may even have to get in your car and drive around to find the stations that don't sound like all the others.

They're called pirate stations, and they're all over the dial, all over the country. They're unlicensed by the FCC -- heck, the people who run them are being hunted by the FCC. Every year it shuts down 150 to 200 pirate stations, according to FCC spokesmen.

But thousands never are found. And new pirates pop up all the time. Right here in the Portland area, in the last few weeks, local radio buffs have picked up signals from frequencies not assigned to legally licensed stations. Some report what they hear on the pdxradio.com Web site. "I heard another pirate on 98.1," wrote one listener on Oct. 13. "It was coming in like gangbusters on I-205 until I got behind Mt. Scott."

The next day someone else reported, "I also heard two signals on FM only in downtown, 89.5 and 104.5 clear as a bell."

Just last Wednesday, someone else reported: "I heard yet another pirate station. This one was on 95.1 and didn't last very long. I picked it up near the Morrison Bridge."

Who's running these illegal radio stations? And why are they taking these chances?

"When I was 14 years old I had an electronics class, and I talked my teacher into letting me build an AM transmitter," Bob Ancheta says. "A tiny, one-watt, AM transmitter. It was purely illegal, but I still did it."

Today Bob Ancheta is a broadcast veteran with 35 years of professional experience, nearly all of it at Portland radio stations. But back in 1967 he was a freshman at Portland's Madison High School, and he already knew he wanted a career on the air. The trouble was, nobody wanted to hire a kid whose voice had just changed.

"I went to the Goodwill and bought a couple turntables. I got a piece of plywood, put a bunch of switches on it and created a console, added a microphone and put an antenna on top of my parents' house." Bob even rigged up a blinking red light to attach to his antenna, using a switch from his folks' Christmas lights and a power source from his train set. "I was just into every little detail of it all, I guess."

Bob crammed his equipment into a tiny, low-ceilinged room in his parents' attic. "I'd be up there all night broadcasting," he says. "I tuned in the transmitter anywhere on the AM dial where there wasn't a station."

Bob's one watt of power carried the signal about five blocks from the Ancheta home at Northeast 72nd and Prescott. His neighbors became his fans. "They'd come over, and I'd interview them. The neighborhood kids came up with my nickname, The Big B.A." He carried the nickname into his professional career.
After word spread at Madison High, teenagers would drive around Bob's neighborhood to listen to the Top 40 hits he spun. "You'd see cars parked out in front and know you had a listener."

His parents were patient to a point. Bob says he knew his station was illegal, but his parents didn't. They were upset about other aspects of the operation. "They hated it when the request line would ring at 2 in the morning," he says. He found a solution: "I'd unplug their phone from the wall in their room when they were sleeping."

Safety also was a concern. "I was always climbing on the roof, hammering things. My father would freak out over that. He thought I was going to burn the house down, with all the wiring around there. My mother would stand between us, saying 'Let him do it.' "

But his mother couldn't protect him from his father's protests when the radio signal interfered with his father's favorite TV program. "Frank Bonnema," Bob says, "was the wrestling guy on Channel 12. I had to turn the transmitter off so he could see his show."

Bob had friends who set up their own pirate stations. There were a lot of them. "One had an FM station in North Portland. He turned it on and they were listening to him at Mount Hood. Eventually the FCC caught him and shut him down and took all his equipment."

Wasn't Bob afraid his house would be raided? "When you're 14 years old, you're not thinking legal anything. You're thinking about having fun and breaking a few rules."

Bob never got caught. "But I did convince a lot of record companies I was a real radio station. I came up with stationery with fake call letters and sent requests out to hundreds of record companies. All of a sudden free

records started rolling in."

He still has those old 45s.

During his senior year in high school, Bob got his first job at a real radio station: KVAN. He shut down operation in his attic. Today he owns internetjock.com, an online voice-over business. But on Sunday nights he's in front of a microphone at KINK (102), hosting a blues show. Just like the old days, he's leaning into the microphone in the dead of the night, talking to people he can't see, playing music he loves.

There's a mystique to pirate radio stations. There's something appealing about a little guy trying to evade the big, bad government agency that's tracking him down with sophisticated electronic equipment.

Others talk about freedom-of-speech issues. Some say the airwaves should belong to the people, not wealthy corporations.

Of course, pirate stations can cause real problems for professional stations when they interfere with signals. But a lot of people in radio admit they got their start in their own attics or garages.

Who's running the pirate stations in Portland these days? You tell me. Listen closely; maybe you'll recognize a voice.

# 2803. Peel wanted to leave collection to nation

Newsgroup: rec.radio.broadcasting
Date: 2004-10-31 15:53:32 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cm31ps$3er$1@xuxa.iecc.com>
Source record: 3650
Cross-posted to: rec.radio.broadcasting,uk.radio

By Anthony Barnes, Arts and Media Correspondent
The Indepedent
31 October 2004

The broadcaster John Peel held discussions with the British Library about leaving his extraordinary record collection to the nation prior to his death last week.
The Radio 1 DJ, one of the most influential figures in music over the past four decades, amassed an unrivalled array of vinyl, CDs and tapes from around the world. His exhaustive collection, made up of many of the bands he loved such as the Fall, the Undertones and obscure African acts as well as early demos from bands that went on to make it big, ran to hundreds of thousands, all carefully stored in alphabetical order.

It would be the biggest and most important batch of material ever deposited with the national Sound Archive, which is held by the British Library. It is not clear what will happen to Peel's collection because his will has not yet been made public, if indeed he made one.
Peel's widow, Sheila, and other members of the family are still in Peru, where he died of a heart attack on Monday while on a working holiday. They are arranging the return of his body and are expected back in the UK early this week.

The archive's curator for popular music, Andy Linehan, visited the DJ at his home in Suffolk to examine the stack of music which had to be housed in a purpose-built extension owing to its size. "It's a fantastic collection. The nature of the material that was sent to him was the kind of stuff that we couldn't possibly get hold of," he said.

The Sound Archive, largely housed at the library in St Pancras, London, runs to around 2.5 million important recordings. Unlike the library of print publications, there is no legal requirement to deposit material, so it relies on donations and acquisitions.

Peel had been a tireless champion of new music from the days of mid-1960s psychedelia when he first began broadcasting in the UK as a pirate DJ. His enthusiasm helped many of the world's biggest bands find an audience, including Led Zeppelin, Nirvana and the White Stripes, during his 37 years at Radio 1.
His death at 65 left the music world in mourning and prompted glowing eulogies from those who are indebted to his patronage such as Elvis Costello, Feargal Sharkey and Jarvis Cocker. His friend Roger McGough yesterday presented a special edition of Home Truths, the Radio 4 series Peel created looking at the quirks and strains of family life. It featured some of the most memorable moments from the show.

Peel's long-time manager, Clive Selwood, confirmed the discussions with the British Library. "The idea certainly had favour with him, but we'll just have to see what happens. We would have to act in the best interests of the family. It should stay in England, but I've got to try to look after the interests of the family. This was his great asset. He was never a great saver of money."

This makes no sense: classical music and opera have been written since
the 1960s.

Originator of this newsgroup rec.radio.broadcasting
Founder of Airwaves.com
1956-1999

http://www.airwaves.com/

Welcome to the "new and hopefully improved" Airwaves.com.

This site has been created with two goals in mind:
To serve the broadcast community with broadcast related resources. This was Bill Pfeiffer's first priority. Bill always put his own opinions and agendas aside to make the Airwaves digests and website a truly free and open forum for broadcasters.

To keep the memory of Bill Pfeiffer alive. Bill Pfeiffer was in love with radio. He would drive from city to city, state to state looking at towers and airchecking stations. Bill had no children, but maybe through this website we can inspire another generation to marvel at radio and the possibilities that are created by a microphone and a tower.

There's no evidence the Chicago street gang FM pirate ever took one listener
away from any licensed station. Their signal was lost in the noiise a few
miles from their transmitter. The nearest licensed station was over 60
miles away. The FM pirate was playing rap, much of it was offensive, and
there were no complaints

>
> >> The new Chicago X-band station moved from downstate - Johnson City

whose
> skywaves come in from all over.

Of course not. But it does indicate that the FCC's interference standard is weak. If the FCC had a strong stand on interference, WRLL wouldn't exist as it is in either Chicago or Johnson City. Given the interference and power situation, it's practically a daytimer for most of it's listeners anyway.

> And the FCC no longer licenses daytimers, and all
> attempts to apply for one will be rejected on this criteria. As it is, the FCC is

The irony is the Xband is best suited to daytimers. Or true clear channel 24 hour operations. As it is, it's a mess at night.

>

What is the noise in the signal to noise factor? Do they take into account the cochannel interference, or they just assuming natural plus manmade backround noise? On nearly all AM nighttime frequencies, the cochannel interference is much stronger than the backround noise.

And there are very few FM frequencies which go down to the backround noise anymore.

>But protecting out to that limit means that for every 20dB increase

So, in the
> interest of expanding coverage, you'd actually be reducing it. For both
the new, as
> well as the existing, stations.

I think we're saying the same thing here. I said:

"Or we could have super saturated radio markets in which the only clear
reception would be within the shadow of the station's antenna."

Which sounds much like:

"Allowing increased interference (by raising the protected contour to, say,
2mV/m) means that a listenable signal would be obtained at the 20mVm
contour....which is a metro-grade signal-strength."

If the FCC really wanted to take a stronger stand on interference, it could
bring back it's older interference standards with wider frequency spacing
between stations in the same market, fewer AM nighttimers and fewer
stations overall.

If the FCC wanted to take a near absolutist stand on interference, they
could get rid of about 75% of the stations. The remaining stations would
have a much wider coverage area.

The FCC has neither a wide open stand on interference nor a absolutist stand
on interference. The current standard is a comprimise with elements of both
technology and politics. I belive politics is the bigger factor. The NAB
didn't like the old interference standards, so we have new standards. The
NAB and NPR didn't like the low power FM proposal, so they screamed
"interference!". I think there's plenty of room for low power 10 to 1000
watt FMers which would serve a community.

What about OTA subscription services? The used to be pay TV stations in areas which weren't wired up with cable.

Suppose IBOC AM flops, and Clear Channel converts their digital sidebands into a subscription service. Should those stations be allowed the same speech rights as satellite stations?

That *is* a disgraceful misrepresentation. If you can receive 56 DAB
stations then you surely must be able to receive the BBC and Digital One
multiplexes, which have the following mono stations on them:

BBC:

Radio 5
Radio 5 Sports Extra
BBC7
Asian Network
World Service

Digital One:

Oneword
talksport

That's 7 on 2 multiplexes and not including any on the other commercial
muxes that you must be able to receive if you can receive 56 stations.
Moreover, I very much doubt that you can receive 56 unique stations,
because if you can receive 56 stations then there's bound to be some
overlap between stations on local commercial multiplexes that you're not
in the area for. That is, how many versions of Kiss or The Storm etc can
you receive?

Doesn't matter. The method by which allocations are made is sound, proven and, while
imperfect in that it leaves white areas, is beholding to physical laws which require
this strategy. And (getting back to the original thread) getting a few more stations
on the air, under any condition, STILL does not permit the unbounded access to public
discourse that printed matter or the spoken word affords. And this is the reason for
the Fairness Doctrine....to assure that all reasonable voices are heard, which itself
provides a lot of latitude for freedom of speech and control of a licensee's own
business activities. (And with that, it's time to change the thread's subject).

> The Fairness Doctrine no longer exists. Reagan Administration.

If you'd been paying attention, ALL of us in this discussion are well aware of this. The argument (or, in this case, the question) was whether the FD, if in place, would have any affect on a viewer. I say yes. Frank, here, seems to think not. While I don't doubt that the FD did suppress a licensee's willingness to editorialise, I also think that the FD forced licensees to provide more balanced coverage, and can cite studies which conclude that the tenor of American political discourse shifted right after the FD was eliminated, as you note, by the Reagan FCC, abetted by right-wing so-called "think tanks" dedicated to proclaiming the conservative world view. The sorry part of all of this is that that claim that conservative ideals would be good for the country is a lie....how else can it be concluded that the Great Depression was made Great by the conservative values of the day, whereas the nation recovered to be the truly Great America through the instigation of socialist practices....everything from social security, to bank deposit insurance, to welfare and unemployment insurance.

As the conservative voice decries these programs, under the Fairness Doctrine it can be expected that the dissenting view MUST be discussed. As it stands now, any contrary view can be squelched by an O'Reillian "Shut Up!"

Many of them sound like pan-potted multi-mono as distinct from
genuine Blumlein stereo, if that's what you mean....

I think this is a pretty fair look at the competing claims of who's first:

a.. KDKA, Pittsburgh. Dr. Frank Conrad conducted the experimental work
that led to the establishment of KDKA, which made its formal debut on
November 2, 1920. Conrad was apparently among the first to use the term
"broadcast" to describe a radio service.
b.. WWJ, Detroit. The birthplace of broadcasting at WWJ was the Detroit
News. The station signed on the air August 20, 1920. It was the first
station to be operated by a newspaper, and the first commercial station to
broadcast regularly scheduled daily programs.
c.. KCBS, San Jose. Doc Herrold's station at San Jose (which eventually
became KCBS, San Francisco) began as an experimental operation with the
first documented transmissions occurring in 1909. It is said of Herrold that
he conceived the idea of broadcasting information and entertainment programs
to the public.
d.. WHA, the University of Wisconsin. 9XM-WHA achieved its first
successful transmission of voice and music in 1917 from the University of
Wisconsin campus in Madison. Pioneers in the establishment of the station
were Malcolm Hansen and Professor Earle Terry.
e.. WGY, Schnectady, NY. Operated by the General Electric Company, WGY
served as the test bed for many experiments in AM radio. Later efforts at
the facility were directed toward perfecting FM and television transmission.

The only Fox broadcast network program produced by Fox News at this time is "Fox News Sunday," the Sunday morning discussion show presently hosted by Chris Wallace. They did do a magazine show a couple of years that ran during the summer, but bombed in the ratings.

In addition, the Fox affiliates can buy a news service from Fox called "Fox News Edge," which repackages FNC and Fox affil coverage and offers live shots and custom coverage, similar to CNN's Newswatch service to broadcast stations (amusingly, some Fox affils continue to subscribe to CNN Newswatch). This also gives the stations the option of airing FNC for event or breaking coverage, once again like the CNN service.

Relax, Jerry....

I haven't seen anyone from RRB post into uk.media.* before and I don't know if there are a lot of flamewars over there, but we try to keep them to a minimum in RRB. If you guys want to start a flamewar, do it in other newsgroups, not in rec.radio.broadcasting (unless you want me to just start dropping your rrb posts).

Thanks
**Steve (rec.radio.broadcasting moderator)

Peel Unplugged

No one summed up John Peel better than Peel himself. While researching a book about Radio 1, Simon Garfield got to know the enormously influential DJ, who died last week. Here he offers some favourite tales - in Peel's own words

Sunday October 31, 2004
The Observer

Six years ago, I conducted a series of interviews with John Peel at Radio 1 and in the wine bar nearby. It wasn't difficult work: I turned on the tape-recorder and sat back, and after 10 minutes of mild suspicion and Rioja he hit a groove of sad and funny stories that brought tears to his eyes and mine, and all I could do was hope the batteries were fresh.

My memory of him is of a hugely sensitive man who cared very much about his music and his family, but also about how he was regarded by others. A magazine interview he had recently given had been very harsh on him, questioning whether he genuinely liked most of the records he played, and Peel had been terribly hurt by it. Looking back, it is significant how often in our conversations he considered his standing among his peers, and how much he relished his reputation as a pariah within the corporation. This was a role he found useful to foster, but in truth he was a shy and quiet man, prone to internalising his anger. And he was immensely loyal; he knew that he could only function in public service broadcasting, and in time he became its best advertisement.

I had first met him 18 years earlier, when he provided the narration for a radio documentary I had written. I told him how thrilled I was to hear him voice my script, and was astonished when he replied that he was genuinely happy to have the extra work. The extent of his talents was not fully exploited until Home Truths many years later. His impact on so many lives has not been fully measured until the past week.

His producer and great friend John Walters, who Peel was convinced would deliver the eulogy at his funeral but died three years before him, had warned me that many of Peel's stories were embellished, and he could prove that some of them couldn't possibly be true. Peel often told him that his grandfather used to get champagne on the National Health. Walters questioned him on this, and Peel always said, 'Yes, champagne.' Eventually, the story changed. 'Oh, I asked my mum, and I muddled it up,' Peel conceded one day. 'It wasn't champagne. It was morphine.'

Peel told me that his domestic life had recently been 'complicated'. His beloved wife Sheila had a made a good recovery from her brain haemorrhage, an event he found 'unimaginably terrifying', but her eyesight had deteriorated. In addition, her mother had recently died, and her father had moved in, and their children were in various stages of leaving home. Throughout these turmoils, there was one reliable comfort. He said that everything 'seems to be all right again when I come in and start mispronouncing the names of songs'.

Here are my own favourite Peel stories from those tapes.

On discovering Elvis:

'I'm a great believer in getting your priorities wrong, setting your sights low, so that you don't go through your whole life frustrated that you never became prime minister.

As a young lad, I used to listen to the American Forces Network in Europe, coming out of Stuttgart, and to Radio Luxembourg, and the signals were always satisfyingly feeble, so that you really felt you were participating in something quite exceptional. The record that genuinely changed my life was on Two-Way Family Favourites on the BBC. It may be hard now to understand how frustrating it was to listen to the radio then, because you could often sit and listen to a programme for several hours and not hear a single record that you liked. You'd listen to things like Housewives' Choice in the morning - based on the premise, shared by Radio 1 when it started, that housewives were some sort of subnormal minority group, as if perfectly sensible women would walk down the aisle but then return as gibbering idiots.

Two-Way Family Favourites was a show that reunited our boys overseas with their families back home on a Sunday lunchtime. One afternoon I heard them say, 'Lance Bombardier Higgins has requested the first record by the new American singing sensation Elvis Presley.' On came Elvis, and it sounds idiotic to say it now, but at the time 'Heartbreak Hotel' was just a revelation, like being transported immediately to another planet. The only thing that came close was when I heard Little Richard a few weeks later. It was genuinely frightening, as if something had been unleashed on the world that would never go back in the bottle. It turned out to be the case, wonderfully.

The quest for perfection:

'I lived in the States for seven years in the Sixties. In the days before we knew about sexism, me and a couple of mates used to follow the fortunes of a young woman who performed under the name of Chris Colt, the Girl with the 45s. We used to follow her from grisly strip joint to grisly strip joint. I was driving back from a particularly exhilarating performance in New Orleans, having left my friends down there, and I was crossing what they call the Piney Woods of East Texas, which cover an area the size of Belgium, as all big woods invariably do. I was driving along this long road in the middle of the night, and the moon was at the far end, so it was like driving along a silver ribbon, if you want to be poetic about it, and the hills were

rising and falling, and there was a small town before me, and on the radio came a record by Elmore James called 'Stranger Blues'. The first two lines were, 'I'm a stranger here/I just drove in your town.' I just thought it was a perfect conjuncture of time, place and music. You always hope in the course of doing a programme that somebody somewhere may experience a moment like that.'

Heroin in his hair:

'I used to run a record label, catastrophically unsuccessful, called Dandelion, named after a hamster - that's how things were in the late Sixties. We put out about 30 LPs using other people's money. There were one or two I quite like to listen to, and one or two atrocities. Stackwaddy were fantastic. They had an album called Bugger Off , which Annie Nightingale used to play a lot. They were punks before there were punks - these very primitive lads from Manchester who played a rather violent and inaccurate r'n'b. Once we got a person over from the States to see a whole load of Dandelion bands at a college in London. We made the mistake of putting Stackwaddy on first. The singer was a deserter from the army, and wore this improbable wig all the time. They turned the treble up on all their equipment, so it was like listening to a kind of buzzsaw. The singer was very drunk, and the first thing he did at the start of the gig was just walk to the edge of the stage and piss on the students.

When Radio 1 started, it was generally regarded as rather unhealthy for presenters to show any interest in music, as it was believed this would lay us open to unscrupulous promotions people offering fast cars and women. Of course these things never happened, but you did have to keep your interest in music very much to yourself. In earlier days there were times when senior management at Radio 1 seemed to be rather surprised that I walked upright and used knives and forks. I never saw my programmes as all that radical - more an alternative to what was on at other times of the day. But at one time I was regarded within the corridors of the BBC as being the Baader-Meinhof Gang of British broadcasting, and treated with a certain amount of terror.

It used to be that we had a controller, name of Muggeridge, who was joint controller of Radio 1 and 2, quite a good idea. When the BBC was looking for a man to do this job, they quite naturally chose someone who until that time had been head of the Chinese section of the BBC World Service. Once he had got the job he interviewed various DJs one after another, and I was last in. I think he thought I would do something unpredictable and startling, like rub heroin into the roots of his hair. He was sitting at his enormous desk, a sort of Dr Strangelove position. At some point in the conversation I mentioned public schools, and he brightened up a little at this idea, as if at some stage in my life I had actually met somebody who had been to a public school.

I said, 'Actually, I went to one myself.'

He went, 'Extraordinary! Which one?' He was assuming it was some minor public school somewhere on the south coast. I said, 'Shrewsbury.' He said,

'Good heavens!' At this stage he was getting quite elated. 'Which house were you in?' I told him and he said, 'How's old Brookie?'

It was clear that he thought, whatever he looks like, and whatever sort of unspeakable music he plays on the radio, he is still one of us. I think for a long time it was this factor that sustained me at the BBC.'

The bloody awful rubbish:

'At Radio 1 I try to keep myself to myself. I've always thought that avoiding office politics was a rather shrewd thing to do. I feel a bit like a person who lives in a cottage while a new estate is being built around him - so long as I can tend to my bees, I'm perfectly happy. I don't socialise that much with people here. I occasionally go to the pub or the wine bar with some of the women, because obviously they don't see me as a threat. I'm not likely to try to get off with them.

I do still see the Radio 1 thing as being what I do. Radio 4 is still seen as being the senior service, so when a couple of impeccably middle-class women call up and ask me to do a programme I'm always hugely flattered. You go off to very low-key places like Coventry to interview a family who have 19 children, and you think, 'Oh no', but then you meet them and you come away quite heartened by it all. Sometimes, if you're a regular reader of the newspapers and watch TV news programmes, you can whip yourself up into a froth of despair. So going out and finding that not everybody wants to kill you is kind of reassuring.

In 30 years there has genuinely never been an attempt by management to exert any control over my programmes, not beyond the occasional comment like, 'Ah, John, you still playing that bloody awful rubbish?' Someone from management did come down when I was playing a lot of hip hop, and then later when I was playing jungle, to inform me that I shouldn't be playing this music, because it was the music of the black criminal classes.

I think I was a handy safety valve for some time. If someone called up to complain about the safe and predictable nature of the station's playlist, someone could always tell them, 'You can always listen to John Peel. He plays strange discs.'

Tony Blackburn goes Barry Manilow:

'As a Radio 1 DJ, you were expected to do ludicrous things. We had these Radio 1 Fun Weeks, which usually consisted of travelling the country with a bunch of other DJs, and Noel Edmonds filling people's hotel rooms with chickens. In more enlightened days than ours you'd be burnt at the stake for doing that. People like Mike Read and DLT would often complain that they couldn't go anywhere without being recognised, but of course would go everywhere in a tartan suit carrying a guitar, so they would have attracted attention in a lunatic asylum.

But these things did have compensations. Perhaps the best moment for me took place in a multistorey hotel in Birmingham, in something called the Dickens Bar, lots of dark-wood booths full of people who no doubt travelled around

the country selling Dickens Bars to other hotels. Tony Blackburn got up with Paul Williams, a Radio 1 producer who used to play the piano tolerably well, and sang for about half an hour. There was massive indifference to his efforts, if not downright hostility, yet he went through the whole thing as if he was Barry Manilow at the Copacabana, as if everyone was absolutely adoring everything he did. He soared in my estimation after that. I thought, 'He's not such a tosser after all.'

A particularly viscous tackle:

'Occasionally, I'd be invited to these rather serious BBC events at TV Centre. I used to dread these things, but you had to go. Quite often I was the only person from Radio 1 who was invited, probably because I had been to public school. Once I found myself sitting across the table from the Two Ronnies and thinking, 'What do I say to these bastards?'

On another occasion, I had just recorded Desert Island Discs , so I went along with Sue Lawley. When we sat down I was at a table which included Nicholas Witchell, PD James and Jonathan Powell. I turned to the bloke sitting next to me and said, 'Hello, I'm John Peel.' And he said, 'I'm John Birt, and actually we were introduced five minutes ago outside.' You don't really recover from that. After about an hour of non-conversation, I said to him something about football, and he said, 'Didn't you break your wrist playing five-a-side in Holborn about 10 years ago?' I said, 'How did you know that?' He said, 'I was the bloke that tackled you.'

People say I 'discovered' or 'made' certain bands, but I never really think of it like that. I don't have a series of notches on my bedpost. They discovered themselves really, or some record company or manager did, and what I did was what I'm paid to do - play their records on the radio. I didn't discover The Undertones or Joy Division - they made magnificent records and I played them because I loved them. The fact that most other people were not playing them is the thing, but you'd have to ask them why that was. I think I helped listeners discover the bands, and if one more person has the chance to see Misty In Roots because they heard them on one of my shows, then I'm happy about that.

I don't tend to mix with bands. I'm too shy or respectful, and I don't think I would know what to say. I don't know very much about their history. Also, there's that thing about not wanting to lower my admiration of them, which I might do if I met them, and I feel they'd certainly have a lower impression of me.'

How to make the perfect radio show:

'A lot of people working [at Radio 1], young people, come up to me and make rather un-British little speeches about how they grew up listening to my programme, which is lovely to hear, and then you can think to yourself, 'Well, perhaps you wouldn't even be working here if it wasn't for me,' and I quite like the thought of that. But even the younger ones stopped listening to the programme at some stage. It seems that people listen to the programme for a while and then stop, and often listen to the programme later on in

their lives. I get letters from people who say, 'I hadn't listened to your programme for 12 years, and I was driving home the other night and heard something I thought was fantastic. I've listened every night since, and it was just how it used to be.'

Sometimes kids write in and say, 'I was listening to your programme in my bedroom the other night when I was doing my homework, and my mum came in and said, "What are you listening to?" I said, "John Peel," and she said, "Oh, I used to listen to him when I was your age."' It's nice being woven into people's lives in that way.

I always compare a good programme to surfing, not that I ever surf. When a programme goes well, you do feel you're riding along on the crest of something. You go out of the studio at the end and say, 'Wow, what a great programme!' and they say, 'Oh, it sounded like all the others to me.' But some nights you can come away feeling so desperate because you've made so many mistakes, and you go out and say, 'That was just a disaster.' And people say, 'Oh, it sounded just like all the others to me.'

I listen to bands' demo tapes almost exclusively in the car in the two-hour drive home. The ones I don't like get thrown on the floor in the passenger's area and by the end of the week they swill about. The ones I do like get thrown over my shoulder into the back seat, and then harvested at the end of the week. I know that I'm going to die trying to read the name of some band in the headlights of a car behind me, and then drive into a truck in front. People will say, 'Oh, this is the way he would have wanted to go.'

(A very interesting article by Trevor Dann, who was a producer, and later head of production, at Radio 1)

The Independent
29 October 2004

John Peel was a broadcasting legend. But his colleague Trevor Dann remembers him as a friend, a family man and a lifelong Liverpool supporter

It was like meeting the Pope, or at least the Maharishi. There we were, my friend Alan and I, two 15-year-olds queuing up to greet the great man, our hero, our mentor, our spiritual guide. As fervent listeners to the pirate Radio London, we'd learnt everything from John Peel.

We recorded The Beatles' Sergeant Pepper album when he played it all the way through without speaking. We'd gazed at the stars when he told us to, and thought good thoughts so we could change the world. He'd introduced us to Captain Beefheart, Jefferson Airplane and The Doors.

And yet here was the apotheosis of counterculture opening a summer garden-party at a girls' school in rural Derbyshire. He was in late Sixties uniform - the tie-dye T-shirt, cotton loons and plimsolls - while the school governors and the parents buzzed around in their suits and twinsets, clucking disapprovingly. Years later, he blinked in that beguiling way he had and told me why he'd gone there. "Well, Trevor, when you're on board a ship with nothing but blokes for company, an invitation to visit a girls' school is, er, quite irresistible."

He signed my copy of the programme for the f�te that day - "Love & peace, John Peel". I treasured it, and still do. But he was dismissive when I took it into Radio 1 a decade or so later. By then, I was a new radio producer and he was the venerable BBC institution who'd renounced hippiedom and embraced the energy and attitude of punk. "I used to talk a lot of bollocks in those days," he said.

John and I didn't get off to the best start at Radio 1. In my first week, I went up to the Broadcasting House continuity suite where he presented his late-night show and asked if I could watch. I didn't know that he hated what he called "broadcasting in a zoo". To make amends I got him a coffee and placed it on the desk as he leant to one side to cue up a record. As he straightened up his elbow knocked the coffee all over the faders, necessitating a rapid switch to the next studio.

Minutes later, his wife arrived. Cue another howler. "You must be Shirley," I ventured. They both laughed. I felt very uncomfortable. "No, this is Sheila," Peel said. But why had my simple mistake had such an effect? Some

days later, he explained that Shirley was the name of his first wife, an American woman who Peel always claimed had beaten him up and then pursued him to Britain, where he was taking refuge with Sheila.

One of the few consolations of the tragic news from Peru this week was that Sheila was there with him. He was devoted to the Pig, as he always called her, and he wore a silver ring with a pig on it. In fact, I think John defined himself more as parent and husband than a broadcaster. In spite of his acid tongue, he was a sentimental man who'd blub at the drop of a hat, especially at family successes.

It was one of the many contradictions in Peel's life that the man who sought out angry, urban music in some of the seedier inner-city clubs lived an idyllic rural life in an isolated Suffolk cottage. From the splendidly named Nan Trues Hole - truly John's bolt hole - no other building is visible. In recent years, the BBC allowed him to broadcast his show via an ISDN line from home. He began to sound like the religious leader he was to so many of us, letting fall his pearls of wisdom from a musical Eden.

In 1983, I produced "the Peel show", as it was always called, for a few months before leaving for television. I made one change. John Walters and Chris Lycett, my predecessors, had allowed Peel to choose all his own music, but they had retained the right to assemble the tracks into a running order. In some cases, this amounted to no more than finding two songs with the same word in the title and putting them together so John could do a DJ-style link. Which, of course, he never did. So I suggested that he should do the running order in future. He looked at me with the grateful eyes of a kid meeting Santa and thanked me as effusively as if I'd given him a new toy.

I loved the opening to his show in those days. In would come the low dum-da-dum of Grinderswitch's "Picking the Blues", and after the slide guitar figure we'd be treated to the usual litany of awkward and unpronounceable band names. Regular listeners may have noticed that, for pure devilment, John would sometimes trail a band who didn't exist - "... and the Flying Creamshots in session". He'd seen the phrase in a Dutch porno mag.

He loved Holland, and regularly hosted the Pink Pop Festival. He claimed that the Dutch liked him because his name translates as John Prick. Like many of John's anecdotes it may not have been strictly true, but somehow details like that never mattered. It was just a joy to listen to his fund of stories. Life had a knack of happening to John. He always cast himself as the unworldly ing&#65533;nue at large in a cruel and unforgiving world.

Also in 1983, Radio 1 was staging a week's programming from Liverpool and someone suggested that Peel and I should make an introductory show about his home city. Persuading him to depart from the safety of the studio was a nightmare, but once he'd agreed (with the condition that his daughter and her teenage Goth friend could accompany us), he created a magical programme.

>From the passenger seat of our hired car, he guided the two girls and me around the streets of Liverpool, pointing out the key landmarks of his early

life. "That's where I saw my first gig. Eddie Cochran wasn't it, oh no, it was the Obernkirchen Children's Choir singing 'Val deri, val dera'!" And: "There's the Royal Insurance where brother Frank works." And: "That's the train that takes the rich people to Heswall."

And thence to Anfield, home of his beloved Liverpool FC. He took me on the Kop - all standing and swaying in those days - and I recorded his thoughts and reactions to an FA Cup tie against unfancied Brighton. Liverpool famously lost that day, so I got nothing at all out of John except a few grunts, and nothing from the Kop characters apart from a wet trouser-leg thanks to the inebriated Scouser behind me who couldn't be bothered to fight his way to the gents.

The following morning we met Kenny Dalglish, Peel's absolute hero, for a pre-arranged interview. Dalglish gave the usual pat footballer's answers to some questions about the game, and Peel was still so depressed about the match that he couldn't bring himself to conduct a proper interview. In the end I had to ask the questions, and we dubbed in some commentary later.

That Merseyside expedition was also notable for the teenage scally John had found to talk to us about being young in Liverpool in the Eighties. We met on an estate in a pub that I thought was called The Chester, but turned out be The Jester. And we listened to tales of burglary, football violence and routine drug-use from a thoroughly engaging lad I thought no more of until I saw The Farm singing "All Together Now" on Top of the Pops. It was Peter Hooton, their lead singer. Once again, Peel the talent-spotter had been ahead of his time.

He liked to use a football metaphor when talking about his appetite for new music. Of course he was proud of Liverpool FC's championships and European Cups, but "I'm much more interested in what happens on Saturday". He found something life-affirming in the quest for novelty and the refusal to look back.

When I was producing his Radio 1 show, I asked him to play the occasional old record to help to introduce his young audience to some of the acts he had championed in the past. I argued that Smiths fans might be interested in Van Morrison or Tim Buckley if they were introduced to them by John Peel. But he would have none of it. The two hours of airtime he had every day were too precious to devote to anything other than the latest sounds from the streets, pubs and bedrooms, and from teenage Britain.

In the Eighties, I was asked to write a profile of John for a newspaper. He was a reluctant interviewee, but I managed to cobble together what I thought was a reasonable piece. When it appeared, though, he was cross with me for drawing attention to his love of driving. He didn't think it was a big part of his life, even though he spent hours at the wheel and refused to fly until only a few years ago.

I'd spent hours debating with him the fastest way to London from Suffolk. I was an advocate of the A10; he preferred the A505 right round Royston to the A1. For weeks, he would keep me informed of various time trials he'd done

using different routes, all proving that he was right in the first place. How silly that we should waste so much time on something so trivial, but that was John; once the bee was in the bonnet, it just kept buzzing.

The Peel/Walters office at Egton House, the old home of Radio 1, was a shambles, hung with Christmas cards from decades earlier and packed to the ceiling with tapes and vinyl. Walters was the untidiest man in the BBC, and would never have survived in the era of open-plan offices. Peel and their faithful secretary Sue (known as Brian, in a spiffing chaps' wheeze kind of way) kept on at him, but nothing changed.

So John had to sit on his record case or the floor because there was no room for a chair. This became even more ludicrous when John had one of his famous early evening naps. The door would closegently, and the greatest living DJ would snore through two hours, wrapped around a desk leg, a bin and a pile of NMEs.

When I arrived back at Radio 1 in 1995 as the head of production, with a brief to overhaul the music policy and the on-air sound of the station, Peel was as comfortable as I'd ever seen him with the BBC management. The pop'n'prattlers were on their way out, and the new controller, Matthew Bannister, had endeared himself to Peel by making all sorts of public statements about his support for new music. I remember Peel and Andy Kershaw talking about Bannister on the radio and saying: "Well, we're safe - one day Radio 1 will sound like our shows all day long."

But John's unease with management resurfaced when the axe started to fall on people he liked. He got quite angry with me about the departure of one producer he was particularly fond of, and he took on the mantle of a stubborn trade-union leader arguing, in effect, that all change at Radio 1 was a bad thing. Underneath that friendly grumpy-old-man exterior lurked a genuine grumpy old man.

When asked about his favourite record in the 1970s, he used to talk about Link Wray's dirty and foreboding guitar solo "Rumble" and T Rex's "Ride a White Swan". He delighted in the story that when Marc Bolan made No 1 for the first time, Peel had been driving in his car and had to pull over on to the hard shoulder as his eyes filled with tears.

But for many years his choice of best record ever was "Teenage Kicks" by The Undertones, I think because it reminded him of what music is there for. Once he'd kicked the somnambulism of the acid and dope years and rediscovered beer (he always credited The Faces for re-energising him in the early Seventies), he espoused music that celebrated youth and vigour.

John Peel won hundreds of awards. But he was a genuinely reluctant celebrity; he hated what fame did to people and he had no truck with the insincerity of showbiz hangers-on. In fact, I've no doubt that if he knew that I, or indeed anyone outside a close circle of family and friends, was writing about him, he'd be coming after me with a meat cleaver. I can hear him saying so.

I was in Berlin when I heard the shocking news of John's death. Even the teletext in my hotel room put the news on their front page, which gives some indication of his worldwide reputation. Since Tuesday morning when the news broke (although it had been embargoed until 2pm), I've received dozens of texts and e-mails from friends who've been touched by the great man. One came from an old friend I haven't seen in more than 20 years. "You told me so many funny, warm stories about John," she wrote, "that I felt I knew him a bit, too, and I was thrilled when he gave me a big smile and a good morning in Diss last April." John had that effect on people. He made you feel better.

He became a broadcasting icon because he had no artifice, no style, no shtick. What you got the across the table at an Indian restaurant was what you got on the radio: passion, honesty and an understated facility for language. Younger broadcasters described as the new John Peel have come and gone for 40 years, but the original was always the best.

# 2825. The Dread Broadcasting Corporation

Newsgroup: rec.radio.broadcasting
Date: 2004-11-01 15:25:02 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cm5kge$p7m$1@xuxa.iecc.com>

The Independent
01 November 2004

The Dread Broadcasting Corporation was set up towards the end of 1979, shortly after Margaret Thatcher came to power. While the population at large seemed to embrace the new capitalist mood, I recall that things remained pretty bleak for the average black Joe or Josephine. Their sense of exclusion was reinforced by the lack of black music on the radio: we were expected to make do with the prescribed "specialist" titbits (amounting to between two and five hours a week), even in the most densely populated ethnic areas.

One listener who was unwilling to accept the status quo was my brother Lepke, the founder of DBC, which marked a new concept in British radio - the dedicated black music station. Lepke took what he thought was his only course of action and built his own radio station after acquiring a medium-wave transmitter.

By use of a 60ft high mast in the back garden of his house in Neasden, north-west London, he broadcast shows that had been pre-recorded onto cassettes. Before long, DBC had transformed London radio, airing rarely heard calypso, rhythm & blues, reggae, hi life, soca, jazz and hip hop. These showcases were fronted by a sterling cast of presenters, including the singer/ songwriter Neneh Cherry, musician Gus Dada Africa, writer Lloyd Bradley and journalist Nick Coleman (now with The Independent).

Lepke's ambition was to bring about a shift that would allow more alternative stations to operate legally within the UK's broadcasting framework.

Another important consideration for my Jamaican-born brother was the black elder; he remembered life in the Caribbean and empathised with the sense of isolation the older generations felt. He envisioned a station that they could tune in to for news, features and music from Africa and the Caribbean.

Serial exclusion tends to cause the excluded to find alternative means of expression, as with the world's first so-called "pirate radio" station, Caroline, the infamous broadcasting vessel of the mid-Sixties. Loud and proud, Radio Caroline circumnavigated our green and pleasant island, beaming over decadent sounds of freedom and rock'n'roll. Quite why they were landed with the "pirate" moniker remains a mystery, as Caroline operated in international waters.

By mooring three miles outside of British jurisdiction they were not subject to British law. So if they weren't illegal, why did they do it? Necessity,

is the short answer. Georgie Fame's classic "Yeh, Yeh" - rejected by the BBC for being too "black" - was released by Caroline's founder, Ronan O'Rahilly. Unable to procure any airplay, he had turned in desperation to Radio Luxemburg. They simply showed him their packed, record company-booked play list - and then showed him the door. Before leaving, he declared: "I'll just have to start my own station, then." And he did, with Caroline, just as my brother did some 15 years later with DBC.

The creation of black alternative radio in 1979 can be compared to what happened in downtown Kingston, Jamaica, in the Fifties and early Sixties with the creation of the sound system culture. Barred from the uptown haunts, working-class entrepreneurs fashioned their own recreational spaces. Sound system owners such as Sir Coxone, Duke Reid and Prince Buster would "string up" on a piece of land - a lawn, say, or someone's yard - and let rip. Often called the dance hall, it was a place where ordinary Jamaicans could socialise.

During that time, many of the same people were lured to the UK by the promise of work and a good life in the Mother Country. On arrival, the "No Dogs, No Irish, No Blacks" signs that greeted them were a swift wake-up call. They soon realised that they faced slum housing, low wages, poor working conditions and social exclusion. Ever resourceful, they re-invented their outdoor shindigs as"blues dances". These soir&#65533;es were often held in two or three emptied rooms in an entrepreneurial household, or in an unused building that had been "captured" for the night. The host would sometimes charge a small gate fee, but the real money was made at the bar, selling curried goat, fried fish and booze.

Apart from the lucrative nature of the blues dance, it was also one of the few places where black people could meet in groups, as they used to back home. This high-decibel bonding, however, did not impress residents, local authorities or the police, who, armed with new powers, all but obliterated the dances by the late Eighties.

But the demise of the blues dance heralded a whole new method of social interaction: black radio. As well as DBC, other stations emerged, such as Horizon, Invicta, Kiss and PCRL in Birmingham, as well as newer models like Freek and Delight. Without them, key figures such as Soul II Soul, Trevor Nelson, Norman Jay, So Solid Crew, Ms Dynamite, Dizzee Rascal and countless others would not have been so easily ingested into the bowels of the mainstream.

DBC and its ilk served as a catalyst for changes in legislation, which in turn encouraged the emergence of licensed black music stations, from Choice and Jazz to Kiss (formerly an illegal broadcaster). More recently, the BBC has founded non-commercial versions in the form of the Asian Network and 1-Xtra. In my opinion, the Asian Network is one of the jewels in the BBC's digital radio crown, quite rightly designed to appeal to Asian audiences of all ages and backgrounds. I'm not sure if the same could be said for 1-Xtra, launched as "the home of new black music" in 2002 - and thereby, incredibly, ignoring two, maybe three generations. Earlier this year, 1-Xtra dropped the

"new black music" tag and began labelling its output as "street music". This is worrying at a time when two of the largest commercial stations, Kiss and Choice, have been absorbed by large, national media conglomerates. Neither is recognisable as the station it was set up to be.

And so we have a situation, 25 years after the founding of DBC, where we are almost back to square one. Later this month, the broadcasting regulator Ofcom will announce more community radio licences. Whether it's Access FM for the disabled or Caribbean Folk Gospel FM for aging, first-generation West Indians, air space is available. Ofcom views the introduction of licensed community stations as "a low-cost and legal alternative for people otherwise attracted to illegal 'pirate' broadcasting, some of whom claim to be meeting a local community need on a not-for-profit basis for local social gain." It's a good start; a series of small outfits, operating locally, is the way forward in the short term, and will ultimately provide greater opportunities at the entry level of broadcasting. But what's wrong with making money too? With DBC we were given no Government or other funding, but we still found ways to generate our own income legitimately.

There has been some progress since 1979: thankfully, there is more black music on the air and more black broadcasters are in work. But can we have a big, fat, commercial, money-making station that we can hold on to? Or at the very least allow the BBC version to do what it's supposed to say on the tin. Please?

('DBC: Rebel Radio' is released by Trojan Records; Miss P appears on BBC London Live 94.9FM, on Saturdays at 10pm)

Translator rules are weird. They can put up a 175 watt translator, but
not a 100 watt LPFM.

By Laura B. Withers
The Winchester Star
http://www.winchesterstar.com/TheWinchesterStar/041101/Area_radio.asp

But you won't find a lengthy phone bill in his possession. Stewart talks to friends all over the world another way - using radio waves.

In the clubhouse of the Shenandoah Valley Amateur Radio Club on Winchester's Grace Street, Stewart and his ham radio buddies talk to other amateur radio enthusiasts across the globe.

Shenandoah Valley Amateur Radio Club Vice President Sam Long stands under the ham radio antennas his club uses to broadcast to the world from its headquarters on Grace Street in Winchester.

They ask questions like, "What kind of radios do you have?" and "How's the weather over there?"

After a few conversations with a contact in Iraq or China, Stewart has a new friend.

"Everybody's on a level playing field," the Winchester native said. "It doesn't matter whether you're Iraqi, or British, or Russian, or Chinese, or American - everybody is on the same level."

Ham radios have been handed down through generations. The local club began in 1948 and since then, parents and grandparents have passed on the hobby to their children and grandchildren.

But the future of ham radio hasn't always been so bright.

Amateur radio clubs often face the threat of losing their radio frequencies to commercial ventures. As the demand for AM and FM radio grows, the amateurs feel the effects of dwindling broadcast space.

Cellular phone towers also are a big concern, Stewart said. The club rents land near U.S. 522 north of Winchester, along Route 654, and members have built radio towers that help them pick up clearer frequencies.

But when cellular phone companies, such as Cingular, buy the land, the club has to move its towers to another location. And the options are limited.

When they met last month, members of the Frederick County Planning Commission discussed placing stricter rules on where ham and commercial radio towers can be built.

Some county residents say the radio towers are an eyesore.

Commissioner Charles DeHaven said some towers used for commercial and ham purposes are built too close to property lines.

The Planning Commission has been supportive of ham radio in the past. But Stewart worries the commission needs to be reminded of ham radio's role as a public service.

In addition to the social aspect of the hobby, ham radio provides backup communication in emergency situations.

During this year's hurricanes in Florida, ham radio operators sent reports to local law enforcement and safety officials.

"Time and time again, it's been the only method of communication that has worked," said Tom Sullivan, a longtime Winchester resident and ham radio operator.

Commissioner Rick Ours said if radio towers required conditional-use permits, that would give the county a chance to examine where they are being constructed.

"I certainly don't want to discourage people who do ham radio, because I think they do a great service to the community," Ours said. "I think that in general, the county does need to have some control."

If the Planning Commission wishes to address the tower issue, DeHaven said, the public will have a chance to speak on behalf of ham radio.

Stewart said he would be happy to speak to the Planning Commission and share ham radio's benefits and services.

"It's a lifelong hobby because it's always changing," Stewart said. "It's a hobby that'll take you from cradle to grave."

Leakage happens in both directions. I think there will be no problem
using 2-80 Mhz near BPL systems. In fact, I recommend everyone set up
a kilowatt beacon on 10M as close as possible to them. I think the
problems will be for the poor sods trying to get the hopelessly
ill-designed system to work as much as anything else.

Some FM radio services in parts of the east of England have been affected after a transmitter caught fire.

The 580ft mast at Morborne, Peterborough, Cambs, caught fire on Saturday, collapsing onto transmitter buildings and neighbouring fields.

Radios 1,2, 3 and 4, BBC Radio Cambridgeshire, BBC digital radio and Classic FM were all affected, along with some mobile telephone reception.

Detectives think the fire may have been deliberate and appealed for witnesses.
Gary Martin of Cambs Police, said: "We have a number of theories and we're not resting on any particular one.

FM reception in parts of several counties has been affected

"But we need to know - was there anyone suspicious in the area or were there any bangs or fireworks or rockets flying through the air?

"Has anyone seen where the tower was ablaze - was it at the top of the tower, the middle or the bottom of the tower?"

Following the fire, an estimated 1.3m radio listeners were without an FM service.
Broadcasters are working to restore service and it is unclear how many areas are still affected.

The transmitter, which is owned by Crown Castle International, covers Cambs, and parts of Lincs, Northants, Leicestershire, Beds, Bucks and west Norfolk.

By Nick Farrell
Monday 01 November 2004

One of the world's oldest radio stations is shutting its doors in favour of a brand new multi-lingual website.

Swiss Radio International was founded in 1934. The short wave public radio station was seen as a neutral voice in the middle of Europe during World War II.
However, government funding for short wave broadcasts has plummeted since the fall of the Iron Curtain and stations are being forced to compete first with satellite television and now with the Internet.

The website, http://www.swissinfo.org/, is aimed primarily at providing news and features about Switzerland in nine languages. It registers about eight million hits a month, which is no small number.

http://www.rockininquad.com

September 15, 1972 - 10:15pm. KQIV in Lake Oswego, Oregon, signed on the air at 106.7 FM. Owner, Walter J. M. Kraus, Entrepreneur, puffed on his over-sized, custom-rolled cigar and waited for the money to pour in. That never happened.

As this site develops (we started on September 18, 2004) we will tell the story of KQIV in words, pictures and sound. KQ4, as it was called, was to be the "new wave" in Portland radio that would shake the market, leaving all other radio stations behind. Progressive album rock and "Quadraphonic" sound were the tools that would shape this radio revolution. Well, that was the plan, anyway. Like many great ideas, KQ4 fell far short. We will look at KQ4's ownership, management, staff, music, promotion and more. And...have some fun doing it!

We'd love to have your input. Share your memories, send in any artwork you might have, dig out those old newspaper articles, MP3 any old airchecks and send them our way. We especially encourage input from KQ4 listeners. If you remember the station, let us know. Include "then and now" photos if you have them. We will post your thoughts anonymously if you desire.

We will be adding pages as we get the goodies. Check back on a regular basis!

Hey all... just wondering what internet radio stations people listen to and/or would recommend if someone is looking for creative and good music. One that I found and like is <a href="http://www.geocities.com/incredibleeagle">here</a>. Check it out and let me know what you think or what you'd recommend.

> World's first licensed station was in Argentina, predating KDKA by several
> months.

But David....since 8XK goes several years further back, wouldn't that (in conjunction with the list previously provided) make that line somewhat harder to determine? Does the Argentine station in question meet the criteria that the "first" station also be one in continuous scheduled operation since? And does it all really matter, considering that Fessenden proved that there was an audience out there, and a method to transmit audio, 14 years prior to all of it? (Radio is a Canadian invention, by the way. So's satellite radio...Sirius was launched, under a different name, by a Canadian, and it's only with delays that me-too XM-Radio got the head start in delivering service).

# 2839. KBME Houston to Sports Format

Newsgroup: rec.radio.broadcasting
Date: 2004-11-02 20:30:17 UTC
From: Paul Van House <pvanhouse_removeme_@houston.rr.com>
Message-ID: <cm8qop$i6s$1@xuxa.iecc.com>
Source record: 3580

Clear Channel's KBME (Best Music Ever) is changing format to all Sports from a home-grown MYOL format (live during the day and I believe it's satellite nights and weekends). I read about it in the Houston Chronicle last week and cannot remember the switch over date but it is early this month (November.) I haven't heard anything about it on the station but when it hits, gray-haired listeners are sure to revolt.

KBME is home to "Hall Of Fame" DJ Paul Berlin who broke into Houston radio over 40-years ago. Most of that time was spent with low-power rocker KNUZ-am which eventually evolved to a "Pop Standards/MOR/MYOL" format when it moved to KQUE-FM.

Also lost in the shuffle is long-time KBME morning man Scott Arthur. He's been doing mornings and has run a small PR firm since before I came to Houston in 1986. As far as "classic MOR announcers" go, Arthur is my favorite. He spins the "soft" hits (from the 40's to current day), and keeps his listeners entertained. He has a "Good Morning" jingle that must be 40-years old and occasionally has SFX of a cup filling ...implying that he's serving up coffee to the listeners.

PM-driver Bob Elliot only recently took on full-time duties. He'd been doing fill-in at KBME/KQUE for years in addition to serving as the studio engineer for various Houston sports broadcast networks including the Astros.

The KBME format has jumped around a lot over the years.

When SFX bought the KQUE-fm/KNUZ-am properties in 1997 or so they moved the format back to KNUZ-am which at the time was all news...and changed the calls to KQUE-am. SFX then changed the fm format to top 40. Berlin balked at moving back to the low-power am, and his mid-day show moved to news/talk KSEV which broke format to allow Berlin to play music.

I'm kind of foggy on the other developments but SFX ended up selling the FM property to a Spanish broadcaster...or perhaps sold both to Clear Channel which in turn sold the FM to a Spanish broadcaster. Clear Channel then had KQUE-am simulcast with KKRW-FM, and moved the Pop Standards format to KBME - 790-am. I don't recall who owned the 790-am station before that or what its format was.

They then lured Berlin back to do his mid-day show.

Arthur, meanwhile, stuck with the various incarnations of the station and format through the years.

# 2840. For sale: Partial interest in full-time Australian AM station.

Newsgroup: rec.radio.broadcasting
Date: 2004-11-02 20:30:19 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <cm8qor$i76$1@xuxa.iecc.com>
Source record: 3584

For sale:

(The "Radio Crazy" is baaaaakkkkkk!!!) Hi!

Partial interest in fulltime Australian AM radio
station CP. In the 4th largest city in the nation with
city pop. of over 1.4 million. 400 watts
non-directional on 1692 Khz (Expanded band). US
citizens are allowed to own this class of station!

Active or inactive investors with at least $5,000 are
welcome. All investors would be on the board with full
voting rights if desired. No individual may exceed 49
percent. This means me too!

This is a joint venture. There is an element of risk
and you could lose all or part of your investment.

The seller wants only $40,000 US for the CP and is
willing to seller-finance with $10,000 US down. Please
understand this is for a licensed but UNBUILT station.

I have the coverage maps showing the 10.0, 2.5 and 0.5
mv contours and will email to interested parties as a
JPG file.

I dare you to even try to get a CP for an American
city of over 1 million for $40,000.

Tel: (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"

Hello all,

I am a college student working on an article for a magazine writing class about college radio stations. I am exploring the history of college radio and its role today, as an outlet for non-mainstream music and ideas, compared to the many commercial, conglomerate-run stations. I would appreciate any input on the subject - whether it be your opinion about college radio's role today or facts about the history of college radio (or anything else!) If you would be willing to help me, feel free to post a reply or e-mail me at ajhalco@bgnet.bgsu.edu. Thanks so much!

The FCC wil put 288 FM radio licences up for auction in the US, starting on Wednesday. The licences will grant the holders' authority to build commercial FM stations in certain towns and cities across the country. It is the first time in five years that FM spectrum is available. Some of the more popular licences have attracted up to 80 bidders, ranging from top of the range conglomerates, right down to enthusiastic individuals.

Most of the licences are for towns across the south, west, and midwest. 28 licenses are available for stations in Texas alone.

First we lost KRTS Classical, now the golden oldies of KBME. KUHF (U. of Houston) still plays good music, but they fill drive time with the self-righteous NPR; not what I need while struggling through Houston's traffic. Guess it's time to carry the CD's back and forth to work.

The Billings Gazette
November 2, 2004
Washington DC

Gary Smithwick worked as a radio announcer during high school and college.

This week, the D.C. telecommunications lawyer will try to buy a radio station.
The Federal Communications Commission (FCC) will auction 288 licenses that grant authority to build commercial FM stations in specified towns and cities across the country.

As many as 456 applicants will bid on licenses.

"It's like a lottery ticket. People see the licenses and think, 'Maybe there's an investment opportunity for me,"' said Smithwick, a former FCC attorney.

The auction, which begins Wednesday, will be the first since 1999 to sell spectrum on the FM dial, and has generated interest among radio conglomerates, regional broadcasters and individuals.

At least 47 individuals and companies, including Mr. Smithwick's B&S Broadcasting Co., have been approved by the FCC to bid on a license to build an FM station in Nassawadox, Va., a blip of a town on Virginia's Eastern Shore with 572 persons but no radio station.

The licenses most in demand are for stations in Carmel Valley, Calif., and Taft, Calif. Nearly 80 applicants have indicated they will bid on each license.

"I have been in this business a long time, and I was shocked at the number of applications for licenses," said George Reed, managing director of Media Services Group, a media brokerage firm in Jacksonville Beach, Fla.

Clear Channel Communications Inc., the nation's largest broadcasting company, with about 1,200 radio stations, filed papers with the FCC indicating it will bid on just one license - for a station in rural Manson, Iowa.

LUK Broadcasting LLC, owned by the behemoth holding company Leucadia National Corp., which earlier this year said it wanted to buy all of MCI Corp.'s outstanding stock, will bid on up to 286 licenses.

Individual investors and radio junkies also will participate in the auction.
"There are &#65533;bidders&#65533; who are literally people off the street," said Todd Stansbury, a lawyer in the media group at Wiley, Rein and Fielding, a firm

in the District.

He predicted the unprecedented interest in new FM stations will make the licenses costly.

"Given the fact that we've not seen an auction for five years, I would expect people to be willing to pay. The interesting part to me will be how much people are willing to pay," Mr. Stansbury said.

The 1999 auction raised $57.8 million. This year's auction could raise hundreds of millions of dollars.

Each license goes to the highest bidder. Companies participating in the auction had to pay a percentage of the value of a license on which they want to bid before the auction, and the FCC has nearly $81 million in upfront money. LUK Broadcasting has put up $10.8 million.

The FCC is holding the auction now because of demand for new radio stations. There are 6,218 commercial FM stations, but many towns and small cities are without their own broadcaster.

People have asked for stations in these 288 towns and cities because none is home to a licensed station, even though they are within range of other broadcasters, said Peter Doyle, chief of the audio division of the FCC's Media Bureau.

Towns throughout the Midwest, West and South are getting most of the new commercial FM radio stations. There are 28 licenses available for stations in Texas, 20 in Colorado, 18 in Montana and 17 in Wyoming.

The license for a station in Nassawadox is the only one available in Virginia, and no licenses are available for new stations in Maryland or the District.

The signal strength of the stations, which could open within three years, will vary from 3,000 watts to 100,000 watts, based on the classification the FCC has attached to each license.

Mr. Smithwick and his business partner, Arthur Belendiuk, aren't thinking about the type of station they want to start. They simply want to obtain a license to broadcast.

"We're pretty flexible. Will we play country music? I don't know. I don't care. What you do first is get authorization," he said.

Yes on all counts.

The predecesor of KCBS and KPO in San Francisco - San Jose goes back well
before licensing as an experimental radio station. But it was not a
broadcasting station per se.

> And does it all really matter,
> considering that Fessenden proved that there was an audience out there,

>From the September 16, 1946 edition of Broadcasting:

"In 1892 across a swampy southern woodland near Murray, Ky., an obscure farmer-inventor named Nathan Stubblefield, so legend says, sent the world's first radio message. "Hello, Rainey," are supposed to be the words he transmitted without wires to Rainey T. Wells, a young attorney and friend.

Mr. Stubblefield, however, died without recognition and Murray, which claims to be the birthplace of broadcasting, doesn't even have a station."

In 1902 Mr. Stubblefield twice demonstrated "wireless technology" before large audiences in the East, once from a steamer in the Potomac River off Georgetown. He was granted patents in 1908, but partly because of his own peculiarities, his lack of business ability and an abnormal fear that someone would steal his idea, he never commercialized it. He disappointedly retired to a hermit's cabin near Murray, where he was found dead in 1928."

I think there is a difference between "radio" and "broadcasting" which often introduces confusion into this. What we are really talking about here are broadcasting stations, not radio stations.

# 2855. Burgalry at Forest of Dean Radio

Newsgroup: rec.radio.broadcasting
Date: 2004-11-03 05:24:52 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cm9q34$lh9$1@xuxa.iecc.com>
Source record: 3593
Cross-posted to: rec.radio.broadcasting,uk.radio

02 November 2004

Thieves who took vital community radio equipment worth almost £2,000 have been condemned by radio bosses.

The equipment was stolen during a break-in at the Forest of Dean Radio office in Cinderford. It was used widely by people from all walks of life to make community programmes for Forest of Dean Radio.

Now the public will have to lose out until the expensive equipment can be replaced.

Among the items stolen were two grey laptop computers worth £800 each.

Forest of Dean Radio's Amanda Smith said she was really disappointed that this had happened.

She said: "Whoever it was smashed the front door to get in and they stole the laptops.

"They seemed to leave behind some of the other equipment but took those.

"The laptops are used by people who come in to make community packages, so really they stole them from the community.

"I just think it's terrible and whoever did it needs to realise that they did that."

The station has been on air since July 2002 with several live broadcasts each week and an information loop going out at all other times.

It offers a mix of community-based programmes, including local and national news, current affairs, sport and youth issues.

The equipment that was stolen during the burglary is very important in the day-to-day running of the station.

Forest of Dean police say they are looking into the incident and they are appealing for witnesses to come forward.

Police spokeswoman Zoe Young said: "We received a call at about 7am on Saturday, October 23, to say that there had been a break-in at Forest of Dean Radio.

"It had been broken into some time overnight between Friday and Saturday morning.

"Offenders had smashed the front door to gain access and a number of items were stolen.

"These included two ACA laptops, grey in colour and worth £800 each, a Sony CD writer valued at £250 and a blue audio interface worth £50.

"We are appealing for witnesses to the incident to come forward.

"We would also like to hear from anyone who has been offered these items at a low price."

Anyone with information about the burglary should contact Gloucestershire Police on 0845 090 1234 or Crimestoppers anonymously on 0800 555 111.

I enjoyed Spinner - but netscape took over, and You have to have the AOL broadband to use it. Not possible in Denmark.
Now, what can You recommend instead? I want music online, where I can - like in Spinner - choose the style - blues, disco, rock, whatever - in a god quality. Easy to use, nice to listen too, without having to go through a bunch of adds to get there.
Your recommendations?
P.s&#65533;rensen

# 2859. PWBR '05 Comments

Newsgroup: rec.radio.broadcasting
Date: 2004-11-04 03:38:16 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cmc878$35l$1@xuxa.iecc.com>
Source record: 3597
Cross-posted to: rec.radio.broadcasting,rec.radio.shortwave

Hi, all!

Just received the new Passport to WorldBand Radio 2005 edition
and herewith some comments:

For me, better than last year. (If anybody recalls, last year
I was one of the few people that got a defective copy with missing
and duplicated pages in the "blue pages" section; that was promptly
replaced by Grove upon my report of that. I also had some
correspondence regarding the out-of-date program-schedule info for
the BBC that had not been updated since the 2003 edition; that
turned out to be due to problems (family deaths, etc.) at the
production company.)

First thing I looked at in the Blue Pages was to see if they
were listing RN's new and unusual "9345 kHz" South Asian English
frequency from Tashkent at 1400-1600 UT. It's not there. Guess RN
decided on and publicized that too late for inclusion in the
database. Irritating but understandable.

The one thing that does annoy me of what I've noticed so far is
that there is no mention of RCI's mid-day to the Americas service
in the "What's On" section. That provides great CBC programming
to the greater part of the US, an area that cannot reliably get
this programming via medium wave stations from across the border.
It is certainly worthy of mention. (Even if PWBR is intended as a
worldwide publication, isn't the US readership their main audience?)

These RCI broadcasts *ARE* listed in the Blue Pages. As a matter of
fact, since I had not gotten the new schedule info for RCI after
10/31, I had to tune around on an analog radio to find it on 15180 kHz
and then verify it on my Satellit 800, and then found it listed in
the Blue Pages. It would have been easier if PWBR had mentioned this
and cited the 17765 Summer and 15180 Winter frequencies in the
appropriately-timed (2000 UT range) "What's On" entries, which now
only contain some RCI entries for other-area-directed broadcasts.

The other thing I noticed in the "What's On" section is that the
person doing the BBC-program notes seems to dislike or ignore what
I find to be the best stuff on the BBC, the science programs
Discovery and Science In Action. Every time he refers to the
time blocks when these are aired, he repeats the mention of other
programs in that weekday-daily "science block", Health Matters and
One Planet, but never mentions the others. Why repeat the same
words when one could vary the text? And why not mention that this

IS a "science block", when the BBC on-air announcements refer to it in a similar way?

The receiver-review section pleased me in that it contains reviews for many of the newly-available little cheapy Chinese SW radios. They are limiting it to digital-readout ones only, which is, I suppose, reasonable, though it pains my completionist soul. I was glad to read a thorough pan of the Coby model that had been found at Big Lots by some in mid-2004, and which I missed. But since it is described as being so utterly bad, I am now quite content that I never bought any. The omission of analog-tuned models, though, meant that there is no mention of the Walgreens-sold "Lifelong" teensy-tiny AM/FM/SW radio, listing for $20 and recently on sale at $15. The important thing about that one is that it is an introduction to SW radios for millions in the US, who will never go to Radio Shack and see any other SW radio, but who will see this thing in the Walgreens Drug ads that blanket much of the nation. Even the ubiquitous Bell+Howell isn't as widely seen; only those who get the mail-order catalogs that list that are exposed to that model. I wish it had been reviewed, too. My experience with the Bell+Howell showed it to be pretty wretched, and that kept me from buying the Lifelong since it is even smaller and I expected it to be as bad. But I'd like to see some objective evaluation and am willing to be proved wrong.

The other minor nit about the receiver-review section is that they are repeating the use of manufacturer-supplied graphics of the Grundig/Eton/Tecsun Satellit 800 that show impossible displays on the radio's LCD screen (simultaneous FM-only and SW-only indicators turned on, for example) instead of taking their own pictures showing real-life displays. All the ads do the same, of course, so it isn't unusual. Speaking of ads, the repetition of the same Eton ads over and over and over gets a bit old. I realize their selling the ad space keeps the book's cost down, but some variation from ad to ad would be appreciated.

Anybody else out there have comments about the book? While this might read as if my impression is negative, it isn't. I do like it enough to buy it every year with my own money, after all. I just think that it could be better (if the producers thought more like me :-).

73 and regards, Will Martin (St. Louis, MO)

I doubt that John Peel's family will be too impressed by Dann's exaggeration of his significance in John's life and career. Aside from the late John Walters, Chris Lycett was the producer with whom Peel had the longest and closest relationship. I find it a bit odd that Dann was the one enlisted to do such a tribute.

I've been enjoying Real Rhapsody. It does cost me about $10/month. I feel it's worth it. Over 700,000 songs are available for listening plus many stations. If you have kids the down-side is there is only one kids channel. Their playlist is too broad. One minute they're playing the Muppets the next minute they're playing Aaron Carter. They need to add more stations. One should be Preschool age, the other Pre-Teen and another for Teens.

They do offer 14 days free trial at
http://www.real.com/rhapsody/?src=102504realhome_1_2_2_1_1_1

Check it out!

I purchased this Roady 2 radio few months ago with the hope of receiving the free "home antenna kit" rebate they were offering at the time. Now it has been more than 9 weeks and I still haven't received it. They said it was in back order. OK. I just now called XM radio rep to deactivate my XM radio service for 6 month, maybe more, to compensate this, which I consider as a loss.

Company should do what they promise, thats's it. Tired of those prolong, unrealized rebate games.

Bt Robert McNeil

Blood on the Carpet: Walking With Disc Jockeys, BBC 4
Natural World, BBC 2

Widespread grief at the recent death of John Peel demonstrated how disc jockeys have become big personalities in public life. It wasn't always thus. In the 1920s, when it all began, the BBC instructed its DJs (meaning, in this context, dinner-jackets) to keep themselves out of it and just offer polite introductions to the music.

Blood On The Carpet: Walking With Disc Jockeys** (nice half-pun on Walking With Dinosaurs; oh, you'd noticed that yourself?) traced the rise of the DJ from plummy-voiced poltroon to slavering scruff.

Christopher Stone was the BBC's first DJ, or presenter of music, playing shellac discs designed to discourage foot-tapping and similar instances of physical hedonism. Christopher and his successors had to submit their scripts in advance to the "presentation controller" (a fat bloke, we presume), who would excise any mention of the presenter's name. "Uncle" Rex Palmer must have sneaked in a bit of personality, mind you, even if only an avuncular one.

In the United States, meanwhile, commercial radio had to be more lively - by which I mean crass - to attract listeners and those who prey upon them, by which I mean advertisers. Here, in 1954, Alan Freed was reputedly the first person in the world to say the dreaded words: rock and roll. How dare he! Didn't he realise there could be women listening?

Back across the pond, Radio Luxembourg was emitting evil airwaves from the continent, promising in dreadful mid-Atlantic tones "pops-a-plenty and top 20". On the ocean wave, too, the pirate station Radio Caroline offered non-stop pop and gibbering from DJs with no script.

Peel was an exception to this trend, with his show, The Perfumed Garden (didn't the Sixties spawn such lovely names?). He said: "I didn't see the need to say anything. What was important to me was the music." How ironic that, of all DJs, he became the best loved for his personality.

The BBC was still offering "jolly music to help you through the day" when Alan Freeman arrived from New Zealand with his interesting and amusing catchphrase, "Not 'arf".

When the Government banned the pirates, pop-pickers feared the worst. One mini-skirted burd said: "The BBC? It's bound to be dead." In fact, the Beeb's corpse was twitching to the beat, and the newly funkified corporation went to the opposite extreme, making stars out of its DJs, who found themselves

chased down the street by girls with poor self-control. Never mind dinner-jackets, this new breed of chap would sometimes present his show half-naked. Honestly, you didn't know where to look when you were listening.

By the 1990s, if I haven't got my decades in a dither, new pirate stations were promoting raves and music with lyrics about jacking one's anatomy or shaking one's booty, which one presumes is a corruption of the perfectly respectable word "bottom".

DJs were also performing in front of thousands, scratching records back and forth, and effortlessly mating Tom Jones with Kraftwerk. Dance jocks became household names, though not in any household I've ever entered. I make an exception of Fatboy Slim, mainly because his name has often intrigued me. How interesting, therefore, to learn that he was really called Norman Cook, which may explain why, far from being "cool", he always looks uncomfortable.

Being uncomfortable is a classic sign of civilisation, so all may not yet be lost. Lost, though, is John Peel. *Blood On The Carpet was part of the admirable Time Shift series, a televisual chronicle providing the right amount of information at the right pace. Unfortunately, time had caught up with its inadvertantly poignant caption for John Peel: "DJ 1967-present."

I'm not a big fan of death, which means I tend to avoid nature programmes, where Bambi is murdered nightly. Death, of course, is a way of life for lesser species (such as the Countryside Alliance) and there's nobody more adept at dishin' it oot than your average lion. He's never happier than when he's got his gnashers in something else's neck. However, as **Natural World explained, he now faces extinction himself, with numbers perhaps as low now as 16,000.

Part of the reason for this is that they've started to attack cattle, which has angered the farmers, and if there's any creature that knows more about dishin' oot death than your lion it's your farmer.

In South Africa, a Dr Vartles has set out to redress the balance by setting up a lion sperm bank. I can't tell you how this works because, frankly, the very mention of the s-word made me look away. See what I mean? Nature documentaries are not for the squeamish.

# 2867. Pirate Radio 603AM to close

Newsgroup: rec.radio.broadcasting
Date: 2004-11-06 05:39:17 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cmho25$ngq$1@xuxa.iecc.com>
Source record: 3505

Radio operator Mike Spenser on Pirate Radio 603AM is giving up.
Temporarily, at least.

Spenser is closing his transmissions on medium wave 603 kHz, transmissions
said
to be illegal by license owner Roy Sandgren.

"I'm going to England for ten days to negotiate a great contract," Spenser says to the local newspaper Ålandstidningen.

If Spenser can resume his transmissions later on is doubtful. The local governmenton the Finnish island of Åland has ruled that Mr Sandgren's licens is suspended for the next six months. That is not deterring Mike Spenser.

"I have the right to lodge a protest."

Local administrator Veronica Johansson sighs.

"If they would just calm down a little," she says to Ålandstidningen.

Sweet! (10:47am EST Wed Oct 27 2004)
I like it! - by Nice

A satellite radio w/ an FM transmitter! (11:00am EST Wed Oct 27 2004)
ut-oh.... now the FCC will still be able to fine Howard Stern. - by oh sh1t!

re: oh sh1t! (11:03am EST Wed Oct 27 2004)
yesh... i'm sure Sirius will be coming out with one of these in the near future too.
Satellite radio is very competive.
Apple should intergrage an XM or Sirius receiver into the next iPod. Now that would be cool. - by mingisback

Too pricey
(11:34am EST Wed Oct 27 2004)
This sort of thing is long overdue, but they are charging $350 for it. I would have preferred they drop the recording feature and lower the price by half. The thought of taking XM anywhere I go is wonderful, but the price needs to be more in line with the other XM devices. - by akula

XM Mobile Radio (1:03pm EST Wed Oct 27 2004)
Yes! Finally satellite radio is portable...its about time. Anyway, I dfinately agree this first generation radio is way to expensive, but as with all new technology, it does eventually drop in price. Hopefully this will happen...and soon. - by lance

Hmmm... (2:29pm EST Wed Oct 27 2004)
Why would anyone would wanted to pay $350 for the unit and then they charge you some more for monthly subscription fee. No thanks. - by :-[

Very cool (5:14pm EST Wed Oct 27 2004)
I like this one...price will drop soon enough - by Nunhgrader
XM radio will be obolete (5:36pm EST Wed Oct 27 2004)
it will be obsolete when we have highspeed wireless internet connections everywhere and we can just listen to webradio free of charge. - by JZ

what about a satellite phone with a (5:46pm EST Wed Oct 27 2004)
built-in satellite radio and satellite tv? - by wishing

Expect discounts for long term contracts (8:29am EST Thu Oct 28 2004)
I can see XM offering this for half price (after rebate) if you sign up for a two+ year contract. This would be similar to the satellite TV model started in the 90's and the cell phone model being used today. Give away the hardware and make money on the service. - by Barkley

Great Idea! (12:18pm EST Thu Oct 28 2004)
Me and you both, wishing. I suppose in time we will be able to have portable satellite tv receivers. Of course since it took all this time to make a portable satellite walkman type radio, we could be waiting a year of two. - by anxious geek

Better be worth it. (11:58pm EST Sat Oct 30 2004)
I hope they have a liberal return policy. At this price it should work everywhere and sound great. I work with loud machinery and wear FM headset/hearing protectors. If I can broadcast an FM signal to the headsets I'll be in heaven. - by Jed

# 2869. FCC Sticks to Pirate Fine

Newsgroup: rec.radio.broadcasting
Date: 2004-11-06 16:45:56 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cmiv44$2b8$1@xuxa.iecc.com>
Source record: 3508
Cross-posted to: alt.pirate.radio,alt.radio.pirate,rec.radio.broadcasting

5 November 2004

The FCC has upheld a $10,000 fine against a man it says ran an illegal station out of a restaurant in Orlando, Fla.

Everald Oliver Brown had appealed the 2003 fine, arguing that he didn't respond to the first notice issued after field agents spoke to him at the station because he thought it was a warning only. He also said he was under the impression someone was applying for a station license. The agency said Brown indicated he would send his credit report to the commission, to back up his claim that he could not afford to pay the penalty.

The commission says it didn't get that credit report and regardless of whether he is the station owner, he was broadcasting illegally and is liable for the $10,000.
The agency also upheld an earlier fine of $10,000 against David Michael Oaks for operating an illegal station in Beaverton, Ore.

Oaks said he realized his transmitter was exceeding allowable power limits for an unlicensed Part 15 transmitter, and he tried to lower the power each time he received a notice to this effect but was confused about how far over the limits his power levels were.

The commission didn't accept this argument and reaffirmed the fine.

November 06, 2004
By Richard Beard
(extract)

The short-wave radio Reflink, available at Twickenham and several Premiership grounds, has also contributed to this humanisation of the referee. He speaks, he breathes (often very heavily), he stutters and gets confused. Anyone genuinely interested in what a good referee is saying can save money on Reflink by watching any match involving Tony Spreadbury. You don't need radio assistance to hear him, and his reffing works on the principle that because he's talking, he must be watching.

While referees are often perceived to be unjust, the Reflink has accidentally revealed the greater injustice of players. The most shameful performance overheard so far comes from John Eales in the 1999 World Cup final. Eales repeatedly bluffed Andre Watson that he'd take his team off the pitch (in the World Cup final!) if France weren't penalised for gouging, a horrible crime but one for which on this occasion there was no evidence. Four year later, the same referee whistled the 2003 final as if the Wallabies were still about to take their ball home.

The signal on 567 kHz is coming in well in this part of London just before 0300 UTC on 6 November. The main test will come once the sun rises around 0700 UTC or so. Prior to the closedown, the signal could be heard in London throughout the day, if somewhat weak, despite adjacent channel splatter from Spectrum 558, and I would expect the same to apply now, assuming that the signal characteristics, ie power and antenna set-up, are the same. During the night the signal, as well as the audio quality, is better on 567 than on LW.

It will be interesting to see whether RTE offer any alternative programming on 252 as opposed to 567. I would assume that alternative programming is offered on FM whilst sports in on the other outlets, but of course the FM signal will never reach London.

John,

XM radio enthusiasts should hold onto their hats, as Delphi has just unveiled the first truly portable XM (a.k.a. "XM2go") radio. The Delphi XM MyFi is unqiue because it has the first built-in XM antenna. It also has a built-in FM wireless transmitter and a rechargeable battery providing up to 5 hours of use. The MyFi comes with a car and home kit, remote control, and earbuds. The device is made to be used while walking or running, which is a first for satellite radio. You're probably wondering what good the satellite radio will be if you're located somewhere you can't get a signal, but the folks at Delphi have this covered as well: the MyFi also has a memory mode that allows you to record 5 hours of XM content. The Delphi XM MyFi will be available for US$349.99 at major U.S. retailers and online in December. Read more from the XM website.

So contact your State Atty General and request help with the rebate.
Usually a letter from an Atty General's office gets the rebate coming
and if it doesn't, your failure to receive the rebate may be part of a
suit against the company in question.

Thankfully Colonel Tupperware, you are in a minority in thinking that JP waxs an nlistenable nerd. If you didn't like John Peel you could choose not to listen to him.

Personally I found Home Truths one of the highlights of the radio week. John had an easy style that put people at their ease. He had a rare skill of listening to and empathising with people, and his programme also highlighted the amusing and ridiculous in mundane everyday events.

His influence in launcing some of the most influential of populour musicians is alsop unprecedented. If it hadn't been for John Peel we might never have heard of T Rex, Black Sabbath, The Smiths, Punk, a number of Jamiacan Reggae artists etc etc. I for one first discovered Punk and then The Smiths through listening to his late night show.

All those who do not like bland, sacharine, plastic pop owe him a debt of thanks.

Depends on the stucture and where you're located. I have XM's indoors
that work great with no access to windows.

However, the MyFi has 5 hours of recording and TIVO-like functionality
built in -- so you can record up to 5 hrs of programming for use
indoors if you're where there is no signal. Indoor reception won't be
as good as ooutdoor. The unit has a built-in antenna, but a clip-on
external antenna when needed.

>prolong, unrealized rebate games.

So... you bought a Roady, subscribed to the service, waited 9 weeks
for a rebate item to arrive and when it didn't you cancelled the
service?

In other words, you bought a product and a service you wanted, but
because they didn't come through on something over and above what you
originally expected (for free, by the way) you are willing to eat the
cost of the equipment and cancel the service that you wanted.

Genius... pure genius...

# 2880. Chicago's super jock Larry Lujack inducted into Radio Hall of Fame

Newsgroup: rec.radio.broadcasting
Date: 2004-11-07 16:40:11 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cmlj5b$n1a$1@xuxa.iecc.com>
Source record: 3519

By Roz Varon
November 5, 2004

Chicago super jock, Larry Lujack is being inducted into the Radio Hall Of Fame. ABC 7's Roz baron takes a trip back to her radio days, as she talked to Ole' Uncle Lar at his current radio home, Real Oldies 1690 am.

(ABC7 Video Clip at http://abclocal.go.com/wls/news/110504_ns_lujack.html )

"Here we are again, the Animal Stories news team anchor men, there's me, your charming and delightful Ole' Uncle Lar, and there's hime, little snot-nosed Tommy!" said Larry Lujack, Radio Hall of Fame.

In an age where radio is every changing, it's nice to know that uncle Lar and little Tommy are still around to get ya laughin'! Lujack is in town for the ultimate radio honor. Saturday he'll be inducted into the radio hall of fame. We got to visit with him on the air this morning, and he hasn't changed a bit!

"I know what they're going to do, they'll film about 5 minutes worth and use 5 seconds and wait until we pick our nose like this or scratch our butts and that's the part they'll use!" said Lujack.

Lujack spent 20 years of his radio career in Chicago, mostly at the Big 89, WLS. He retired in 1987, but couldn't get the radio bug out of his system. Roz Varon was lucky enough to have worked with the radio legend at the start of his broadcast career.

"I remember back when she was a nothing!" said Lujack.

"Contrary to popular belief you really were very instrumental in influencing me in the early days of my career; you were so kind to me, so giving, and nothing like your on air personality!" said Varon.

All kidding aside, lujack is humbled by the radio hall of fame honor.

"You look at the name of previous inductees, like Walter Cronkite, Edward R. Murrow, Jack Benny, Bob Hope and then you throw in the name Larry Lujack at the end and it just doesn't sound right," said Lujack.

"It's about time. I think most people, especially those who have worked with Larry in the past and people who have listened to him have said how come it's taken this long for him to get into the hall of fame," said Tommy Edwards, operations manager Real Oldies 1690.

"To relax myself I will down 5 or 6 quick Coronas and then get up there and think I'm being really funny and instead humiliate and embarrass myself and I tend to ramble," said Lujack.

But that's why we love him!

"Til then, this is both of us, him and me saying BYE!!"

To see a video stream of the induction-or get more information on the Radio Hall of Fame-visit www.radiohof.org/

You can see the ABC7 report by clicking on the video icon above. You will need Windows Media Player to view this video. You can get it FREE by clicking here. NOTE: Video clips will only be available for 5-days from the date they were created. ALSO: Video clips will play in a separate window on Mac OS X machines, you may also see a video help screen.

On my encouragement a co-worker bought a Roady2. It worked fine in his car. He then bought a 12V wall-wart and tried it in his apartment in downtown DC. It works fine - in fact conventional AM/FM are very poor in his apartment.

XM has quite a few repeaters around DC and that helps. The building where we work in the suburbs is solid concrete with metal interior walls. Even in my north-facing office XM works fine - doubtless due to a repeater.

XM has enough repeaters in the DC area that I can hear them in every mall's multistory parking garage I've tried.

YMMV

This problem has been widespread and is uncalled for. The problem has persisted for a very long time. I am an XM stockholder and know many others who are stockholders -- and several have had the same problem.

I have forwarded a copy of your message to a member of XM's management -- I hope to hear back tomorrow & post a response.

XM has operated with superb near-perfection. It is remarkable that this one thing has not been attended to.

You may want to check out some of the people at xm411.com about this -- others have the same problem & may be able to provide advice.

I don't know if it helps your situation immediately, but I have received back an email from the CEO at XM who agreed this problem should not have persisted, and committed to follow up on it at once. I also noticed he had forwarded my email to several other people.

My guess is they'll make every effort to build a fire under those who are dragging their feet. It is highly unusual for this company to have allowed a problem like this to persist, but your's isn't an isolated incident.

Hopefully, this will help.

Hi guys,

In the next 8 months or so my XYL and I will be moving out of NYC into our own place, hopefully in Fairfield Co. CT or in Westchester County, NY.

I'm now about 1/2 a mile away from 50kW worth of 1560 "Radio Disney" in Maspeth, Queens, and I want to ensure I don't wind up close to another boradcast transmitter after the move. I enjoy operating 80M, and I would like to try 160 if I can get enough real estate to make it happen, but being close to that much MW Broadcast RF again isn't something I want to contemplate.

Is there a resource somewhere on the Web that will allow me to find AM transmitter sites (by geographc region) easily enough? Sure, they should be self-evident when in the immediate area, but I don't want to find any last-minute surprises either.

Thanks in advance.

I recall seeing something on the FCC website. Too tired now to look
for it.

Also worth checking with aviation maps or the FAA, as any tower above
a certain number of feet has to be approved by them as well.

This is an FCC fine, not a court-ordered one if it is the FCC that upheld it. That means they ahve no way to collect it except by holding up any other FCC licenses or whining to credit bureaus(if they even do that).

Remeber the Janet Jackson issue? The FCC wanted to fine her,but soon realized they would be unable to do anything if she refused to pay as she does not hold any FCC licenses to revoke.

Only court-ordered fines can be imposed using threats of jail time. I would advise closing bank accounts if you are ducking a court-ordered fine, but these guys have no more power than a credit-card company. this fine is like a parking ticket against someone with no license plates or drivers license, and just as uncollectable.

Peter,

Go to http://www.fccinfo.com/ and enter either the coordinates or location
of the center of your area of interest and search for AM stations within
however many kilometers you wish. This site downloads the FCC CDBS database
nightly and parses it in very user friendly fashion.

Regards,

Al

Spanish language listeners in Buenos Aires now have more opportunity to hear BBC World Service programmes. Radio Europa 97.1 FM has revamped its schedule to include programmes in Spanish. Radio Europa listeners in Argentina's capital can now hear BBC Spanish American service programmes nine hours daily, Mondays to Fridays from 1200 to 2100 and on Sundays from 1800 to 2200 local time. Listeners will continue to receive BBC World Service programmes in English from 2100 to 0500.

Radio Europa is a collaboration between BBC and Radio France Internationale, and the new schedule will continue to carry the RFI output. Lucio Mesquita, Head of the Americas Region, BBC World Service, said: "The addition of Spanish language programming to Radio Europa recognises the language's cosmopolitan and global role along with English and French. By broadcasting in Spanish we will be able to bring to a wider audience in Buenos Aires the BBC's high quality international programming."

Gustavo Muro, Director of Radio Europa, said: "We are pleased to be broadcasting a wider choice of programming from the world's leading international radio broadcaster. With access to BBC Spanish programming, Radio Europa's listeners will benefit from Spanish language news and features with a global perspective."

In addition to the programming on Radio Europa 97.1, BBC World Service programmes are currently broadcast on FM in Buenos Aires on la 2x4 92.7 FM and Radio Belgrano 89.3 FM, and on AM on Continental 590 AM, Radio Colonia 550 AM and its national network Radio de la Ciudad 1110 AM.

----------

Using the link below will give you a list of AM & FM stations, sorted from max to min by the field strength they produce in the ZIP code you enter.

Probably a more useful and easier approach than doing a coordinate search for tx sites.

Monday, November 08, 2004

Dublin Rock Radio Ltd, trading as Phantom FM, which began life eight years ago as a pirate station, was this afternoon awarded a licence for an alternative rock service for Dublin by the Broadcasting Commission of Ireland. There were four other applicants for the licence. Phantom FM has been an Internet-only station, having decided in 2001 to stop its pirate activities and devote all its energies to obtaining a licence. It was unsuccessful on two previous occasions, but did operate two 30-day temporary licences. Now the station hopes to launch its full-time service in the middle of next year, targeting alternative rock fans between 15 and 34 years old.

I believe you may be hearing WNTF, licensed to Bithlo, FL. They were/are a 2100 watt daytimer, but it looks like they've received a CP to upgrade to 10,000 watts directional - still as a daytimer. Perhaps they're operating under a testing waiver while they perform the upgrades?

Thanks for your note. Sorry you're having trouble with our new
website design.

Over my objections, "voanews.com/ourworld" no longer takes you to the
Our World page. Instead, it takes you to the science and technology
page. The theory is that the visitor will find the latest stories
here, since this page is updated daily. Since Our World is a weekly
program, the Our World page is updated only weekly. (No, it doesn't
make any sense to me either, but I produce a radio program; I don't
have any say over the website.)

There are three ways to get to the Our World page where you can find
audio files. From the voanews.com/ourworld page you can click on the
link to Our World (It's the left-most graphic at the bottom of the
page). Or you can look in the left column for the "Programs A to Z"
section, click on "Find VOA Radio or TV Programs," then click on
"O" and then "Our World." Or, easiest of all and special for you,
just click on the link below:

http://www.voanews.com/english/science/ourworld.cfm

You can download an MP3 or listen to a streaming RealAudio version
of the show.

We're still having many technical problems with the software behind
our website, so please be patient if you find a problem. (And feel
free to use the "contact us" mail form to let us know of any
problems you find.)

Thanks again for writing.

Best regards,
Art Chimes, producer-host
Our World

# 2908. Radio bands fetch millions: Cape-based FM signal draws $3.93M bid

Newsgroup: rec.radio.broadcasting
Date: 2004-11-13 17:02:26 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cn5en2$s3$1@xuxa.iecc.com>
Source record: 3550

By Brett Arends
Friday, November 12, 2004

Brewster, on Cape Cod, would seem an unlikely scene for a media bidding war. The 200-year-old seaside town - whose Web site boasts of its 23 nearby ponds - has a year-round population of under 10,000, though that rises to 20,000 in the summer months.

A FM radio frequency based there was put up for auction by the Federal Communications Commission last month with a starting price of $90,000.

Current bidding: $3.93 million, by public broadcaster WGBH, which also operates Boston's Channel 2 TV station. Otherbidders include College Creek Broadcasting and CRB Media.

The frequency doesn't even come with a station or a transmitter. The winner of the auction will, quite literally, receive just air.

They will have three years to jump through further regulatory hurdles, raise the masts, set up equipment and begin broadcasting. They will be restricted to a modest 6,000-watt transmitter.

What's going on? Analysts note that available radio frequencies are becoming increasingly rare, so when they come up for auction the bidding becomes intense.

And whoever wins the right to put a tower in Brewster - within sight of two golf courses and plenty of marshland - has the chance to reach much of the Cape.

The estimated revenue of the Cape Cod radio industry last year was $13.5 million, according to the specialist research group BIA Financial Network.

WGBH wouldn't comment yesterday. But it looks like the nonprofit broadcaster wants to add to its Cape and Islands news-focused radio network, which reaches Nantucket and parts of the Cape.

``It will help them extend the current service to an additional population, and because they have already paid for all the staff and programming, they can provide the service at a lower incremental cost,'' expert Marc Hand explained yesterday.

Hand is managing director of Public Radio Capital, a nonprofit organization that advises public radio and TV broadcasters.

He says similar stories are going on around the country. In all, the FCC is auctioning 288 individual bits of the airwaves.

The auctions were delayed for five years because of a lawsuit from public broadcasters.

Starting bids, set by the FCC, totaled just under $11 million. Today, the bids have topped $117 million and they haven't finished yet.

## 2909. Ireland - Solas AM call it a day

Newsgroup: rec.radio.broadcasting
Date: 2004-11-13 17:02:28 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cn5en4$s8$1@xuxa.iecc.com>
Source record: 3455

Religious radio station Solas AM have handed their licence back to the BCI. The station were awarded a licence to broadcast to Dublin on medium wave in April 2001 but have not managed to get on air.

The station cites prohibitive expenses involved in AM broadcasting when compared to FM. They also are unhappy that they have not been given the option to take a licence for FM broadcasting.
Solas AM ran in to many difficulties in their attempts to get on air. They had claimed as recently as last July that they were not yet ready to call it a day.

# 2910. KTRH Houston drops afternoon News Block

Newsgroup: rec.radio.broadcasting
Date: 2004-11-13 17:02:29 UTC
From: Paul Van House <pvanhouse_removeme_@houston.rr.com>
Message-ID: <cn5en5$sh$1@xuxa.iecc.com>
Source record: 3549
Cross-posted to: alt.radio.broadcasting,rec.radio.broadcasting

Today is the last day for an afternoon news block on Clear Channel's KTRH Houston.

5-staffers will be laid off (fired): PM Drive news anchor Jerry Hudson, who has been with the station "maybe" a year, and longtime reporters Darryl Azar (State Capitol Office) and Gail DeLaughter. Not sure who the other victims are.

The afternoon news block will be replaced from 1-3 with a talk show by TV personality Deborah Duncan, and from 3-7 with Chris Baker who moves over from co-owned KPRC.

So far the long-time Sports beat program continues in the evening but Clear Channel will soon debut an all-sport format on am-790 KBME when it drops its locally grown "music of your life" format.

See a separate post on CC's dumping 101-KLOL's rock format for Spanish language programming.

# 2911. WFCR First In Western Mass. to Go IBOC

Newsgroup: rec.radio.broadcasting
Date: 2004-11-13 17:02:30 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cn5en6$so$1@xuxa.iecc.com>
Source record: 3457

WFCR(FM), Public Radio for Western New England, has begun IBOC operation. In a ceremony Wednesday, long-time donors Joseph and Dorothy Gavin of Amherst, Mass. turned on the HD Radio transmitter atop Mount Lincoln in Pelham.

The Gavins are early lead donors to a capital campaign for a new facility. Mr. Gavin for many years worked as an engineer at Grumman Corporation, where he oversaw the design, testing and manufacture of 12 Apollo Lunar Modules. Dorothy Gavin is an alumna of the University of Massachusetts, the licensee of WCFR.

WFCR GM Martin Miller said, "Digital technology promises to significantly increase the quality and scope of program services the station offers to its listeners. For now, we will be broadcasting our normal programming in digital, but, in the future, we will be able to provide data in addition to sound, or broadcast a second program stream on our assigned frequency."

# 2912. Re: 288 licences up for auction

Newsgroup: rec.radio.broadcasting
Date: 2004-11-13 17:02:31 UTC
From: AlanDean <AlanDean@one.net>
Message-ID: <cn5en7$ss$1@xuxa.iecc.com>
Source record: 3452

B & S Broadcasting was eliminated from Auction 37 at the end of round 18 and thus did not win any
construction permits. On Friday afternoon Auction 37 paused for the weekend at the conclusion of round 22. Three licenses have still not received any bids: Gackle, ND; Medina, ND; and Coahoma, TX. Current top bid is $6.1 million for a license in Pacific Junction, IA, followed by just under $4 million for a license in Brewster, MA.

Go figure!

BBC World Service is now available for the first time on FM for listeners in Bethlehem, Jerusalem and the West Bank.

New partner station, Radio Bethlehem 2000 on 89.6FM will soon be airing 12 hours a day of BBC programming, in Arabic and English.

The BBC Arabic service has over 13.5 million listeners in the Middle East and North Africa.

In addition to short wave and medium wave, the BBC Arabic Service is already available on FM in Bahrain, Iraq, Jordan, Kuwait, Qatar, Sudan and UAE.

Head of BBC Africa and Middle East Region Jerry Timmins welcomed the partnership with Radio Bethlehem 2000: "We are very pleased to have reached agreement with Radio Bethlehem 2000.

"On the day that Yasser Arafat died, listeners in Bethlehem and across the West Bank area have been able to hear the news unfold from Ramallah to Paris and Cairo, live from the BBC.

We continue to be intent on serving our listeners with programming which is in the very best traditions of the BBC."

Unbelievable. 101-KLOL Houston's rock format is no more...Clear Channel replaced it with Spanish Language programming this morning. This station has been around since the mid 70's when it began what was know then as an AOR format.

Amateur Radio Newsline™ Report 1422 November 12, 2004

Amateur Radio Newsline report number 1422 with a release date of Friday, November 12, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC turns off the ham radio licensing computer and a big Aurora opening hits North America. Find out the details on Amateur Radio Newsline report number 1422 coming your way right now.

(Billboard Cart Here)

**

WITH THE FCC: HAM RADIO LICENSING STOPS AND STARTS DUE TO COMPUTER GLICH

Ham radio licensing came to a screeching halt on November 5th. This after a software glitch caused the computer that issues licenses to do some very strange things. Mark Abramovich, NT3V, has been following the developments from Philadelphia and gas more:

--

The FCC isn't offering any official comment on exactly what happened. But Amateur Radio Newsline has learned that the problems with the Universal Licensing System computer started after an Oct. 28 software upgrade installed by a government contractor.

The problems that followed prompted the FCC to order a five-day shutdown of the system which issues Amateur Radio licenses. The system came back on-line on Nov. 10. However, as of our deadline for this week's program, the FCC still planned a weekend shutdown of the U-L-S for maintenance and expected it to return to operation on Nov. 15.

The American Radio Relay League's Volunteer Examiner Coordinator Bart Jahnke, W9JJ, tells Amateur Radio Newsline he was among the first to detect problems while doing a routine check up on the application of a friend near the end of last month.

Jahnke says he discovered the application was - as he describes it - flagged or marked pending by the
FCC for a review by a live person. He says the automated system and its software are set up for minimal human intervention. Jahnke says such a classification immediately raised concerns that something had gone wrong.

Jahnke tells me once he called his contact at the FCC to report the problem, he was told the computer contractor would be notified to investigate.

A couple days later, Jahnke says he was told the problem was fixed. But, as Jahnke tells me, he checked and found that the computer problem had gotten worse. He says he and other VECs were finding the U-L-S had begun issuing Group D call signs - the 2 X 3 ones - to new licensees out of sequence. He says only the first and third call-district applications somehow escaped getting caught up in the problem.

At that point, Jahnke tells Amateur Radio Newsline he and other VECs called the FCC. He says the commission told the contractor to pull the plug on the system on Nov. 5, run some diagnostics and fix it. A message posted on the FCC's website on Nov. 5 said simply: "The granting of Amateur applications has been temporarily suspended. We apologize for the inconvenience."

Prospective hams who had passed VE exams earlier and were awaiting their call sign were getting nervous. Some who received the out-of-sequence call signs were wondering whether the call signs were OK to use. A few had even received a second call sign, cancelling the first. In all, Jahnke says about 130 licensees were affected and thousands of license applications were backed up in the system.

By Nov. 10, Jahnke says the FCC began issuing letters cancelling the out-of-sequence call signs and awarding the proper call signs to new licensees. For some, he says it was their third call sign in a matter of days.

Jahnke says the FCC deserves credit for responding as fast as it did. He also has praise for the other VECs across the country who were in touch the with FCC, too. Jahnke says he's crossing his fingers and hoping the planned weekend maintenance of the FCC U-L-S computer, won't undo the system fix.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

More on this situation in future Amateur Radio Newsline reports. (ARNewsline(tm), NT3V with input from FCC and ARRL)

**

UNEXPECTED VHF DX: THE BIG AURORA OPENING OF NOVEMBER 7

--

N6ZE: "The aurora was very bright most of the time and the magnetic bearing from the airplane extended from 300 degress through about 060 or 070. We saw this for about 3 hours and a distance of probably 1900 statute miles."

---

That's Pete Heins, N6ZE, describing last Sunday night and early Monday's magnificent Aurora from his vantage point in the right seat of a Boeing 757 jetliner. Pete was the co-pilot that night, flying from Los Angeles to New York's J-F-K International airport.

--

N6ZE: "At no time was the visability obscured by clouds, and for about the last 1 hour of the flight we did have about a 1/4 moon in the Eastern sky climbing, and we were still able to see the AU."

--

And while Pete was making his way across country, hams on the ground were sitting on 6 meters, 2 meters and all the bands above. And some like Dave Bernhardt, N7DB, in Boring, Oregon were hearing and working stations all over the place. Dave primarily operated 2 meters where according to the V-H-F reflector he worked W7IUV, K7XC, K7GS, WA6KLK and VE7DXG to name only a few. And Dave was not alone.

On the other side of the country, Jeff Klein, K1TEO, in Trumbull, Connecticut reports making Aurora propagation contacts on 2 Meters as far south as Alabama and Tennessee. To the west Jeff worked stations in Missouri, Iowa and Minnesota.

According to reports from NASA, the Auroral opening was caused by a Coronal Mass Ejection or C-M-E on the Sun. That event happened late on Friday, November 5th with the ionized particles reaching our Earth late on Sunday. Television news programs on Monday night showed pictures of this very bright Aurora as far South as Minnesota and northern Kansas.

On Tuesday the 9th two more solar shocks have arrived. Paul Kelly, N1BUG, in Milo, New Hampshire reported them on the VHF Reflector. The first hit just after 09:00 UTC but did not contain favorable magnetic field vectors or strength to produce Aurora at North American mid-latitudes. The second, arriving near 18:20 U-T-C did produce the classic Aurora buzzing. He later describe this event comig just in time for the natural late afternoon peak for auroral backscatter. He says that the Aurora came up fast and suddenly 2 meters filled with strong buzzing signals. He says over the reflector that he worked as far South as grid square E M 66.

And while hams who only operate the high frequency bands were complaining that 80 through 10 meter propagation had literally disappeared, those like N1BUG, N7DB and K1TEO on 6 meters, 2 meters and above were calling C-Q Aurora and making lots of contacts. All that is except Pete Heins, N6ZE, who landed his big silver bird at New York's J-F-K airport just as the sun was coming up. Then again, you have to admit that sitting at 37,000 feet on the flight deck of a 757, Pete probably had the best view of all. (ARNewsline(tm), N6ZE, VHF Reflector)

**

MORE ON PROPAGATION: WWW.HFRADIO.ORG/PROPAGATION

By the way, Dick Mannheimer, K6LAE, who was one of the first to alert us to the Aurora also passes along information on an excellent propagation website. Its in cyberspace at www.hfradio.org/propagation.html

The site is operated by Thomas Hood, NW7US. If the name and call sign sound familiar its because this is the same Thomas Hood who writes propagation columns for CQ, CQ VHF, Popular Communications and Monitoring Times magazines.

We have looked at the site. It's well worth bookmarking on your web browser. Again the URL is www.hfradio.org/propagation.html (K6LAE)

HELPING HAMS: UNITED WAY REPORTS HUGE HAM RADIO RESPONSE TO ARRL HOLIDAY TOY DRIVE

The United Way in Martin County, Florida, reports "a huge response" by the Amateur Radio community. This, to the ARRL's call to support a toy drive on behalf of the agency's "White Doves Holiday Project."

According to the ARRL Letter, Carol Hodnett, who directs the United Way of Martin County's Volunteer and Community Resource Center says League members from Maine to California have sent toys or money, and more is arriving every day. The League hopes to provide toys for youngsters left homeless or displaced by a string of hurricanes that hit the region earlier this year.

There is still time for you to take part in this very worthwhile project. All you need do is to purchase an unwrapped toy for a boy or girl aged 1 to 14. Please send it prior to Thanksgiving, Thursday, November 25th. Be sure to include a QSL card or 3x5 card displaying your call sign. Mail it to Ham Radio, The United Way White Dove Project, 50 Kindred St, Suite 207, Stuart, FL 34994.

In our view this is Amateur Radio at its very best. Hams helping kids in a true time of need. (ARRL)

**

ENFORCEMENT: ARE YOU THIS PERSON?

An FCC license holder who is likely a ham is being asked by the agency if he is the same person convicted of a number of criminal acts. And the agency has an important reason for asking. Spokesman Daryl Duckworth, NN0W, explains:

--

Duckworth: "Regarding qualifications to remain a licensee, in inquiry concerning criminal convictions for theft by deception and theft by failure to make required disposition of funds as the result of an investment scam went to a licensee in Johnstown, Pennsylvania."

--

According to the FCC release, the person involved is also under investigation by Pennsylvania Administrative Office of the Courts for a possible indecent assault. This is alleged to have been committed on July 30th, 2002.

The purpose of the probe is to determine if the person contacted is the same one as in the alleged and proven criminal cases. For that reason the FCC has withheld the persons identity or any other factual material to indicate whom he or she might be.

But if its the right person, he or she was given two options by the agency. The person can provide additional information on the convictions and charges for consideration by the Commission. Alternately, he or she can voluntarily submit a license for cancellation in order to avoid a hearing on the issue. (FCC, RAIN)

**

ENFOECEMENT: YOU CAN'T SELL THAT BEACON

Still with enforcement news, word that ACR Electronics, Inc. of Fort Lauderdale, Florida, has been fined $75,000. This, for marketing a personal location beacon to the general public that had not been approved by the Commission.

Now here's the ironic part? The CGC Communicator reports that some of the material submitted to the FCC by ACR helped make the case against the company.

It's all on line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-253871A1.doc and http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-04-259A1.doc (CGC)

**

ENFORCEMENT: POWER - LESS POWER CAPTAIN

An unlicensed broadcaster's response to an FCC Notice of Violation has helped to clinch a $10,000 fine issued against him. Amateur Radio Newsline's Bill Pasternak, WA6ITF, has the details.

--

Well, the details really speak for themselves and we would be hard put to say it better than David Michael Oaks. Oaks is the one who received the $10,000 fine for allegedly operating an FM station at his residence in Beaverton, Oregon. This, without the benefit oof holding a valid license to do so.

Quoting from the FCC report and order affirming the fine, the agency says that in responding, Oaks did not deny the charge. Rather, he stated that he was attempting to correct the violation by lowering the power each time he received a notice that he was operating an unlicensed station.

But that's not all. The FCC goes on to say that Oaks asserted that the investigating agent told him that the effective range for a transmitter operating pursuant to Part 15 of the Rules is about 100 feet. Also, that if Oaks chose to do so, he could purchase a Part 15 certified wireless microphone to compare the range of that signal with that of his station.

Oaks did not choose to do so. Nor did he refrain from operating after receiving several written warnings. Based on all of this evidence, the FCC says that the $10,000 fine will stand.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles

http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-3504A1.doc
(FCC)

**

RESCUE RADIO: PROPOSED RADIO JAMMING SYSTEM DROPPED FOR THE MOMENT

Some good news and some bad about an emergency information system proposed by Alert Devices International Corporation. The company has requested that the FCC to dismiss its Petition for Rule Making to create an Emergency Vehicle Signaling Service. This is the previously described service that would allow emergency vehicles to jam out authorized broadcast stations and replace them with emergency warning messages designed to attract the attention of affected motorists.

The good news is that the FCC has granted A-D-I's dismissal request. The bad news is that ADI - according to its latest filing - proposes to submit an "expanded version" of its Petition in the near future. Its all on the web at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-3521A1.doc
(CGC)

MORE POWER CAPTAIN: ELECTRICAL INDUSTRY CHASTISED FOR 2003 BLACKOUT

Those wonderful people that are now bringing you BPL have bigger problems to worry about. This after Federal regulators issue a scathing review of the electricity industry's voluntary efforts to make their power grids more reliable.

The report comes about a year after nation's worst blackout that hit on August 14th of 2003. According to staff at the Federal Energy Regulatory Commission, power industry audits play down shortcomings of the grid system, rely on ambiguous standards that often are ignored and reflect vast differences between the best and the worst performers.

But the agency's chairman Pat Wood did say that there have been improvements since the blackout that was caused by power line problems in Ohio and affected eight states from Michigan to New York as well as parts of Canada. (Published reports)

**

IN PRINT: ALL ABOUT TONE

And with more and more repeaters implementing some form of tone access, it is C-Q Magazine that's taking the lead in explaining how it works to the ham community. In his three page article in the November issue, writer Dave Ingram, K4TWJ, "How It Works" column traces the use of tone access and explains why it can be far more of a friend to hams than a way to keep them off a system they may want to try. You can read what Dave has to say in the November C-Q on newsstands right now. More information is on the web at www.cq-amateur.radio.com (CQ)

**

ON THE WEB: QRZ.COM NEEDS YOU

The giant Q-R-Zed dot com website says it needs some volunteers to help it better serve the needs of the world wide ham radio community. According to its owner Fred Lloyd, AA7BQ, the popularity has resulted in a need to enlist a few more volunteers to help out on the website operations.

Lloyd says that Q-R-Zed currently has openings for two types of volunteers,. These are board Moderators and Callsign Database Administrators. An explanation of the responsibilities of each is on line at the Q-R-Zed site. Its in cyberspace at www.qrz.com. (qrz.com)

CHANGING OF THE GUARD: SHIRLEY WILKERSON JR. W4TBU S.K.

Some sad news to report. Word that Elmer Extraordinary, Shirley Wilkerson, Jr., W4TBU, died on Monday, November 8th. As reported last week, Wilkerson was 84 years old and had been hospitalized in declining health.

According to Tom Webb, W4YOK, Wilkerson was licensed in 1950 and was a one-time member of QCWA with his story featured in the winter 2003 edition of the Q-C-W-A Journal. He is survived by a sister. (W4YOK)

**

TELECOMMUNICATIONS SECURETY: PASSCODE FROM AMERICA ONLINE

Turning to the high tech page, America Online says that it will begin offering members a security device and service that has been used to safeguard business computer networks. This after parent company Time Warner Inc. announces that its AOL unit has signed a deal with Internet security company RSA Security Inc., to launch its new AOL PassCode.

Using an ever changing algorithm, the system is designed to add an additional layer of protection to member accounts. PassCode users will be provided with a small handheld six-digit numeric code key which refresh on the device every 60 seconds. To log onto an AOL account equipped with the service, users will have to type in the six-digits in addition to their regular password.

The price of the code-key device will be $9.95. Service costs will range from $1.95 to $4.95 per month. This, in addition to the usual America Online subscription fee. (AOL, published reports)

**

EMERGING TECHNOLOGY: FALSING CALLER ID

The Washington Post reports that a new technology can trick U.S. caller-ID services into displaying someone else's name and telephone number. The Web-based systems make the name and number appear in a call recipient's caller-ID box.

A company called Star38 that launched in September with plans to market to debt collectors has changed its strategy after consumers complained. Star38 admitted the approach was "flawed," and now says it will market their system to law enforcement agencies.

New Jersey-based Camophone says it will perform the service on a call-by-call basis for a fee of $5 and up. The company said it recognizes that the service could be abused but insists its intent is to help customers protect their privacy.

But consumers worry that the technology could be used by stalkers and debt-collection agencies, some consumers worry. The Direct Marketing Association said masking a marketer's identity is illegal under rules enforced by the Federal Trade Commission and the Federal Communications Commission. (Washington Post)

**

HAM RADIO IN SPACE: AO-51 E-MAIL REQUEST BOX

AMSAT North America has announced the establishment of an E-mail address for AO-51 users to submit requests and ideas for Experimenters Wednesday operations. AMSAT says that this is a chance for the ham community that uses AO-51 to request the modes that they are interested in* seeing operated on during the weekly Wednesday times. All input will be noted but do not expect a reply to your E-mail. Send your requests or ideas to ao51-modes@amsat.org (AMSAT-NA)

**

WORLDBEAT: VE3PU NEW TREASURER OF RAC

Back here on mother Earth, word from Radio Amateurs of Canada that Ken Pulfer, VE3PU has been appointed to the position of Treasurer. Pulfer will complete the unexpired term of Eric Ferguson VE3CR who recently resigned.

This is not Pulfer's first time in the job. He has served as R-A-C Treasurer in the past, and brings a wealth of experience to the position. (RAC)

**

WORLDBEAT - UK: FINAL G5RV LOGBOOK RETRIEVED FROM EBAY

Meantime, word from the United Kingdom that the final log book of one of the worlds best-known radio amateurs has been saved for posterity. This, after it was put up for auction on eBay.

The late Louis Varney, G5RV, of G5RV antenna fame was one of the founding members of the Chelmsford Amateur Radio Society in 1936. So when Chelmsford club member Duncan Munro, M0KGK spotted that G5RV's last ever logbook was being auctioned, the club decided to buy it.

Munro did the bidding. Despite fierce competition he managed to secure the logbook in the last eight seconds of auction.

The logbook shows that G5RV's final QSO's took place on the 11th January 2000 and were , appropriately enough recorded on page 73 of the logbook. The stations contacted were Ron Glover, G0WGP, in West

Sussix and club President Harry Heap, G5HF, in Chelmsford. Louis was, of course, using his famed G5RV antenna for all of the contacts. (GB2RS)

**

DX

In D-X, word that W-6-S-J, will be on the air from the Bahamas as C6AWS from November 26th through December 2nd. Activity will include a Single-Op/All-Band/Low-Power entry in the CQ World Wide DX CW Contest. During non-contest periods, he will concentrate on the WARC bands. QSL to his home call. (OPDX)

And Look for 7Q7LA back on the air from Malawi in a few weeks. This, as G0IAS, updates the OPDX that he is hand carrying some ham gear for Ron to be sure that it arrives safe and sound. G0IAS will leave the U-K on the 28th of this month and is expected to arrive at the Lakeshore on the 30th. The confirmation route for 7Q7LA remains direct to G0IAS. There is no QSL bureau in Malawi. (OPDX)

**

THAT FINAL ITEM: UK HAMS ON THE AIR WITH EXPANDED 40 METER PRIVELEGES

And finally this week, hams in the U-K have taken to the airwaves with their recently expanded privileges. RSGB Newsreader Jeramy Boot, G4NJH, is where it all took place:

--

UK radio amateurs gained access to new frequencies between 7.1 and 7.2MHz from 31st October.
After dark, the band between 7.1 and 7.2MHz is still full of powerful broadcast stations, although some clear frequencies can be found.

The band became available on the second day of the CQ World Wide DX Phone Contest. Many UK stations took advantage of the new band by making contest QSOs with stations in the USA on their own frequency, instead of having to work 'split' as had been the case when contacting North America on 40 metres SSB.

During the daytime, numerous UK stations are now able to have virtually interference-free inter-G contacts above 7.1mhz.

The new band is available to radio amateurs on a Secondary, non-interference, basis until 2009. After the end of March 2009, the broadcast stations should move to other frequencies and 7.1 to 7.2MHz will then become an amateur Primary band.

Jeremy Boot, G4NJH, in Nottingham.

--

Amateurs in the Republic of Ireland were also granted access to 7.1 to 7.2 MHz towards the end of October, joining those in Croatia, Norway and San Marino who already had access to these frequencies. Hams in Switzerland will also gain access to 7.1 to 7.2MHz from 1st January 2005. (GB2RS)
**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). # 2917. Sneaking tiny radios into North Korea

Newsgroup: rec.radio.broadcasting
Date: 2004-11-13 17:02:37 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cn5end$tq$1@xuxa.iecc.com>
Source record: 3451

Fri, Nov. 12, 2004

U.S. plans to sneak tiny radios into North Korea for its information-starved citizens

By Tim Johnson
Knight Ridder Newspapers

Seoul, South Korea - (KRT)

The U.S. government is preparing to smuggle tiny radios into North Korea as part of a newly financed program to break down the country's isolation.

For the next four years, Washington will spend up to $2 million annually to boost radio broadcasts toward North Korea and infiltrate mini-radios across its borders.

North Korea, probably the most isolated country in the world, has only radios that are rigged to capture broadcasts lionizing the nation's Stalinist leadership. The broadcasts also blare from outdoor loudspeakers.

The American plan to smuggle small radios into North Korea is outlined in the North Korean Human Rights Act, which President Bush signed into law Oct. 18.

The sweeping act provides money to private humanitarian groups to assist defectors, extends refugee status to fleeing North Koreans and sets in motion a plan to boost broadcasts to North Korea and get receivers into the country.

North Korea's Kim Jong Il regime says the tiny radios will air "rotten imperialist reactionary culture" to undermine the country.

The human rights act, in its broad scope, also has encountered opposition from President Roh Moo-hyun, South Korea's center-left leader. Officials under Roh say the act will stiffen Pyongyang's resistance to the outside world and hinder already-stalled talks to get North Korea to abandon its efforts to build a nuclear arsenal.

They scoff at the U.S. plan to smuggle in radios, saying it's a goodhearted idea but one that will worsen the plight of North Koreans. Anyone captured with a radio, they said, might face prison.

Supporters of the tactic argue that it offers a ray of hope to a populace that's hungry for news amid food shortages and an acute humanitarian crisis.

"There's an incredible desire among North Korean people to know what's going on," said Suzanne Scholte, the head of the Defense Forum Foundation, a

nonprofit group in Falls Church, Va., that focuses on American policy toward North Korea.

A small number of clandestine radios are already in the country, sent in by helium-filled balloons deployed by South Korean religious groups or brought in by traders across North Korea's border with China.

"Some people listen to South Korean broadcasts under their blankets," said Lee Gui-ok, a young North Korean mother who fled to China in 1999 and later moved to Seoul.

Lee said the plan was worth carrying out - even if it endangered some people - because it would offer hope to North Koreans that the outside world cared about their situation.

"If they don't have radios, they can't listen to South Korean broadcasts. If they had them, they would listen," Lee said.

A House of Representatives International Relations Committee report on the human rights act says North Korea's radio broadcasts exalt ruler Kim Jong Il, feed "paranoia about the threat of attack by the United States, and misrepresent the conditions and standards of living that exist in the outside world, particularly in South Korea."

The plan takes a cue from previous U.S. efforts in other parts of the world. In 2001 and 2002, American diplomats in Havana, Cuba, passed out more than 1,000 short-wave radios so Cubans could tune in to the Florida-based anti-Castro radio station Radio Marti. The radios were taken to Havana in diplomatic pouches.

That wouldn't work in Pyongyang, because the United States and North Korea don't have diplomatic relations.

How to smuggle the radios in remains to be worked out. Legislators may keep operational details of the program classified to prevent North Korea from countering them, said a Capitol Hill staff aide who's active in shaping U.S. policy on North Korea, speaking on condition of anonymity.

"I don't see radios in balloons as particularly tenable," the staff aide said. During most of the 1990s, the South Korean military deployed balloons to send propaganda leaflets, rice and radios into North Korea, but suspended the practice in late 1999 under then-President Kim Dae-jung's "sunshine policy" of opening contacts with Pyongyang.

Since then, Seoul has sought to stop even private groups from airlifting radios with balloons. In March 2003, police blocked a Korean-American pastor from Artesia, Calif., Douglas E. Shin, as he and colleagues prepared to send 700 radios across the border slung from 22 helium-filled balloons.

"Everybody wants the radios," Shin said. "If a regular farmer or worker gets caught, they get slapped on the hand, and the guy who confiscates it keeps it because he wants to listen to it."

## 2918. Switzerland - Special Event Station

Newsgroup: rec.radio.broadcasting
Date: 2004-11-13 17:02:38 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cn5ene$tu$1@xuxa.iecc.com>
Source record: 3453
Cross-posted to: rec.radio.broadcasting,rec.radio.shortwave

The Swiss Radio International broadcast station has stopped using short waves and its transmitters and antennas are being decommissioned. Members of the HB9MM http://www.hb9mm.com/Index_e.htmclub station in Lausanne have been given permission to use the former broadcast station facilities and antennas, including a 62-metre high curtain array weighing 135 tonnes. The special callsign HE3RSI is on the air now until 3 December on bands from 40 to 10 metres. This is the first time the HE3 prefix has been used.

(RSGB)

# 2920. Cuba - Radio Progreso relay on 730 khz

Newsgroup: rec.radio.broadcasting
Date: 2004-11-14 21:08:16 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cn8hg0$d6d$1@xuxa.iecc.com>
Source record: 3460

This is good news for AM band Dxers !!!

Just came back from the start-up of the new 10 kW output Radio Progreso relay at the Isle of Youth, south of Cuba.

The frequency is 730 kHz , and the transmitter is rather close to the Caribbean sea, so the 100 meter high TUNIPOLE antenna with 120 radials should be well heard via sky wave during the evenings.

The transmitter is pulse width modulated technology and capable of 125 percent positive peak modulation...

Send your QSL requests if you are able to pick up the new Radio Progreso relay to :
arnie@rhc.cu

I will relay them to Progreso's deputy chief engineer , as we both work in the same
building.

Other Radio Progreso's relays are 900 kiloHertz now in San German with 25 kW PWM transmitter 660 kiloHertz in Santa Clara with 10 kW PWM transmitter and 690
Jovellanos with 12.5 kW PWM also.

73 and good winter AM broadcast band DX season to all

Arnie Coro

CO2KK

(ODXA)

## 2921. Russia marks 70 years of TV broadcasting

Newsgroup: rec.radio.broadcasting
Date: 2004-11-14 21:08:17 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cn8hg1$d6o$1@xuxa.iecc.com>
Source record: 3461

A ceremony to unveil a memorial plaque took place in Moscow yesterday, marking the 70th anniversary of national TV broadcasting in Russia. The plaque is at 7 Nikolskaya Street, from which the first TV broadcast was made in 1934, and which now houses the engineering complex of the Russian National TV and Radio Network...

# 2922. KLOL Houston

Newsgroup: rec.radio.broadcasting
Date: 2004-11-15 03:50:58 UTC
From: Korbin Dallas <korbindallas@yahoo.com>
Message-ID: <cn9932$f9r$1@xuxa.iecc.com>
Source record: 3462

Dear Public,Periodically we hear concerns from you on how we run our radio and TV stations, the formats we choose and the impact to you as we switch formats from ones that have devoted listeners and respect in the community too their formats. As we wipe from the face of the earth stations such as KZEW in Dallas, KLOL in Houston, etc. we must point out that there are important business reasons for our decisions. While we graciously accept the gift of broadcasting frequencies from the public and we do feel some concern for the public's desires, off the record social responsibility is a distant second to the almighty dollar. This should be no surprise to you as you watch publicly funded stations such as public radio and public TV crank out quality, socially responsible programming while the for-profit stations crank out the most controversial,heart-stopping, sin-revealing programming they can produce that will quickly amass broad viewers. This is what the advertisers want and they pay our salaries and the returns to our investors. While we're talking about it,reality TV is just the surface. As we continue to get more creative you will see more programming that pushes the envelope so close with the FCC it makes them crazy and turns off more segments of the population. But if we can get the masses to tune in because they're curious about what sick things we've dreamed up, the advertisers will pay and we'll do it. Do you think we enjoy creating programming where people eat bugs on TV and we depict the average housewife as a conniving cheat? We have families too, folks.We also realize the recessive feel that our actions have also. But folks,as you move to the public-funded programming such as XM Radio and HBO, you pay for what you want and you get it. Those that can't pay for it, get what we send them. Are you still curious why we are wiping stations that appeal to the upper middle class white male and replacing them with something for the Spanish-speaking immigrant?Now that you understand the problem better, we need your help. We need you to stop watching and listening to our stations so that our rating numbers will go down and we will be able to convince our advertisers and investors that a new Latina dance station is not what we need. So turn that dial,don't buy from our advertisers and for heavens sake, if Arbitron calls you,tell them you don't listen to any of our programming. Tell them you've switched to XM, Sirius, HBO or anything else. Tell them you burned your broadcast TV antenna in effigy and that you held a local FM radio burning party. We implore you to take action now.

Thank you,
The Broadcasters of America

## 2923. Re: Sinclair Broadcasting's misuse of the public trust

Newsgroup: rec.radio.broadcasting

Source record: 3463

CBC and Pacifica are far from Unbiased News sources.
They are as left biased as CBN is to the Right.

Sinclair is doing nothing worse then the hatchet job CBS tried to do with
the False Documents or the continual biased news coverage of ABC and NBC.

> formats from ones that have devoted listeners and respect in the
> community too their formats.

Formats are switched when the old one does not have listeners or revenue.
Your argument fils on this fact alone.

> As we wipe from the face of the earth
> stations such as KZEW in Dallas, KLOL in Houston, etc. we must point out
> that there are important business reasons for our decisions.

Yes. KLOL ws declining in revenue and audience. Houston, in ages 12 through
35, is now over 60% ethnic. Hispanic population has increased by 100% in
just 15 years.

> While we
> graciously accept the gift of broadcasting frequencies from the public and
> we do feel some concern for the public's desires, off the record social
> responsibility is a distant second to the almighty dollar.

Serving an audience, any audience, is following the wishes of the public. I
can see the argument coming... it is more noble to serve whites than other
groups... I can smell a racist a mile off.

> This should be
> no surprise to you as you watch publicly funded stations such as public
> radio and public TV crank out quality, socially responsible programming
> while the for-profit stations crank out the most
> controversial,heart-stopping, sin-revealing programming they can produce

Always true. Popular entertainment beats cultural entertainment. True today
nd true at the dawn of radio, true in the vaudeville era, too.

>This is what the advertisers want
> and they pay our salaries and the returns to our investors. While we're
> talking about it,reality TV is just the surface. As we continue to get

> and we'll do it.

Advertisers are looking for bodies, not IQs.

> Do you think we enjoy creating programming where people
> eat bugs on TV and we depict the average housewife as a conniving cheat?

Let's see... on the Honeymooners, Ralph demeaned women. The socially unacceptble is always fair game for humor. Look at All In The Family for another exmple.

> We have families too, folks.We also realize the recessive feel that our
> actions have also. But folks,as you move to the public-funded programming

> that can't pay for it, get what we send them. Are you still curious why we
> are wiping stations that appeal to the upper middle class white male and
> replacing them with something for the Spanish-speaking immigrant?

I told you this was coming. Somehow, Hispanics are less entitled to service than whites. This reeks of Animal Farm. "All listeners are equal, but some listeners re more equal than others." Go paint it on your barn.

Oh, and KLOL's new encrnation is aimed at non-Spanish speaking Hispanics. It is an Hispanic staiton, but not a Spanish station. It is imed at second and third generation Hispanics, who are not immigrants. But that does not help your rcist little agenda, does it?

>Now that
> you understand the problem better, we need your help. We need you to stop

Arbitron does not take udience data on the phone.

> Tell them you've switched to
> XM, Sirius, HBO or anything else. Tell them you burned your broadcast TV
> antenna in effigy and that you held a local FM radio burning party. We
> implore you to take action now.

Sick.

Probably - the smaller stations probably still have one, and the newer ones may have it as a backup if they still maintain an analog program STL feed.

> Can it be used for recording...?

Why would you want to?

> Ruff....value these days....?

Tell you what...if you have one, and $200 to go with it, I'll take it off your hands.

> Thanks.....Mike

Sure. Sorry to abuse your curiosity, but these boxes are some 10-20 years old, and they're really designed as the final link in a broadcast audio chain. Good in their day, today's technology (DSP, mostly) has far outstripped the previously-novel way that this machine dealt with clipping and compression artifacts.

I saw the same complaints right here in RRB/Airwaves in 1999 when Radio One bought WENZ/107.9 in Cleveland and flipped it to hip-hop. Some people complained. In fact, I was one of the people who enjoyed the format, but there weren't enough of us. Clear Channel, it is said, only kept the station at alternative because its sister station at the time (WNCX/98.5, classic rocker, sold to Infinity in the same deal that sent WENZ and WERE/1300 to Radio One) was pulling down great numbers, and they could afford to... not care too much if WENZ wasn't doing well.

Fact is, Cleveland's population is now primarily Black and Hispanic. There was -- IS -- a huge market for the genre of music Radio One put on the air. (I'm actually surprised we don't have any Spanish-language radio stations in Cleveland yet, but... maybe we do, it's been well over a year since I moved out of Northeast Ohio.)

Is Radio One failing to serve the public? Hell, no... they're serving a different chunk of the public, that's all. IMHO it was a very smart move on their part.

# 2930. Teenage Kick Scotland pays Tribute to John Peel for Children In Need 18-21 Nov 04

Newsgroup: rec.radio.broadcasting
Date: 2004-11-16 06:44:00 UTC
From: alec@diamond-dog.co.uk
Message-ID: <cnc7jg$j3i$1@xuxa.iecc.com>
Source record: 3469

The response to "Teenage Kicks" has been overwhelming and there is now a number of venues, promoters and artists supporting the idea of celebrating John Peel's legacy all around Scotland with more coming in daily. The main shows in Glasgow, Inverness and Edinburgh will see the best new Scottish bands play 20 minutes of Peel approved covers. Full details are below.

The Glasgow "Teenage Kicks" gig is at The Revue Bar Glasgow Barrowland Ballroom 8-2 Thu 19 Aug 2004.
The Edinburgh "Teenage Kicks" gig is at The Subway 7-12 18 Nov 04 .
The Inverness "Teenage Kicks" gig is at Madhatters 8-12 Sat 20 Nov 04.
"Teenage Kicks Part 2" will happen again on Sun 21 Nov 04 at Glasgow Barfly with a different line-up , due to over 60 bands wanting to get involved.

All gigs £4/5 on the Door

We are still encouraging every artist, band, promoter or venue to raise a glass to John Peel over the CiN weekend and either collect monies for CiN or encourage your audience to. If you do collect money hand it in to the nearest BBC reception and text a total to 0780 375 2913
Full details of the venues that will be taking part or allowing collections will be added as they are confirmed and feature in the Gig listings of www.nemis.org

There is a cool tribute from Snow Patrol's website here http://www.snowpatrol.net/Teenage_Kicks_Acoustic.mp3 and I would be grateful if you can give this event maximum support by passing this email to music fans.

Cross-posted to: alt.radio.family,rec.radio.broadcasting,us.misc.family-radio

I received this from the station:

Thank you for your inquiry.

On November 1, 2004 KNOW Radio was launched; broadcasting commercial free Christian music worldwide 24 hours a day, seven days a week over the internet.

Founded on the principle of spreading the message of Our Lord and Savior through music and scripture; KNOW Radio has already proven to be a success with hundreds of listeners tuning in.

The goal of KNOW Radio is to be the premier Christian Internet Broadcaster by maintaining the commercial free approach and incorporating other features such as Christian News, messages, sermons and church services.

KNOW Radio utilizes a state-of-the-art digital broadcast solution to deliver near CD quality sound by using the most advanced streaming encoders.

Additional features include advanced playlist rotation logic, automated song requests and a custom web interface to enhance the listeners experience by providing them with Artist, Title, Album, Cover art and other information on songs being played. Listeners are also provided a link where they can purchase the CD from major internet stores like Amazon or directly from the Artist's web site.

We accept and promote only Christian songs, mainly of the Rock, Pop, Acoustic, Country, Alternative, and Praise & Worship genres. To have a good idea of what kind of Christian music we're looking for, simply tune in! http://www.knowingyou.org

To submit recordings for consideration and promotion, please send your CDs to:
Shaun L. Ettinger
KNOW Radio
604 Sheridan Rd 2W
Evanston IL 60202

For additional information or questions please email us at broadcast@knowingyou.org or the above address.

I look forward to working with you.

Blessings,

Pastor Shaun L. Ettinger
CEO/General Manager

For your information, two of the newsgroups you are cross-posting to (alt.radio.family, and us.misc.family-radio) have NOTHING to do with broadcast radio - they are associated with the FAMILY RADIO SERVICE (FRS) radios (little walkie-talkies) that you can buy at Wal-Mart, and the like. Nobody here is going to be interested in these kinds of posts, so I would suggest you stop cross-posting to those two groups.

Thank you for your attention in this matter.

They were made between 1975 and 1980, so they are actually between 24 and 29
years old.

There was a recording studio version made called the 418A that used the 8000's
audio processing but with user-selectable pre-emphasis and no low-pass filters
or clippers. It can be useful as a vocal limiter.

In general, these units will require replacement of the electrolytic capacitors in the power supply, particularly the ones located close to the power regulator transistor heat sinks. If this is done periodically, they seem to be more or less immortal.

Bob Orban

For sale:

(The "Radio Crazy" is baaaaaakkkk!!!!)Hi!

Partial interest in AM daytimer in Alabama. 1,000
watts, non-directional. City of about 11,000.

This is a joint venture. There is an element of risk.
You could lose all or part of your investment.

Active or inactive investors with at least $5,000 each
are welcome. No individual may own over 49 percent
interest. This means me too!

The full asking price for the station is either
$55,000 cash or $75,000 with $10,000 down, seller
financing. No real estate is included.

Station is on the air since 1974.

Tel: (478)741-1710 in Macon, GA. Please....No "AM
bashers" or other negative nabobs!

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"
aka Moron Gottesman
aka Moronic Gottesman
aka Maven Gottesman.

Keep in mind that garnishing bank accounts is only one method of collecting judgements. Garnishing wages, placing liens on property and foreclosures are others.

Realistically there is no way to avoid a court-ordered fine without going to
jail or columbia.

I thought the FM station was owned by some university out there;
the last time I tuned in to the AM, which was a while ago, the AM
side (recently owned by the Catholic church) had been sold and
was running some kind of big band format.

November 18, 2004
By Paul Heine

Scores girls, decked out in Sirius halter-tops, shaking their stuff on stage, hoisting signs proclaiming "Howard Stern-only on Sirius."

An adoring crowd of several thousand Howard Stern fans carrying signs of their own-some homemade, most handed out by Sirius staffers.

A loud sound system pumping out the tunes and Sirius promos.

Howard Stern's noontime appearance in New York's Union Square today felt like a rock concert and a political rally rolled into one.

"Are you ready to get Sirius?" Artie Lange asked the pumped-up crowd, before bringing out the rest of the Stern cast. "Hey now," said Stern, walking on to the stage just before noon. "I wonder what the FCC thinks of this."

Stern's brief spiel was pure Barnum & Bailey-style promotion. He called Sirius the future of radio and said it had re-energized him. He took shots at the FCC and XM. "Once we can give you the show without FCC interference, we will once again have the greatest show in radio," he promised.

Stern told the crowd he was ready to leave radio after his current contract expires, and he told his bosses at Infinity so. Then conversations with Sirius began.

"I thought I was burned out on radio, I thought it was over. but now I'm rejuvenated," he said.

Then came Stern's strongest words: "It's the death of FM radio, the death of the FCC. They have ruined commercial broadcasting."

Stern claimed credit for inventing "a different kind of radio" when his show took off in the '80s. "And the FCC dismantled it."

After plugging his new radio home from the stage, Stern descended into the crowd to grip and grin. 500 or so listeners that got to Union Square early, including some whack pack regulars, were personally handed Sirius boomboxes and a certificate for a one-year subscription by Stern. The rest of the crowd received certificates for a free Sirius radio, "when you prepay for a one-year subscription by Nov. 24."

The Stern-Sirius media campaign continues tonight with an appearance on Late Night With David Letterman.

THIS WILL BE MY LAST TIME I PUT UP NEWSLINE HERE. I MOVE TO ZAKINTHOS IN TWO WEEKS AND HAVE NO AOL THERE. SOME ONE ELSE NEED TO TAKE OVER DOING JOB. IT BEEN LOTS OF FUN.

MR. RADIONEWS

Amateur Radio Newsline™ Report 1423 November 19, 2004

Amateur Radio Newsline report number 1423 with a release date of Friday, November 19, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio in California says goodbye to the Tournament of Roses Parade and W7DXX speaks out on his Internet controlled remote base in Baghdad. And its not the first time. Find out the details on Amateur Radio Newsline report number 1423 coming your way right now.

(Billboard Cart Here)

**

PUBLIC SERVICE: HAMS QUIT TOURNAMENT OF ROSES PARADE - LIMIT SERVICE TO ATV

Ham radio will not be a major part of the 2005 Tournament of Roses Parade. Amateur Radio Newsline's Norm Seeley, KI7UP has the rest of the story:

--

Although it was never officially part of the Tournament of Roses, ham radio has been providing a communications link along the Rose Parade route for more than 40 years. And long before there was any official group, people like Tom O'Hara, W6ORG, of P-C Electronics were the early pioneers:

--

O'Hara: "I first got involved with the Rose Parade
communications
when I was one of the Emergency Coordinators for Pasadena. They asked us ti help out with some longer range stuff than what the CB operators were doing. This was in the middle 1960's."

--

Using video cameras and Amateur television, the ham radio volunteers were ever alert for any kind of an emergency situation that might develop. If they spotted something they would send their pictures

back to the parade coordinator who could then take the necessary action.

--

O'Hara: "Later on they added more and more ATV and more and more
hams. At one time I think there were 17 camera positions."

--

Amateur Radio literally pioneered the use of closed circuit television for coordinating large scale events in the Tournament of Roses Parade. At one time hams even had Amateur Television transmitters sending back pictures from helicopters flying overhead. And they did this long before most television stations had camera equipped news choppers of their own.

--

O Hara: "Got involved with the helicopter with the first ATV in 1968. Put it in the Sheriff's helicopter. And when I got my own helicopter I put it in and flew around one year."

--

As the parade grew, so did the Amateur Radio communications effort. By the 1970's TORRA had unofficially been formed. TORRA stands for
Tournament of Roses Radio Amateurs and in the 1980's the hams involved formalized as a club and with this came the golden days of ham radio supporting the parade.

Today TORRA has more than 300 active members who regularly volunteer their time. At least that's the way it had been until an incident
occurred last year. That's when an incident took place that apparently caused things to go sour.

According to an article in the Pasadena Star News, a pair of ham radio operators were carrying equipment onto the grounds of Tournament House in preparation for the last parade. They were stopped by a senior Tournament official and their presence challenged. The unnamed official even went so far as to accuse the ham radio volunteers of lying to get on the grounds.

Now enter Nextel. The same Nextel that has patented the words push-to-talk.

Nextel is a corporate sponsor of the 2005 parade, and reportedly has donated a number of phones to the event. This means that most Tournament of Roses officials will have a Nextel phone with direct walkie-talkie service in their pockets.

Bill Flinn is the Tournament's chief operating officer. Talking about Amateur Radio's departure he was quoted by Pasadena Star News
as saying: "I think it's come to the end of a run. We are sorry to see them go."

But depending on the Nextel walkie-talkie phones as a primary form of communications could turn out to be a mistake for the parade and those that run it. Unlike hams, parade officials and their corps of volunteers are not trained communicators. Rather they have been used to handing a message to a ham radio operator and having an answer appear. Most are likely unaware that they will have to contend with numerous people calling at the same time. All with priority traffic and all demanding immediate answers.

With their years of experience, the hams were the buffers who learned how to work around these problems. But the cellphone provider is coming in cold with no experience in this specialized communications area. There will likely be no experienced net control stations and no way to prioritize needs.

On Thursday, November 18th, as this report was being prepared, we received a copy of a letter from TORRA Chair Jeanne Nordland, WD6BWN, thats being sent to all of the groups members. It confirms that hams will not be providing voice communications in 2005, but that A-T-V assistance to the parade will continue as it has in years past.

But ATV is only one part of the equation. the question still remains as to whether or not the Nextel phones can take the place of the hams and a structured voice communications network. This is something that nobody will really know until January 1st of 2005. That's when
the drama will be played out live to the world on their livingroom T-V screens -- on New Years Day. And likely, 10's of millions of people will be watching.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, reporting.

--

As Norm said, these days the Tournament of Roses Amateur Radio group currently has about 300 members. How many might return if they are asked back in 2006 is really, anyones guess.

To read the complete Pasadena Star News article on the departure of ham radio from the Tournament of Roses Parade, take your web browser to http://www.pasadenastarnews.com/Stories/0,1413,206%257E22097%257E2529574,00.html

**

THE BPL FIGHT: FCC ISSUES ERATTUM ON BPL R&O

The FCC has issued whats known as an Notice of Erratum. One that slightly modifys its Report and Order on the introduction of Broadband Over Powerline operations.

Two changes were made. First in Section 15.15 under General Technical Requirements section B now reads: "Except as follows, an
intentional or unintentional radiator must be constructed such that the adjustments of any control that is readily accessible by or intended to be accessible to the user will not cause operation of the device in violation of the regulations. Access BPL equipment shall comply with the applicable standards at the control adjustment that is employed. The measurement report used in support of an application for Certification and the user instructions for Access BPL equipment shall clearly specify the user- or installer-control settings that are required for conformance with these regulations."

Also, Section 15.31 is amended by revising a paragraph under Measurement standards to read:
"Measurements shall be performed at a sufficient number of radials
around the equipment under test to determine the radial at which the field strength values of the radiated emissions are maximized. The maximum field strength at the frequency being measured shall be reported in the equipment authorization report. This paragraph shall not apply to Access BPL equipment on overhead medium voltage lines. In lieu thereof, the measurement guidelines established by the Commission for Access BPL shall be followed."
While these changes may seem as minor right now, they could impact ham radio and other services in the future. This, when and if B-P-L ever becomes a major player in the area of direct to home high speed Internet access. (FCC)
**

THE BPL FIGHT: ITS NOT BPL IN WESTERN VK

Meantime, some good news on the B-P-L front from down-under. Word that interference being heard by hams in Western Australia is not coming from a powerline broadband installation. The problem is that nobody is sure exactly what the source is. W-I-A newsman Dennis Muldownie, VK6KAD, is in Redcliff with more:

--

One of the rumors persisting in VK6 is that our power authority is running BPL. This has been denied several times. I may have found the source of these rumors, as I have stumbled across a website dating back to 2002, in which the testing of Broadband by the power company was mentioned.

However it was not BPL technology. There is an ongoing project here to "rewire" the West by placing low voltage and some higher tension

feeders underground. This is - or was - progressing slowly. It improves the street-scape out of sight and reduces the potential for damage in bad weather. In providing these services apparently optical fiber cable was also placed in the trench, and the Broadband was under test on the fiber. Not you will note on BPL.

Very little of WA was ever wired by Cable as in Sydney and Melbourne for Cable TV, and therefore Cable Modems are not an option. The way is clear for the power authority to provide such services by Fiber as it replaces the overhead with underground. I have not found out what the tests revealed.

And having said all that, I am finding excessive noise in isolated pockets on the AM Broadcast band, from power lines in my area. I suspect the approved items used on Power lines obtainable from many outlets are not as bullet proof as we would like to suspect...

The saga continues.

--

The saga does indeed continue and Dennis is one of those at the forefront of the search. (WIA News)

(5 sec pause here)

**

RADIO AND THE LAW: CLUBS AND THE FCC

Still with legal issues, for a group to be eligible for a club callsign, the FCC has four criteria thar must be met. It says that a club must be made up of at least four members, have a name and legal document of organization and a primary purpose of being devoted to Amateur Radio activities consistent with FCC rules. But do you know how many of the members of a radio club need to hold ham radio licenses?

These and many other questions are answered by former FCC rules Chief John B. Johnston, W3BE, in an article titled "What Is a Club"

appearing in the just out December issue of Worldradio Magazine. And filling close to two pages, Johnston explains in great detail the recognition given clubs by the regulatory agency and the rules regarding club call signs.

If you have ever had questions regarding radio clubs and their dealings with the FCC, this is the tell all definitive article you have been waiting for. More about subscribing to Worldradio and sample issues is on-line at www.wr6wr.com

And less we forget, the answer to how many members of a radio club must hold a valid FCC issued ham radio license is only one. The rules say that at least one member must have an operator and primary station grant from the agency to apply for a club station license. (Worldradio)

**

RESCUE RADIO: US COAST GUARD AUXILIARY SEEKS RADIO AMATEURS

The ARRL Letter says that the U-S Coast Guard Auxiliary is looking for Amateur Radio operators or prospective amateur licensees. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

Wayne Spivak, KC2NJV, is with the Coast Guard's National Public Affairs Department. He says that because the service operates every day, in good weather and in bad, that the U-S Coast Guard Auxiliary is on the air whether there is power to operate or not. And at times like these, the Coast Guard and the Auxiliary rely on the Auxiliary Net as a backup radio network. In areas with a large U-S Coast Guard presence, the AuxNet operates in both a support and backup capacity. More important, in regions where there is no regular Coast Guard presence, the Auxiliary may rely solely on its AuxNet for communication.

And because of this, Spivak says the Coast Guard Auxiliary is seeking ham radio volunteers. He says that this is because amateurs are good communicators. That they have developed both in everyday radio operation and participation during emergencies through RACES, ARES and SKYWARN.

Spivak believes that Amateur Radio and the U-S Coast Guard Auxiliary are an ideal fit. He says that the US Coast Guard Auxiliary is open to all US citizens over the age of 17. A security background check, paid for by the US Coast Guard, is required before an applicant is accepted. If you are interested in expanding your public service horizons, please visit the US Coast Guard Auxiliary Web site. Its in cyberspacw at www.cgaux.org. Again, that U-R-L is www.cgaux.org and I'm Bruce Tennant, K6PZW, reporting for the Amateur Radio Newsline.

--

A direct link to the U-S Coast Guard Auxiliary application webpage is at http://www.cgaux.org/cgauxweb/getzip.html (ARRL)

**

RESCUE RADIO : MARITIME MOBILES SERVICES NET NOW STREAMING AUDIO

The sound of the daily Maritime Mobile Service Net can now be heard in streaming audio on the Internet.

The net meets daily on 14.300 MHz between 16:00 UTC and 03:00 UTC. The audio streaming originates from the receive site of W-L-O Marine Radio in Mobile, Alabama using a Japan Radio Company N-R-D 535 D receiver fed from a T-C-I ground mounted loop antenna.

As with any streaming audio on the Internet, there will be an inherent lag from the time its encoded in Alabama and when you hear it on your computer. In this case the delay could be anywhere from 4 seconds to 1 minute, as compared to live on-the-air audio.

Because of this, this streamed audio is not meant to be used to control the net. Rather, it is intended as another means for non hams to listen to the net, family of boat crews to listen for the boat and a way to monitor the net when you are away from the radio or when you have no propagation to hear the net control station.

You can hear the streamed audio daily when the net is in operation. You will need a media player like Winamp or Real installed on your computer. Simply take your web browser to www.mmsn.org and click on the yellow icon that says "Listen Live." (MMSN)

**

ENFORCEMEMT: CBS PROTESTS JACKSON WARDROBE MALFUNCTION FINE

Viacom Corporation, the parent of the CBS network says the FCC's proposed 550-thousand-dollar fine for Janet Jackson's Super Bowl "wardrobe malfunction" is "entirely illogical." Viacom says neither it nor anyone at CBS knew Justin Timberlake would yank off a piece of Jackson's black leather top.

The move exposed Jackson's right breast for less than a second, but generated a-half (m) million complaints to the Federal Communications Commission. The fine is the largest ever imposed against a T-V outlet. Viacom is seeking to have it rescinded and has indicated that it will fight the matter in the Federal courts. (Published news reports)

**

ENFORCEMENT: WLFK-LP ADMONISHED FOR BROADCASTING ADVERTISEMENTS

Low Power FM stations are prohibited from broadcasting advertisements by the Communications Act of 1934 and by the FCC's own rules. And
doing so has brought a letter of admonishment to a Wisconsin based LPFM station.

This hand-slap went to WLFK-LP and is looked at as a fair warning to all Low Power F-M stations not to broadcast commercial

advertisements. A letter of admonishment carries a warning to cease and desist but no punitive action such as a fine. More is on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-3555A1.doc (FCC)

**

TELECOMMUNICATIONS LAW: SPAMMER BOUNTY SUGGESTED BY FTC

The U.S. Federal Trade Commission has given its endorsement to a plan that would reward insiders for information leading to the arrest and conviction of people or companies that produce spam. In a recent report the FTC said that some anti-spam proposals, such as a "Do Not Spam" list similar to the agency's highly successful "Do Not Call" list, would not work and could make spam worse. But the agency said that providing monetary rewards for turning in spammers could work in some cases. The FTC is suggesting rewards ranging from $100,000 to $250,000 to turn spammers in. (FTC)

**

SPECIAL EVENTS: PEARL HARBOR DAY COMMEMORATIVES - DEC. 4 - 7

Two upcoming special event stations will be on the air to commemorate Pearl Harbor Day. The first will be operated by the Historical Electronics Museum Amateur Radio Club from December 4th to the 7th using the call sign W2W. Operation will be in the General; class segments of all of the high frequency bands. Further information is on-line at www.qsl.nwt/w3gr or by e-mail to w3gr@arrl.net (Worldradio)

The other operation we have heard about will be one day only on December 7th. This one by the U-S-S Kidd Amateur Radio Club down in Baton Rouge, Louisiana. Look for this operation mainly SSB on 30 meters from 14.250 to 14.320 MHz and C-W near the popular QRP calling frequencies on 40 through 10 meters. More on this one is on the web at www.lsu.edu/brarc (Worldradio)

**

SPECIAL EVENTS: THE BATTLE OF THE BULGE - DEC. 16 - 20

And a bit later in December the Anaheim California Police Amateur Radio Club will sponsor special event station K6B. This, to commemorate the 6oth anniversary of the famed Battle of the Bulge that took place during World War 2. Operation will be on 40 through 15 meters from December 16th through the 20th. For more information please e-mail km6hb@arrl.net. (Worldradio)

BREAK 2

This is ham radio news for today's radio amateur. From the United
States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

NAMES IN THE NEWS: A FLY-IN TO HONOR K9TRG

He served the ham radio community for years, especially in the early days of F-M. And on Veterans Day, Thursday, November 11th, some nineteen hams from around the nation gathered at a restaurant in Suburban Chicago to honor their friend Art Householder, K9TRG, of Spectronics fame.

If you operated F-M in the 1960's or 1970's using radios like a
Motorola 80 D or a General Electric Progress Line, then the name Art Householder and the call sign K9TRG has to ring a bell. Back when F-M was in its infancy, Art was the premiere supplier of decommissioned police and taxi dispatch radios to the growing world of Amateur Radio F-M.

Now retired and in declining health, he cannot travel as he used to. So this year his friends came to the Rose Garden restaurant in Elkgrove, Illinois to spend the day with him.

And the list reads like a whose' who of ham radio including such notables as Evelyn Garrison, WS7A, who came from Washington State and F-M pioneer Dick McKay, K6VGP, of Los Angeles. From the Chicago area ATV pioneer Henry Rue, AA9XW, the FCC's Russell "Joe" Moonie and RAIN producer Hap Holly, KC9RP, were among those sharing the day with .

While the luncheon is held every Thursday, this was notable event for Art because of the number of people who either took time off from work or traveled thousands of miles to attend. And many say that they plan to do it again next year. (KC9RP)

**

RADIO LAW FOLLOW-UP: COURT ORDER ON PET CHIPS THAT CAN'T BE READ

Remember our story a few months ago about a particular pet identification transponder chip that were not compatible with most scanners in use in the United States? Well, it took some time but a judge now barred a company from selling or advertising these microchips.

The preliminary injunction from San Diego Superior Court Judge William C. Pate yesterday blocks several named defendants from

selling or advertising its unit called "Recovery Chip," If and when the company wants to resume selling or promoting the Recovery Chip product, the court must first approve the company's proposed advertisements. Also, any new ads must disclose that the Recovery Chip cannot be read by the majority of microchip scanners in U.S. shelters.

Banfield, the Pet Hospital has been the U.S. distributor of the particular per I-D chip. It is based in Portland, Oregon and operates in Pets Mart stores throughout the United States. Banfield voluntarily suspended microchip sales in early May, before the lawsuit was filed, and has no immediate plans to resume its microchip program. (Published news reports)

**

EMERGING TECHNOLOGY: FREE WIRELESS INTERNET ACCESS IN VAN NUYS CA

A pilot program to provide free wireless Internet access in part of Los Angeles began on October 29th. This at the Marvin Braude Constituent Services Center in the suburban of Van Nuys. During the six-month program, anyone in the area will be able to use a wireless-enabled notebook computer, P-D-A or other mobile device to access the Internet. The high-speed access will be available in the outdoor plaza, along Van Nuys Boulevard and in public meeting rooms and service counters in the building. (Computing)

WORLDBEAT - BELGIUM: QRP POWER TESTS ANNOUNCED

Sunday November 21st, , December 26th and January 16th are the dates announced of the second Belgian U-B-A 'Candlelight Tests." In these tests, several stations transmit simultaneously on 80, 40 or 30 meters running micro power levels ranging from 100 milliwatts down to 5 milliwatts. The challenge for participating amateurs is to copy the code words embedded in the transmitted messages. Full information is on the U-B-A website. A link to it appears ay www.uba.be/actual/candlelight/candlelight_en.html. (GB2RS)

**

DX

In D-X, PF5X, informs the Ohio Penn D X newsletter that he has received his license from the local authorities in Singapore. Also that his station was inspected and approved for active usage. His callsign is 9V1CW, and Enno says that he will be in Singapore for about 3 years. All QSLs via PA0KHS direct or via the bureau. (OPDX)

And word that N3SIG has been redeployed to McMurdo Station in Antarctica. Chris says that he expects to be there until March 5th. Thats the good news. The bad comes in a report that says the ham shack's antennas there were destroyed, and there us also damage to

the main HF rig. So he plans to hand carry a HF rig from his home in Pennsylvania to Antarctica. When he arrives, Chris says that he will construct a dipole and will be on the air as N3SIG stroke KC4. Listen for him mainly on 14 dot 243 MHz which is the unofficial Antarctica ham radio calling frequency. (OPDX)

Lastly, a real rare one with word that Christmas Island as VK9XG will be active from the 22nd of November until the 8th of December. The station will be operated by W0YG and W0MY and will be operational in the CQ world wide CW contest plus a much-needed RTTY activation on 40, 80 and 160 meters. QSL this one as directed on the air. (OPDX)

**

THAT FINAL ITEM: THE BAGDHAD REMOTE BASE - REVISITED

Two weeks ago we reported that former 73 Magazine Editor Keith Lamonica, W7DXX, had arranged for the installation of a remotely controlled transceiver in Baghdad, Iraq. A transceiver whose functions could be controlled by hams world wide over the Internet.

Well, that announcement by W7DXX has created quite a stir in ham radio circles because of the armed conflict taking part in that nation. This has resulted in many questions from the ham radio community that Lamonica recently addressed in an interview with Rain's Hap Holly, KC9RP. W7DXX says that some hams don't spend the
time to read whats in front of them:

--

Lamonica: "There has been a lot of activity, especially on the qrz.com site about the operation and people just don't take a breath and sit back and read the instructions. We have outlined everything that should satisfy anyones curiosity, but you still have people that just put their blinders on and go off to make wild statements."

--

Lamonica has lots more to say about the Baghdad remote and other uses of the Internet by ham radio. You can her it all on this weeks RAIN Report. Its on line in streaming audio at www.rainreport.com or on your phone at 847-827-7246. That number is easy to remember as 847-827-R-A-I-N. (ARNewsline(tm), RAIN)

# 2946. Listening to NYC AM near Washington D.C.

Newsgroup: rec.radio.broadcasting
Date: 2004-11-20 16:35:04 UTC
From: jmhiggins@gmail.com
Message-ID: <cnnrno$6ln$1@xuxa.iecc.com>
Source record: 3489

Get my friend out of his car!!! He's a lifelong New Yorker who has moved to Gaithersburg, MD, a bit NW of Washington, D.C. He's a diehard fan of NYC sports talk station WFAN (not streamed on the net), 770 Am. He can get it on his car radio, but not in the house. So he'll sit in his driveway at night listening to The Fan. Obviously, he's got a better antenna in the car. So how can I help him put a good AM antenna in his house??? I've seen the C Crane site, and a Terk unit or two. I'm not terribly interested in a homebrew solution.

I've considered setting up an audio server here in New York so he could tap in, but that's another discussion.

# 2947. Scripts & Scruples - Internet Radio Soap Opera

# 2948. Radio tower jump kills Minnesota man

Newsgroup: rec.radio.broadcasting
Date: 2004-11-20 16:35:06 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cnnrnq$6md$1@xuxa.iecc.com>
Source record: 3487

Forum staff report, The Forum
Friday, November 19, 2004

Township of Somerset, Wis.

A 32-year-old man was killed when he parachuted from a radio tower in this western Wisconsin town, authorities said.

St. Croix County Sheriff Dennis Hillstead said it was foggy and Erich Wagar of Brooklyn Park, Minn., may not have known how close he was getting to the ground during the Wednesday jump.

Hillstead said Wager and a friend jumped from a tower owned by Infinity Broadcasting.

The two jumped from about 940 feet and Wagar's parachute opened, but too late to slow his impact into a hill, the sheriff said.

Eric Lunder, 29, of Hutchinson, Minn., jumped shortly after Wagar, and was not injured, Hillstead said.

From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cnnrnr$6mp$1@xuxa.iecc.com>
Source record: 3486

Nov. 19, 2004
William J. Kole

Associated Press

Prague, Czech Republic

Ronald Reagan used it to reach out to the Soviets during the Cold War. Lech Walesa, the leader of Poland's Solidarity movement, likened it to the sun lighting the Earth. Rock band R.E.M. immortalized it in a cynical hit song.

Radio Free Europe/Radio Liberty is trying to woo new listeners in Russia with a controversial overhaul that former dissidents and other critics contend will compromise its reputation and influence as a beacon of democracy.

"We're becoming just another bunch of blah-blah-blah on the air," Lev Roitman, a senior commentator for the private U.S.-funded station, said Thursday. "They must be idiots to do something like this at this critical time in Russia."

Officials at RFE/RL's football field-size newsroom, housed in Prague's communist-era parliament building - an imposing edifice of black granite circled by heavy concrete barricades and machine gun-toting guards - say they simply want to modernize the programming and expand its reach.

The station's primary target is urban, employed, university-educated Russians aged 35 and up. Key changes include more call-in shows, a Web site overhaul to appeal to the 18-plus crowd, and a shift from longer evening programs on human rights and other issues to shorter, snappier spots aired throughout the day.

Nenad Pejic, RFE/RL's associate director of broadcasting, insists that Russian-language news and programs on human rights will remain a priority and that only the format - not the content - will change.

"It's about our survival, not our mission," he said. "Listeners in Moscow tell us our programming is a little old-fashioned, that we still sound like a dissident radio. We're just revamping. We want to be a local radio with a global perspective."

But the proposed overhaul, a copy of which was obtained by The Associated Press, also includes plans to cut staff and "move the center of gravity to Moscow" by dropping on-air references to Prague to give the impression that RFE/RL is a local Russian station rather than an outsider.

The broadcaster, which gets $75 million a year from Congress, has moved key positions to Moscow and now broadcasts 70 percent of its material from the

Russian capital. Critics say that exposes the station known Radio Svoboda - Russian for "Liberty" - to government intimidation and the threat of censorship.

"If anything similar to the current plans of the RFE/RL management would have been suggested in Soviet times, there would have been no doubt as to the source of inspiration: the KGB," Elena Bonner, the widow of Nobel Peace Prize laureate Andrei Sakharov, wrote earlier this month in an open letter to Western media.

"Can anyone think of a more Cold War-type operation than one that pretends to disguise a radio funded by the U.S. Congress and based in the Czech Republic as a local Russian radio?" she said, denouncing the plan as superficial and "a stupid gimmick."

Mario Corti, a former RFE/RL Russian service director who now works as an editor, ridiculed the station for basing the changes on recommendations by a U.S. consultant recently hired to create an internal music channel for the Starbucks coffee chain.

"The rationale for some of the changes is reasonable. But how can you establish credibility when you're misleading people?" Corti said. "We're a paragon, perceived to be independent because we're a foreign station that doesn't belong to the oligarchs. We had something unique. Now we're becoming like everyone else."

RFE/RL, whose 600 employees and network of 3,000 freelancers were overseen and funded by the CIA until 1971, now answers to the Washington-based Broadcasting Board of Governors. Besides its transmissions to the former Soviet Union and Eastern Europe, which are rebroadcast by affiliates to far-flung regions, it also airs broadcasts in Iran, Iraq and Afghanistan.

Masha Klein, who heads the Russian service, conceded RFE/RL's journalists in Moscow "have been under pressure for years," but said the station is prepared to shift staff back to Prague if Prime Minister Vladimir Putin's government interferes.

She said the revamp sprang from the perception that the station nominated in 1991 for the Nobel Peace Prize is foreign, aloof and run by Russian dissidents and expatriates "who hate Russia" and spout American propaganda.

"I'm Russian, and I dearly hope the day will come when our services are no longer needed," she said. "But I don't see that in the near future. The Russian people still need us."

# 2950. For sale: Partial interest in LPTV CP in small GA market.

Newsgroup: rec.radio.broadcasting
Date: 2004-11-20 21:01:42 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <cnobbm$bpq$1@xuxa.iecc.com>
Source record: 3492

For sale:

(The "Radio Crazy" is baaaakkkk!!!)Hi!

Partial interest in LPTV CP (Channel 38)in small
Georgia market. 50,000 watts ERP on main lobe.
Directional antenna. Full asking price and insanely
reasonable $10,000.

This is a joint venture. There is an element of risk
and you could lose all or part of your investment.

Active or inactive investors with at least $2,500.00
each are welcome.

All investors would be on the board with full voting
rights if desired.

The FCC is eventually going to force all TV stations
higher than channel 51 to get off the air or change
channels. Note that this CP is below channel 51 so
will not suffer that issue.

I have seen the FCC coverage map and the proposed
application puts a grade "A" signal over the entire
city of license and then some.

Call (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV
aka: The "Radio Crazy"

>Hello.....NG
>Does anyone know anything about the Optimod 8000A...?

It's a multiband compressor combined with a multiplex stereo generator.

>Anyone still use it ...?

Some stations still do. If you aren't hitting it hard, it's fine for a station that isn't trying for extreme loudness. The 8100 gives a little bit better modulation but not by all that much.

>Can it be used for recording...?

Not really, because the output is a multiplex composite signal.

>Ruff....value these days....?

I dunno, call one of the used equipment brokers. Harris-Allied's guys always have some in stock. They are pretty common.

Why not? A longwire antenna will beat any of the active antennas hands down.
Problem is that it may be so good that you'll find yourself needing a more
selective radio.

If the friend lives in Montgomery Village, Gaithersburg, outdoor antennas
are prohibited, so it would have to be a stealth one. All of the
subdivisions started in Montgomery County in the past 45 years forbid
antennas, to the best of my knowledge.

That said, I'd certainly try some sort of wire antenna even indoors or
temporarily outdoors before going the Terk/etc route.

Is the friend in an apartment? Does it have a balcony? If in a house, does
it have a deck, a wooden fence, even a short one? What sort of "indoor"
receiver does the friend have?

It's probably not the antenna. Signals are plenty strong at night. More likely
selectivity of the receiver.

The Sony 7600GR on sale at Bennett Bros for $109 is a great deal, with really
high selectivity (owing hugely to sync detection and selectable sideband) for
the price; and you get shortwave too.

http://cyg.bennettbrothers.com:80/bluebook/product.asp?catalog%5Fid=1&product%5Fid=22520&member%5Fnum=

Want to use it (or any radio) also _in the daytime_ out to hundreds of miles range on the AM band?
Get a passive MW loop, say the Terk loop, to set beside it. It's a tuned circuit, a big coil and
a variable capacitor is all, that matches the impedance of the internal loopstick antennas in AM
radios to free space, letting you in most radios hear right down to the propagating noise level;
which is the best you can do with any small antenna.

This matters only in the daytime. At night, all the AM band signals are strong; there's too many of them, is the problem then.

In the daytime, D-layer absorption soaks them all up leaving only groundwave signals, which are
genuinely weak.

Probably you can only hear the FAN at night from DC, though I don't know. I've heard it at noon
in Central Ohio http://rhhardin4.home.mindspring.com/wfannoon.ra

A little #22 magnet wire under the eaves will do an amazing job and nobody
will ever be the wiser. I did this in apartments and college dorms for
years for receiving and transmitting. I had a 40M dipole with trap coils
between my balcony and two adjacent buildings even, once.

Hi Folks:

I'm in need of a link to an inexpensive adapter to use a consumer unit in limited broadcast service. Most of the ones I've found on a Google search are worth twice the cost of the cassette machine it will be attached to. Since the fidelity of cassettes isn't all that great, the specs on the line driver need not be super-fabulous.

A kit is fine too. Any suggestions?

Thanks for the opportunity to pick your brain.

Regards,
Lee

The future of shortwave will be spotty. Broadcasts to developed countries in North America, Europe, and Japan/South Korea will be a thing of the past because of satellite media. Some shortwave receivers are cheap, compared with satellite receivers, and will be still be used in the third world. As long as governments and religious groups want to convey their messages to these people, shortwave will still exist. For North Americans, the dx possibilities will be amazing. With high powered stations beamed away, it will be easier to get unusual broadcasts.

My pal would probably listen to that, static and all.

I'll check out the Sony and help him play with antennas. I understand his pain....should a longwire be any particular length for an AM station at 770??? And is this one of those "yeah, a mile and a half" issues??? My friend does have a house with a fairly good-sized yard...

I think this could happen, though I suspect that when a certain 'critical mass' of major broadcasters leave shortwave, the resulting vacuum will draw in others or perhaps convince some, who earlier shut down, to start up again. But whatever happens, I think there'll always plenty of interest to listen to on shortwave....unless broadband over powerlines completely destroys everything.

I am looking for TV and radio broadcasts of the JFK and RFK assassinations. I am particularly interested in audio recordings of such broadcasts made by amateurs.

If you personally tape-recorded -- or know of anyone else who tape-recorded -- any television or radio broadcasts concerning one or both of the two Kennedy assassinations in 1963 and 1968, please contact me.

Whether it's a network or local broadcast, whether the sound recording of that broadcast is of good quality or poor quality, whether it was recorded in a major market or in a minor market, I want to know about it.

I'm a collector, so if you have any of this or know about someone else who does... please email me or have them email me at:

bkj333@aol.com

Thanks!

The possibility of having to learn another language is very real. I
see radio being used to cover large areas which are not profitable to
wire for cable and phone. Many parts of South America, The Middle East
and Asia come to mind. There are many more sub locales, I'm sure.

The use of the major European languages will continue to decline,
Spanish excluded.

I suggest that without the big name broadcasters to draw folks to broadcasting, there will be lesser listenership and less reason for dx stations to remain on the air. Broadcasting is expensive as all getout, especially for poor countries. The justification for reaching listeners outside said poor country is slowly fading away and with the internet, cd distribution and the like, the need to listen to shortwave for music and entertainment is slowly fading away too.

I'ld love to see SW broadcasting remain, I'm not always near an internet connection and all too many of the SW broadcasters I used to regularly listen to, now have skimpy or no signals with me using better receivers than I even dreamed about when I first started listening years ago. I just don't see it continuing for long.

Interesting question. Suppose with some of the bigger powerful stations out of the way, we might hear some of the quieter ones that we never could before!

That would be something good coming out of something bad!

Probably a large part of his problem is that WFAN is on 660, not 770. ;)

He should try a GE Superadio or a Tecsun BCL2000
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5733726786
I prefer the Tecsun because of the digital readout and better wide/narrow
filters than the GE. Both do amazingly well with no external antenna. Bbut
both also have external antenna inputs, with which you can try anything
from long wire to the C Crane twin-coil antenna

I think you might be right -- provided someone doesn't create a lot of static for the SW spectrum. This is what some predict concerning broadcasting over the power lines, whatever that is called. (Man, the "senior moments" are something! ;-) )

Hey Scott, do you know a place where I could get simple instructions for an AM loop antenna for a modulation monitor? I have a surplus TFT 713 and would love to use it to pick up 630 WMAL at home. Belar wants $345 for one of their circular antennas but I'm sure I could build one cheaply with some PVC, wire and some caps, right?

The evangelists will be on shortwave as long as they think there are a few people out there listening to SW radio. As government and commercial concerns lose interest in SW, it's conceivable that others will fill the vacuum with inexpensive pirate operations based on ham radio gear.

Monday November 22

LONDON and WASHINGTON, Nov. 22 /PRNewswire/ -- WorldSpace, Inc., the pioneer of direct satellite delivery for digital audio radio services (DARS), successfully demonstrated today Data-casting and IP Multicasting capabilities at the Global Military Satellite Communications Conference being held in London. The demonstrations are being conducted using live data transmitted in near real time using the WorldSpace AfriStar satellite over the west beam.

(Logo: http://www.newscom.com/cgi-bin/prnh/20040319/WORLDSPACELOGO )

With the new Data-casting and IP Multicasting capabilities service, clients can up link their existing content to a WorldSpace satellite where it is down linked to inexpensive transportable receivers containing small built-in 4-inch dish antennas. The receivers, designed and mass-produced exclusively for WorldSpace, contain data ports that enable direct transmission of data and audio content to computers. Through this service, clients anywhere within the coverage area will be able to listen to live audio discussions combined with a slide show on various topics, thus stimulating a 'virtual classroom.'

"We are excited to have the opportunity to showcase our services at such a respected gathering of global military satellite communication experts," said Noah Samara, Chairman and CEO of WorldSpace, Inc. "The WorldSpace Data-casting and IP Multicasting system will allow clients to reach vast new audiences where traditional radio, or Internet services are either limited or not available. Potential users will find that our system provides dramatic efficiencies over using two-way systems for this broadcasting type use."

About WorldSpace
WorldSpace is the pioneer of direct satellite delivery of digital audio radio services and serves Asia, Europe, the Middle East and Africa. Through its subscription-based service, WorldSpace broadcasts news, music and educational programming to a global service area that includes more than four billion people and targets its programming to consumers, governments, and other organizations. The company leverages its two geo-stationary satellites, AfriStar and AsiaStar, and its ownership of broad spectrum licenses to deliver more than 100 digital quality audio channels per satellite as well as multimedia content directly to portable receivers. Headquartered in Washington, D.C. and with offices in Europe, Asia, Australia, the Middle East and Africa, WorldSpace is led by a seasoned management team with deep radio, international broadcasting and communications experience. For more information, visit our website at

http://www.worldspace.com.

Saturday, 20 November 2004

Listeners in the United Arab Emirates will have the opportunity to hear a wider range of BBC World Service programmes when two FM relays revamp their schedules to include BBC programmes in English.

Starting Sunday 21 November, the 90.3 FM frequency in Abu Dhabi and the 87.9 FM frequency in Dubai will broadcast nine hours of BBC English programmes between 09.00 and 18.00 local time.

Listeners will continue to receive a further 15 hours of programming in Arabic on both frequencies.
Jerry Timmins, Head of the BBC Africa & Middle East Region, BBC World Service, said:
"I am delighted. Thanks to this development, listeners can now hear for the first time the full range of BBC programmes in English in crystal clear quality in addition to the BBC Arabic programming."

Listeners in Greater Dubai, Sharjah, Ajman and Umm al Qaiwain can now receive a wide range of BBC programmes in English from health and sport to business and music.

The BBC Arabic service has more than 13.5 million listeners in the Middle East and North Africa and can currently be heard on FM in Bahrain, Iraq, Jordan, Kuwait, Qatar and Sudan.

The Internet being the end of short wave is an old refrain. I have not
tried streaming news from the BBC web site lately but in the past it has
been just terrible and I have a DSL connection. Audio and video was full
of artifacts and slow. Audio from the BBC sounds much better over short
wave than over the Internet.

So get a used one. Bump-boxes show up all the time with the used equipment
suppliers.

Or get a console that can take a consumer level input. Most broadcast
consoles do have some trim resistors that can be swapped out to change
the nominal input levels.

The Toys for Tots should be fine with just a long wire attached to the
input. The loop antenna will have lower gain but higher directionality.
The real deal with the loop antenna, though, is that the gain on it is
calibrated and you're paying for the accurate calibration of a measurement
device. You don't want a measurement device, you just want as much gain
as you can get.

>Dave Sproul, Bethesda. MD

Since Hardin and Weaver are gone, there's no reason to listen to WMAL. But I am
up in your neck of the woods on a monthly basis if you want to bring it over
and try it with a wire.

>What do you think?

I think that unless the FCC starts actually enforcing Part 15 regulations
for a change, that QRM is going to be more of an issue in the future than
interference from the powerhouse shortwave stations.

I also think that MW DXing is either going to be dealt a huge blow from
IBOC, or it's going to be considerably improved by the stations reducing
channel bandwidth in preparation for IBOC. It's certainly going to change.

But, much as we are disturbed by the impending implementation of BPL, it
is no worse than many other interference sources which are currently illegal
and about which the FCC does nothing. These problems will just continue
getting worse. Touch lamps a mile away are clearly audible on 80M here.
Now imagine that multiplied a millionfold in an urban area. You think
Wal-Mart cares that they are selling products that don't meet FCC regulations?
You think the FCC even cares?

>The whole point is that these are NOT court-ordered fines, only administrative penalties that can only be enforced by whining to credit agencies or witholding licenses-wait a minute, WHAT license?<

Wrong. The FCC has several means of collecting fines:

1) Withholding action on any or all applications of the licensee pending before the Commission until any outstanding fines are paid.

2) Turning unpaid fines over to the US Attorney having jurisdiction over the fined party's last known address.

3) In turn, the US Attorney can obtain a court order attaching monies or assets sufficient to pay the fine.

>Even CRIMINAL fines imposed buy federal courts statistically go 90% uncollected.<

Proof?

Source record: 3425

Some thoughts on the future of shortwave broadcasting:

1. Internet over power lines (BPL) is a stillborn technology, arriving ten years too late to have any impact. The explosion in broadband connectivity is already here, and it's a wireless future. I'd be surprised if the technology lasts more than two years, with only minor rollouts in rural areas. The nail in the coffin will be subscribers losing their connection every time Joe CB'er down the block keys up. I don't see BPL noise as a factor in shortwave's future prospects.

2. One by one, the industrialized nations will find the internet a neater, cheaper way of reaching their target audience, and their shortwave operations will end, except for

3. DRM, digital broadcasting over shortwave. This broadband technology cannot continue to co-exist on the same bands as analog broadcasts or services (just listen how Deutsche Welle's DRM sender trashes the entire 3950-4000 kHz sector of the U.S. 75 meter band). I don't see DRM as becoming a major player in world broadcasting, because a) the proprietary nature of the technology will impair its proliferation in cheap encoders and receivers, and b) satellite-delivered radio can provide a more stable, more dependable, higher-quality signal to most corners of the globe.

4. More and more antiquated shortwave transmitters - many installed during the colonial era - will break down, and become a low priority for repair, because...

5. FM (VHF) coverage will continue to increase in the developing world, negating the need for regional shortwave operations.

The "DX targets" all of the above will leave will be:

6. Clandestine broadcasters, targeting strife-torn areas where the broadcasting infrastructure is impaired;

7. Intermittent pirate "broadcasters;" and,

8. Religious broadcasters, who will snap up fire-sale equipment and airtime and pretty much take over the international broadcast bands.

10. Eventually, world regulatory agencies and the ITU will examine the state of international broadcasting and see that it has turned exclusively into a fundraising tool for bible thumpers. At this point, they will be hard-pressed to justify maintaining the valuable spectrum allocations for shortwave broadcasting. All of the current shortwave broadcasting bands will shrink to 100-200 kHz apiece, and some will vanish altogether, as the worldwide demands for digital data spectrum increases.

11. Our lovely shortwave radios will end up in the same junk heap as 8-track players, becoming collectable antiques in 75 years or so.

Al Q.

>From the beginning of next year Luxemburg will run DRM transmissions on 1440 kHz. No clue, at what hours, I suspect, that they will use it during their own programming only and if the clients renting the transmitters want to use DRM. Let's hope, that at least they switch off the beast at nights.

I'm pessimistic concerning the future of MW-DX, I'm afraid that next year at this time we'll see a lot of channels occupied by DRM and reduced chances for TA reception.

I don't have a problem with DRM on shortwave, it's a nuisance, but I think, we DXers can live with it. But on MW DRM is absolutely lethal.

Right. The best possible antenna is HIGH, CLEAR and LONG.

#22 varnished wire is easy to get (scavenge a yoke from an old TV set)
and very convenient for the job. It's thin enough and colored well
enough to be almost invisible.

There is a discussion of this in The Boy's First Book of Radio and Electronics.

I have up for sale or trade a Bext Frequency Agile FM Exciter. this has
been gone over and refurbished to factory spec's. I put in a new crystal
oven and replaced some of the old IC's in the oscillator with updated
components. I have a maual for this exciter. the exciter is variable from
1watt to 15watt. this is completely agile via front switches and required no
tuning internally. I am asking for 1300.00 + shipping or will consider
trades for some Hamilton AM1000 Rangemaster Part 15 Transmitters and some
LPB or Radio Systems carrier current equipment and couplers.

Thank You,

Meaning what, that it will have a small niche market? I doubt it. ISDN actually had broad appeal back in the days before DSL and cablemodems - I used it for a year or two myself. It was still used widely in Europe for some time after DSL and cable became commonplace here. BPL won't be that popular. BPL probably won't even manage the small niche that I believe you're referring to. It's just too late in the game.

I'm with you and Steve on this. BPL has already been tried and failed in a number of other countries; at least one pilot project here in the U.S. has already failed as well. Interference to/from amateurs is occasionally cited as a reason but IMHO if the BPL operators felt they could make money, the regulatory agencies would see to it the amateurs went away, not the BPL.

> 2. One by one, the industrialized nations will find the internet a neater,
> cheaper way of reaching their target audience, and their shortwave
> operations will end, except for

I've my doubts the Internet will be a real viable replacement for all shortwave anytime in the near future.

For those broadcasts intended to reach a country's citizens abroad, yes, the Internet is probably a more economic solution. Likewise, for those intended to reach an audience of foreigners in a developed country.

The Internet is more easily jammed (the Chinese are already doing so on a nationwide basis) and it's far easier to monitor what people are listening to. It will not, with current protocols, replace shortwave for reaching audiences in countries where the government would rather they weren't listening.

Computers may be cheap, but they're still a LOT more expensive than a cheap radio. In isolated areas a reliable Internet connection with adequate bandwidth might be an even bigger problem. (heck, at my location - within 30 miles of Nashville - internet audio is problematic due to my connection) I don't think the Internet will in the near future replace shortwave for reaching audiences in sparsely-populated and poor countries.

Of course, that does mean that secular broadcasts directed at rich free nations are likely to go away. Listeners will have to develop new skills to pull out the weak stations beaming their signals to far away parts of the world -- and to identify the broadcasts in exotic languages. Won't be much English - or for that matter, Spanish, French,

German, or Japanese - left.

Don't really see much demand for spectrum for data on shortwave. (VHF &
especially microwave are a different story!) It's not easy to reliably
transfer significant amounts of data over shortwave; SW transmission
will be very much a last resort. So many of the point-to-point users
have shifted to satellites. I think the allotments will largely stay
put. I could even see a point where the FCC concludes a segment could
be opened for "amateur broadcasting", where "pirates" could operate
legally as long as they keep their power down to a reasonable level.

It is an old refrain, and I don't understand it. If you ask every SWLer why they listen to news via shortwave, how many of them would say, "Because it's not available over the internet"? Few if any, I suspect. People listen to the news via shortwave because they like listening to shortwave and like the news services that shortwave makes available. Period.

I'd also like to point out that I returned to shortwave listening after being away from it for many years. Why did I return? Because of shortwave related information that I came across ON THE INTERNET! And indeed, it seems to me that the internet could be the best thing that ever happened to ham radio and SWLing. We, and the organizations that represent us, just have to USE the internet to educate people about our fascinating hobbies. If you put the information out there, people will be drawn to it. That's just the way it is.

It seems to me that the internet could be precisely the thing that saves SWLing!

In Europe, ISDN came in early, was adopted very quickly, and was very reasonably-priced compared with the alternatives. In the US, the pricing schemes were outrageously expensive and most of the telcos either did not have it available or didn't even know what it was. As late as five years ago, I went around with GTE for two months trying to get an ISDN line for a local voiceover studio.

In the US, ISDN was a flop because it was too expensive, too slow, and too late to market. If it had become available as quickly as it had in Europe and as universally, it would have been very popular. But it wasn't.

I gather these are the issues with BPL... it's not anything that you can't get better from other services that have been in place longer.

But how about WorldSpace satellite radio? They
have a couple of dozen channels with coverage of
Africa and Asia and much of Europe. They even
carry different services on the various spot beams
from a single satellite. I gather they rent some
space to national broadcasters. Their receivers
aren't dirt cheap, but well within the means of
many people in the third world. I gather that they
are NOT doing well financially, however. They have
a web site www.worldspace.com . There was some
initial relationship between them and XM, but
WorldSpace's partial foreign ownership killed that
from what I heard..

Wed 24 Nov 2004

An Edinburgh radio station has been named Britain's best student station at a national awards ceremony.

Fresh Air FM, which is run by students at Edinburgh, Napier and Heriot-Watt universities, was handed the prestigious award by judges from the Student Radio Association. The victory means that the group can now host a special programme on BBC Radio One this Christmas.

Kate Lorimer, a spokeswoman for the station, said: "We are proud to announce that we are now officially the best station of 2004, after beating off challenges from Warwick University, De Montefort University and Southampton University.

"This is a huge achievement for Fresh Air. After financial troubles held the station back for two years, we are riding high on a successful broadcast in April of this year.

"This is not only an award for the students involved, but also illustrates to the rest of Britain how vibrant the music scene is in Edinburgh and Scotland. We are now able to compete successfully against the major players from England, Wales, and Northern Ireland on the radio waves, and it sets the standard for future broadcasts."

The ceremony, which was hosted by BBC Radio One's Steve Lamacq and Jo Whiley, was held in London last Friday night. There were twelve awards up for grabs, and Fresh Air FM also came close in the best drama category, with its show Bruntsfield Place coming third.

A Student Radio Association spokesman said: "Congratulations to all involved in the station."

Children at Wroxham School in Potters Bar, Herts, will be making the airwaves in the next few weeks on their very own radio.

The radio station was paid for by proceeds from Potters Bar Carnival.

The school will be using the new equipment to help improve the pupils' reading and speech skills.

BBC engineer Jeff Links visited the school last week to show the children how to use the station and it is expected it will be fully up and running before the start of the Christmas holidays.

# 3002. Eastbourne Youth Radio goes on air

Newsgroup: rec.radio.broadcasting
Date: 2004-11-25 09:04:58 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <co477q$ss2$1@xuxa.iecc.com>
Source record: 3440
Cross-posted to: rec.radio.broadcasting,uk.radio

Eastbourne Youth Radio goes live again for the fourth time today (Wednesday).

Each year has seen an expansion of the project, and now, with 65 hours of continuous broadcasting involving 1,500 young people from 27 local schools, colleges and youth organisations, EYR 87.7 FM has become one of the largest and most prestigious annual youth events in the south east.

This is the last time the project will be funded from the Government's Single Regeneration Budget (SRB-6) and next year EYR will be entirely dependent on local sponsorship.

EYR manager, Tim Sorensen, said, 'We've already had fantastic support over the last four years from local businesses and organisations, and those taking part have always contributed as well.

'EYR will definitely go ahead next year, but we now have to find ways of paying for the following years from local resources, if the project is to continue.'

Already, cities and towns throughout Britain have been casting envious eyes on the prestigious project that has delivered a wide variety of educational skills in such a unique and innovative manner.

Last year, representatives from Norwich visited EYR, and this year managed to run their own highly successful youth radio, copying the Eastbourne model.

Government education advisors are also known to be extremely interested in the way EYR has motivated young people in Eastbourne.

Mr Sorensen said, 'Eastbourne has led the way in showing the rest of Britain ways of engaging young people in their community in an exciting and original way.'

Eastbourne Borough Council, recognising how EYR so effectively engages local young people in community issues, has given the station special funding to deliver the youth view on plans to regenerate the town centre, as part of its statutory consultation process.

This has firmly given EYR for the first time an official place in local government affairs, alongside that already given to local newspapers which are paid to carry planning applications.

The programme schedules on these pages are the best witness to the rich variety of ideas local young people have come up with in creating this year's programmes.

This year sees an increase in live choir music, live drama, and, with a general election expected next May, a greater interest in politics and local affairs.

# 3003. Does commercial radio has a future?

Newsgroup: rec.radio.broadcasting
Date: 2004-11-25 09:04:59 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <co477r$ssg$1@xuxa.iecc.com>
Source record: 3441

November 24, 2004

Got an email from a friend, asking me what I thought about commercial radio. What I like, dislike? How they can attract a following? Can they? What's the future?

I asked if I could reply in the form of a post... here it is... I don't call it commercial radio, I call it McRadio:

...the Alt Rock station in Albany plays the same songs by the same artists as the Alt Rock station in Wichita. Just like a burger at McDonalds, radio has become packaged and predictable.

The reason for this is well known, the radio stations are essentially bought and paid for by the record companies through what is known as Payola. So, they aren't in the business of helping you and I enjoy music, they are in the business of making money... at the end of the day, organizations have to make money to stay in business, but if that is all that they care about, they will need to figure out a way to do without relying on people listening to the radio, because I don't think that the scheme will be available in 10 or 20 years.

Let me explain... As we all know, the on thing that is certain is that the future brings two things: More Choices and Change.

Today, I have several options for hooking up an MP3 player to my car; from cassette adapters to units that allow me to integrate my iPod into the car - the iPod becomes my personal library of music that I have an interest in. Over time, more and more cars will offer other built-in functionality beyond commercial radio and CD players. Today, plenty of cars come with satellite radios, hard drives, and integration kits for MP3 players, etc. This adoption curve will continue and the technology will improve that is required to enable people to share their music collection among devices (car, home stereo, portable device, etc) and the tools for getting music will improve as well. Imagine the next iteration of public, high speed, wi-fi and and a car stereo with an internet connection: want the new Alicia Keys CD? Download it to your car. When you get home, you can transfer it to your home computer, stereo, etc. Is that realistic? Yeah, all the technology exists to do that today, it will probably be a couple of years before anyone puts it all together and several more years before it is enjoys wide spread adoption, but it is totally possible. Will this be available in 3, 5 or 10 years? Who knows, but it will be available. One example of this is that I can easily stream music to my stereo from my PC today. So, now that I can stream it, why can't I save a copy there if I want?

There might even be something comes before this - and who knows, this might be available to today - imagine a TiVo like music service. Recording a stream of radio and then jumping through it, saving and deleting songs as you go. So what you end up with is an archive of songs you've recorded from radio, building a library as you go. This might help radio extends its lifetime, but this seems like a klunky solution. Now, some people will say that satellite radio is the future and with the narrowly focused channels and the absence of payola, the assumption is that people will be content for a while. I don't agree with this. This is still a push model. Someone else deciding what I'm going to listen to. I don't like that. As things like TV on demand, which is available today, get integrated into our lives we will be less likely to put up with someone else dictating when we have to listen to something.

Can radio overcome this uncertain future? Can they build audience loyalty? In short, NO. I think they have something major working against them: You can't be all things to all people, which is what they are relying on with a push model.

Now, I think that radio needs to better understand what people want. Some radio stations will exist longer than others, there will always be demand for Top 40 or news, those stations will last the longest - regardless of the underlying technology infrastructure delivering the music (satellite, etc). But the radio stations that want to be in business 10 years from now will need to better understand how consumers choose music. Let me give you an example, we just got a new radio station in my area - Smooth Jazz 92.7, they play (shockingly) smooth jazz (FULL DISCLOSURE: I know one of the DJs). It isn't that I like or even know half the artists on the station, but the music is essentially all the same and I know how I will feel when I listen to it, actually, they've transcended "genre" and they're offering "mood". The radio station that can do that, does have a future, albeit a short one. Genre can be all over the map, mood is a much better programming method. If a radio station decides that they will go this route, they'll have to understand that they will give up listeners because not everyone will be in that mood all the time (yikes, did I just write that?). For instance, I listen to the Jazz station mostly in the evening, when I'm reading, etc. When I'm driving to work, for instance, I don't want to listen to Stairway to Heaven - I want Master of Puppets. On the drive home however, I want to know about traffic and Master of Puppets isn't quite right... perhaps some Jeff Buckley or Alicia Keys.

Think about it, radio stations program their music by genre, but most peoples CD collection is all over the map. Right? Our CD collection, currently around 400, is so diverse and eclectic that it defies categorization. Sure, there are some CDs of mine that my wife will never listen to... and some of hers that I will never, ever listen to, but it is all over the map - from ABBA to Zebra - and there is probably no radio station in the world that has played songs from both of those artists. Wow, I sort of went all over the place on this one...

So, do you think that commercial radio has a future? What can they do to build loyalty?

(A) ISDN was faster than dialup - no one (hopefully) is claiming that it was meant to replace leased lines.

(B) Yes, ISDN was expensive in some places. In Ohio we got lucky. Business ISDN was tarriffed per minute, but you could get residential for as little as $37/month for 75 calls/month (metered access, 8c/call after that) or about $45 flat rate.

And I still maintain that ISDN was more useful for that time period than BPL will be now.

I figure Bible thumpers have about 4 more years before any action
would be taken to auction off the International spectrum we regulate.
Not sure how you auction International property. There's too much to
be paid back to these large political contributors and they tend
(while claiming to speak for God) to claim Neo-Conservatism as the one
true religion.

Unless Haliburton needs it for Iraqi oil theft operations, you can
consider it safe for a while longer.

> has become packaged and predictable.

What is unusual in the idea that all Americans would like the same songs within a particular genre? You are saying taht ER or West Wing or CSI should only be run in one city, because running them on a network is predictable? Gimme' a break.

Go back to the mid-50's. One of the popular TV shows was a top 10 countdown, with a group of 4 singers who sang "covers" of the weeks's most popular songs. So, going back 50 years, there was nationbal consensus in the hits in different types of music.

An no one listens to an FM in Albany and then switches to one in Wichita. Your comparison is without validity.
>
> The reason for this is well known, the radio stations are essentially
> bought
> and paid for by the record companies through what is known as Payola.

Payola is a crime. There has only been one indictment for it in the last 10 years, since it is so serious. And one station, in upstate NY, fired their PD last week for suspicion of impropriety with a record company. All group broadcasters have a severe policy against payola and will fire instantly anyone involved in it.

> So,

> to the radio, because I don't think that the scheme will be available in
> 10
> or 20 years.

You also have the term "payola" totally wrong. Payola only exists if a staff member of a station takes money for play of music without the knowledge or consent of management. Since DJs don't select music at 99% of music stations anymore, this is a moot point anyway... only the PD does, and staions have

safeguards to supervise their PDs.

If a station takes money, it is advertising revenue, but paying a record for play must be disclosed ounder another part of FCC rules.

Anyway, the record companies are in such bad shape due to piracy and dowloading they certainly do not have the ability to influence the $23 billion dollar radio business.

You know, they said the same thing about the 45 RPM record and the cassette. The problem with everything you indicate is that it either takes a lot of time (and thus for only hardcore music fans) or costs money. Radio will be around for many decades.

Arguments based on payola are, by definition, faulty. There is no such practice. In fact, stations spend lots of money to research what listeners want to hear locally. I know of some stations that spend as much as $250,000 a year for this... so that tey will play the songs their listeners want to hear.

This is true. Radi can satisfy well over 90% of the people most of the time. This has been true "forever" since for many decades radio has not been the only music delivery system. Yet in the long run, most people find the free and convenient aspects of radio to be useful in most instances.

Actually, Top 40, which has been called CHR since the 70's, is a tough format. And all news is a shrinking format with very few stations left.

> to it, actually, they've transcended "genre" and they're offering "mood".

That is the whole idea... to create a mood. Otherwise, you are a jukebox or an MP3 player in random mode.

I presume you are talking abot WSJW in Starview (York MSA) which has had excellent ratings increases (more than double) since switching from Oldies in late 2003. This format is highly researched, and the whole appeal is in the blend, just as the same was true for the enormous success of Beautiful Music in the 70's... mood creation, relaxation, stress relief, etc.

> The radio station that can do that, does have a future, albeit a short
> one.

The first smooth jazz station debuted in around '86 or '87 in Los Angeles, and is still top 5 in 25-54, the demo that matters for sales. This is a healthy format wherever it is done, and has true staying power.

> to Heaven - I want Master of Puppets. On the drive home however, I want to
> know about traffic and Master of Puppets isn't quite right... perhaps some
> Jeff Buckley or Alicia Keys.

This is why your radio has buttons and knobs. Eveyone in the US averages 3 to 4 radio stations they make frequent use of, and several more for occaisonal usage. Listeners know where to go at any time for the particulary programming they are in the mood for.

Radio does not set a mood, it complements a listener mood. If I am in the mood for rock (heaven forbid), I know where to go. It is not the station job to change my mood.
>
> Think about it, radio stations program their music by genre, but most

> Wow, I sort of went all over the place on this one...

So? This is why recorded music has one purpose and radio stations another. And I have well over 3,000 CDs, but spend the better part of my leisure time listening to radio, not CDs.

This is pure speculation on my part, but I can foresee a time when the VHF/UHF bands become so clogged with highspeed data that less glamorous operations such as regional/citywide paging, low-rate text messaging, product ID tagging, water meter transponders, etc., go looking for the lower frequencies. Without broadcast QRM, a relatively modest paging transmitter on, say, 6.1 mHz could blanket a 10 mile radius 24 hours with little of the line-of-sight problems of VHF.

>I could even see a point where the FCC concludes a segment could

This would be great, then I could ignore all of them in one spin of the dial. :)

How many people travel often between Albany and Wichita and spend
enough time there to know the playlists are similar? Are you
proposing that if Wichita plays a song, Albany can't? Who will keep
the database of permitted songs in specific markets?

>The reason for this is well known, the radio stations are essentially bought
>and paid for by the record companies through what is known as Payola. So,
>they aren't in the business of helping you and I enjoy music, they are in
>the business of making money...

So, record companies should produce songs for individual communities
and forego mass markets? I've programmed music stations in Boston, San
Diego and New York, as well as hundreds via syndication over the
years. Not once has any record company ever offered me anything that
could be considered Payola. Where did I go wrong? All I got was a
stinking phony bubble gum machine. In New York, my station was a Radio
& Records reporting station. That should have been worth something -
maybe at least a political-type junket to a warm, hooker-filled
resort.

>Today, I have several options for hooking up an MP3 player to my car; from
>cassette adapters to units that allow me to integrate my iPod into the car -
>the iPod becomes my personal library of music that I have an interest in.

That's really the issue, not "cookie-cutter" formats. You want what
you want when you want it. You're still a profit center for the record
companies because I'm sure you're not illegally downloading or ripping
CDs you haven't purchased. I'm sure you've paid for every cut that
resides in the iPod (ripping other people's CDs isn't kosher, either).
Remember, we're assuming you're honest.

With the legal and honesty issues out of the way we need to deal with
all those people who still can't figure out how to get rid of the
flashing 12:00 on their VCRs.

My car and home are wired and wireless. Like you, I'm what used to be
called a Geek (now Techie). I can plug anything into anything. Even my
Tivo updates itself wirelessly.

>Can radio overcome this uncertain future? Can they build audience loyalty?
>In short, NO. I think they have something major working against them: You
>can't be all things to all people, which is what they are relying on with a
>push model.

The "push" model is essentially the same as the mass marketing model. If every person demands a different music mix (with legally purchased music, of course) radio will go away, as will MTV and other sampling sources that now let you hear what music you want to legally purchase to fill your iPod. You are buying the music you're recording? Remember, I'm assuming you're honest. No swapping; by the letter of the law that says you can make an archival copy for your own use.

Let's go back to the labor-intensive nature of your model. I assume you have many small electronic devices. Each one has 97 more functions than you'll ever use. Do you remember all of them without going to the manual? My VCR requires 23 button pushes to set the clock. Some require two hands. Since I only use that sequence once or twice a year I haven't committed it to memory.

My car's battery went dead not long ago. I had to reset 2 clocks, a terrestrial radio's 18 per band station presets, 18 XM presets and 20 SIRIUS presets. I was living in New York during the last power failure. 29 hours without power. Everything had to be reset. I won't even attempt to calculate the number of button pushes needed.

How many people do you know who make regular computer backups? I have a 30gb MP3 player. The general rule in computing is not IF your hard drive will die, it's when. You are making backups of all that legally purchased music and are prepared to reload everything?

So, the mass market is gone. Not much new music is being produced except by those willing to let you legally purchase and download the few songs they cut in their garage (without egg cartons on the wall). Now we're reduced to recording ourselves in the shower. When I sing in the shower the tiles shatter, so that's not an option.

I know many, many people with gadgets. After a while they get tired of the work they require and either listen to terrestrial radio or silence punctuated by some obscenity hurled from the car in the next lane.

Too much work for all but the Geekiest among us.

Rich

I can see LEO satellites as a possible eventual replacement for shortwave.

But it's going to be pretty tough to get the costs low enough (both on
the transmitting side and the receiving side) to make it fly in poorer
countries. (I'm not familiar with WorldSpace's pricing) I've my doubts
that any scheme that involves monthly subscription charges will work.

I can see RFID tagging and water-meter transponders operating on SW
frequencies. Maybe with a modest spread-spectrum (over a few hundred
KHz) scheme.

I don't see portable messaging schemes working on SW. The problem is
noise from digital equipment. (computers, mostly) I think you're going
to have a hard time pushing enough RF through modern metal-framed
buildings to overcome computer hash.

The telcos were pricing it higher than many leased line facilities. Hell,
you could get Switched-56 for less than ISDN in Richmond, VA. (Sadly here
in GTE-land we couldn't get either).

I could get a 16KC 2-wire crosstown for less than a quarter what a single
remote ISDN circuit cost. And I could get the 16KC loop installed with a
week's notice, instead of a year.

I dunno, but I'd sure like to be able to order 48F burglar alarm circuits
from the telco again. Now THAT was a cheap way of doing remote work. And
sometimes it even sounded good.

No, not at all. Payola is long gone. Back when there was payola, PDs
were happy to play new music, because the record companies paid them to
play new music. Now everybody is terrified of playing new music, so they
all have become followers. Payola is what kept radio fresh and interesting
for years, and what you're seeing with the current homogenization of commercial
radio is what has happened as a result of it being eliminated.

...which has been effectively dead for most of the past decade if not longer, according to what I see in the business (not radio trade) press. For that matter, "mass marketing" radio went the way of the dodo at least as long ago. Have you ever heard a commercial station with both Tim McGraw and Eminem in its playlist? Yet I remember, as recently as the early 1980s, hearing Kenny Rogers and The Clash on the same station. Even "We Play Everything" WRZA has settled down into its "males 25-54" niche; I venture to say (based on my admittedly limited listening experience) that their "everything" does not include either Celine Dion or Buddy Guy.

Talk to some of your advertising clients.... Even what were once considered to be the ultimate in mass-merchandised products (soap, hamburgers, Coke, tires) are now marketed just as narrowly as radio formats. (This should come as no surprise to anyone, as the narrowing of radio formats was driven by the economics of advertising.) Of course, narrower radio formats don't help advertisers who are seeking an audience that doesn't use commercial radio at all (e.g., educated adults 18-30, like most of my co-workers).

Given the rate of cultural fragmentation currently observed in this country, the days of any sort of sustained mass audiences are long over and unlikely ever to return.

I'd much rather see the majors continue to mass-produce, and the local radio stations offer a little better focus on local indie artists from time to time. Nine Inch Nails, formed by Trent Reznor, sounds incredible, but Reznor moved to my hometown from Mercer, PA to try to break into the business, and was spectacularly unsuccessful. I understand he hates Cleveland as a result, and given the abject lack of ANY kind of airplay he got from ANY of the commercial stations in town, I can't blame him for being angry.

I'm not saying indie rock is all the big stations should play, but it would be nice if more of them made an effort to help break new talent from time to time. Reznor had a sound that probably would have worked on WMMS (the local album-rock station back then), but did he get into the rotation there, ever? Ha. I never heard him on 'MMS. Not once. I heard more buzz from people I talked to working near a local college campus than I heard anywhere else, even a couple years later when the local Top-40 station flipped to "modern rock". (A few years later, however, the modern rock's station airplay of "Ballad of Peter Pumpkinhead" by XTC prompted WMMS to play the song too, which was rather amusing because I never figured I'd hear XTC on the radio at all.)

Only problem with your scheme and frequency choice is that even very low power signals can propagate at odd times. There are lots of hams running 1 or 2 milliwatts and getting contacts on HF frequencies, and signals from miles away would be just as receivable as those close by. Instant interference. One of the reasons that VHF and up are so desired for data is that they propagate less than HF and below.

# 3021. Germany looking to replace DAB with superior technology

Newsgroup: rec.radio.broadcasting
Date: 2004-11-26 22:56:52 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <co8cbk$p0h$1@xuxa.iecc.com>
Source record: 3359
Cross-posted to: alt.radio.digital,rec.radio.broadcasting

In Germany, the Media Council for Berlin and Brandenburg (MABB) has stopped issuing licences for Digital Audio Broadcasting (DAB). In that part of Germany, DAB has not proved popular with the public. Sales of DAB receivers have been below expectations, and consumer satisfaction with reception quality has been low. Especially troublesome is the poor reception of DAB inside buildings, whereas FM signals can still be received. A number of Berlin radio stations have already stopped relaying their FM services on DAB. They have been replaced by other services such as Roadradio (a motoring station), YOYO (a children's station) and the BBC.

The MABB says the technical quality of DAB, which dates from the 1980's and is still based on MPEG 2, has been superceded by superior technology. This view is not shared all across Germany. For instance, in Bavaria and Baden-W�rttemberg DAB is still being heavily promoted. But the MABB is already looking at the next generation of broadcasting technology such as DVB-H and DMB (Digital Multimedia Broadcasting). This is expected to be demonstrated on a large scale at the Internationale Funkaustellung 2005 in Berlin.

> either Celine Dion or Buddy Guy.

Yeah, isn't that a shame? No, really! (I had to confirm that I wasn't being sarcastic, since a comment like that referring to Dion could be considered snarky). That's exactly what I miss in radio today....way too predictable, no coliones to just play something that's good, regardless of its genre. Gone are the days when you could have a crossover pop hit, as in the days when Country was so big it crossed-over to pop, or (from the sublime to the ridiculous) when the Bee Gees went disco, thus infiltrating AOR stations with the first beachhead for that abomination. This effect appears also on satellite radio, where the music channels are so researched and segregated that it's YOU, the listener, who has to go search out diversity, because you're not going to find anything outside of the channel's target.

> Given the rate of cultural fragmentation currently observed in this
> country, the days of any sort of sustained mass audiences are long
> over and unlikely ever to return.

Which only goes to show that we, the American public, have lost our edge. If we can't embrace the slightlest little thing like music as a chance to see a little bit more of the world, then how in the world can you expect that we'll even listen to something as important as where our country is going?

Ray Charles was, by most estimations, a great artist. In my opinion, the reason why he is considered so is because, as he said himself, the only thing he required of his music was that it was "good music." His search for "good music" changed our culture, adding jazz, blues, country, rockabilly, rock and so much more, making us the richer for it, and in large measure, even, makiing it possible for acts like the Beatles and other milestone rock acts to effect their own changes.

So here we are....stuck at a wall we will not climb.

I think I'm going to go out back and slash my wrists.

I don't believe you can "see" the Worldspace satellites from North
America, and even if you could, it's probably impossible to get one
activated unless you have a european address.

I realize the reception quality on satellite radio is much better than
that on shortwave, but is replacing a free service with a subscription
service really a sensible way to go (unless you own stock in the
satellite company!)?

Untrue. A PD was fired in Rochester for accepting the latest record company scam, giving gift cards 2to give to listeners" which the PD kept... that was last week. There were a half-dozen indictments about 5 years ago in CA, resulting in two convictions.

> Back when there was payola, PDs
> were happy to play new music, because the record companies paid them to
> play new music.

The practice was never prevalent, and most PDs knew it was illegal and a firing offense, too. Few station staffers ever took payola. And even when givin, it affected only the biggest stations in the biggest markets.

> Now everybody is terrified of playing new music, so they
> all have become followers.

Everyone realizes the average listener only wants to hear a small bit of new music.

> Payola is what kept radio fresh and interesting

Hi,

I noticed another FS posting in rec.radio.broadcasting and since it IS radio equipment for sale, I believe this is allowed. If not, please let me know and I will not post another article with this equipment.

I have seen these receivers for sale on a used radio equipment website (Bay Country) for $899 used.

http://www.baycountry.com/used_equipment.html

I will sell the one I have for $595 and shipping. It works great, and looks great. Very gently used. Use Paypal and you can use Paypal Buyer Credit to pay off over several months if approved. I also would accept checks/money orders.

Contact me if you have any questions, and thanks. I only have one so first come, first served.

> your rcist little agenda, does it?

Nonsense. There is Spanish language all over the station. It's aimed
at Spanish speaking people who might just happen to know English out
of begrudging necessity. Speaking of a racist agenda, somebody please
tell me with a straight face that a station with a slogan "European
and Proud" would get a pass? I don't even think "Black and Proud"
would get a pass. I've said it before, and I'll say it again, people
sure have no qualms about flocking to this nation filled with
opportunity that white Europeans happened to build. It's fashionable
to hate Whitey and quash his culture after you greedily take what
he's built and complain on top of it. Sure, some groups were
exploited as this nation was being constructed, which was wrong and
unfortunate. However, they were no more exploited than they would
have been in their home countries, as evidenced by dominant African
tribes selling people from conquered tribes to Dutch/Arab traders.
Here's another one for you - black people were enslaved by other free
black people in Louisiana and elsewhere.

# 3030. KAGV from Alaska testing on 1110 kHz mediumwave

Consumer impedance is HI Z (10-20K) not 8 ohms...
Only SPKR out is 8 ohms......two caps in series will not match low to medium Z....only a xfmr will do that....

For consumer line to PRO connection, you can do this:
tie consumer ground to Pro shield.....
tie consumer high to either PRO + or - input...
leave remaining input floating....do NOT ground or tie to other input (this will be close and give you a good enough range to work with)..

Wednesday, 24 November 2004

On Friday (19/11), the UK based Christian Broadcasting Council, held its Annual Media Awards for 2004 at the Holiday Inn in Stoke-on-Trent.

The awards covered the whole range of television and radio in the UK and our awards went to a variety of organisations covering both mainstream broadcasters and some satellite channels.

The Association of Christian Writers helped CBC in the judging of the section of the awards for Christian writers named Fred Grossmith Awards, in honour of the writer and past Vice President of CBC the Rev Frederick T Grossmith who went to be with the Lord in 2002. Fred was always keen to encourage Christian writers and scriptwriters.

All CBC awards are judged on their excellence of production and on their Christian content.
In addition an award was made this year of the J Q Davies Award, named after the founder of CBC. The award is periodically given for innovation and achievement in the area of Christian media.

Ram Gidoomal CBE of South Asian Concern presented the awards. The winners in the radio categories are as follows:

Best Christian Radio Ministry Programme:

Gold Award
'Sunday Worship' - The gospel in the market place.
BBC Radio Religion & Ethics
Produced by Philip Billson
For BBC Radio 4

Silver Award
'Peter's Story'
GRF Christian Radio
Produced by Brian Muir
For various stations throughout Easter 2004

Bronze Award
'Celebration'
BBC Wales - Religion
Produced by Karen Walker
For BBC Radio Wales

Best Christian Radio Speech Programme:

Gold Award
'A Borstal Good Friday'
HCJB-UK
Presented & produced by Colin Lowther of HCJB-UK
For Pulse Classic Gold

Joint Silver Awards
'About a Cross' - narrated and performed by Rob Lacey
Produced by Karen Walker and Sian Baker
For BBC Wales
'The Passion of the Christ' - The Discussion
Presented by Mike Shaft & produced by Ali Hutchison
For BBC GMR

Joint Bronze Awards
Bronze Award
'After Life'
Produced by Celia Kellett
For BBC Radio Nottingham

Bronze Award
'Golgotha Live'
Produced by Justin Brierley
For Premier Radio

CBC was founded in 1983 to sponsor and support Christian broadcasting in UK and its membership includes both UK independent Christian broadcasters and individuals who support the need for strong independent Christian companies in both the broadcasting and production sector of the radio and TV industries.

Text of report in English by Romanian news agency Rompres

Bucharest, 26 November: November seems to be a popular month for launching new radio stations as Radio 3 net has already had its official opening and Radio Info Pro and Guerrilla Radio are in the pipeline.

Radio 3 Net is a new brand from the Romanian Broadcast Society and can be accessed on the internet at www.radio3net.ro.

"The project of re-engineering the entire station is complex and we have allotted 6.5m euros for this. An additional 2.5m euros are coming and will also include Radio 3 Net," said Dragos Seuleanu, president of the Romanian Broadcast Society.

The team of the new station is managed by Florian Pittis and includes Jerry Schwartz, Sorin Chifiriuc, Lenti Chiriac, Marcel Platon and Florin Zegrea. The station airs quality music, cultural news, sports, financial and legislative information as well as entertainment, information about administration, jobs, IT and media.

Academia Catavencu group is to launch a new radio station managed by Razvan Exarhu, following an investment of about 500,000 euros in the first year. The station, whose most publicized potential names are Crazy FM and Guerrilla, replaces Radio Fun on the 94.8 MHz FM frequency. The station targets people between 20 and 45 years old and its format includes 70 per cent entertainment and 30 per cent editorial.

The operator of the broadcast licence is Fun Radio SRL, whose ownership includes Academia Catavencu SA with 50 per cent of the shares and the editorial control, Regent House, part of Regent House Properties Limited owned by Nicolae Ratiu and Calin Husar, who is involved in B-24-FUN guide along with Academia Catavencu. The audience objectives include ranking in the top five by 15 March 2005 and in the top four by 15 September next year.

I wouldn't call that payola, though, David. That's just fraud or larceny. But the problem remains that in its executed form (where said gift cards actually go to said listeners), it's still a corruption of the way things should be. The gift cards would have augmented the station's promotion budget, thus enabling the station to, perhaps, capitalise on the opportunity to greater financial rewards...and all the PD had to do was "give a moment of consideration" to the list of otherwise unremarkable recordings.

Payola or not, anyone having an interest in the music business should be barred from offering any rewards to the outlets or their representatives who make decisions on whether or not that outlet should be playing the output from the music business.

Like that's going to happen anytime soon.

About the only thing that Gore managed to actually do in Tennessee was get Residential ISDN handled the same as a standard analog circuit.. The equipment was pricey, but other than that, it was the same price as any other residential loop. In Florida? Priced -above- the roof. Way over it. When I asked for ISDN, I got told the circuit would be something like $118 a month, plus $.10 per minute while it was "off the hook".. plus so many cents per operation on the control circuit. (Pick up and dial, another $.10..that sort of thing.) - If you used both channels, double the per minute rate. In short, a huge ripoff.. (And they also jacked up the long distance rates through the roof as well.)

>I dunno, but I'd sure like to be able to order 48F burglar alarm circuits
>from the telco again. Now THAT was a cheap way of doing remote work. And
>sometimes it even sounded good.
>--scott

Same - given a bit of inspiration, a friend down there ended up have a monitoring circuit from his house to his ISP. Instant T1...

Only if you accept the thesis that "the average listener" is a
drooling idiot.

Of course, since two decades of radio programming directed towards
morons has driven many non-morons away from radio entirely (at least
as a source on musical entertainment), this could now reasonably be
stipulated as the audience living up (or rather, down) to programmers'
expectations.

Hello - I wanted to send you some info I think the About.com users would find usefull. It's a new website aimed at smaller radio stations who need voice-over work for commercials, liners, etc.

Free Voice Over Exchange Service
Have you ever wished that you had more variety when it comes to voices on your radio station? Most LPFM and small NCE stations don't have the budget to keep a full staff of people. So it usually comes down to one or two people doing all the spots, liners and bumpers. Well - no more! With our new service and your assistance, we can all come together through this new free service and share our voices! The concept is simple - you need a spot or liner read? Just log into the website, upload the copy and one of our other members will read the copy and upload the spot back to the site for you to download! Walla - a new voice for your station. We only ask that you offer the same in return to our members. Check it out at http://www.RadioDaddy.com

Chris: << Consumer impedance is HI Z (10-20K) not 8 ohms... >>

Ah so... I misunderstood that part. Further:

I was wondering about that series cap thing myself. I've been retired for a dozen years but it didn't look right. I expected a network with different values at each port. But I recalled it being a suggestion from Hamilton, the maker of the Rangemaster AM1000, a Part 15 AM transmitter.

The Radio Shack transformer was my own suggestion (now moot) to the fellow, whom I recall asking about matching a CD player to a line input.

Even in my old age, I need to resume checking other people's suggestions myself before recommending them to anyone else. (Sigh...)

# 3045. Radio Revolution, the DRM way

Newsgroup: rec.radio.broadcasting
Date: 2004-11-28 18:18:09 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cod4p1$hp2$1@xuxa.iecc.com>
Source record: 3385
Cross-posted to: alt.radio.digital,rec.radio.broadcasting,rec.radio.shortwave,uk.radio

With clear, near-FM quality sound, excellent reception and dramatic improvement over analogue, Digital Radio Mondiale (DRM) will revitalize radio in markets worldwide.

Traditional AM can travel great lengths along the curvature of the earth, but it is notoriously prone to disturbances. The same holds true for short wave, which can reach the other side of the planet by bouncing a signal off the ionosphere. But its reception is prone interference from solar conditions, the time of day and year as well as the distance between the transmitter and the target receiver.

There is a global trend towards the adoption of digital technology in radio and communications, especially for distribution and transmission. Digitalization offers many substantial advantages to national/international broadcasters and info casters. We are seeing the introduction of high quality delivery systems in homes. FM sound broadcasting is gradually moving to a DAB standard. But coverage on FM 88-108 MHz (VHF) is limited. For many national and international broadcasters, the advantage of a complementary digital broadcast system below 30 MHz is gradually emerging. However, the limited fidelity of existing AM services is causing listeners to search for other alternatives.

Implementation of digital radio in today's AM bands (i.e. long, medium and short wave) will enable operators to provide services that should be successful with both existing and future high-quality services operating on other parts of the dial. Digital broadcasting on short wave, medium wave, or long wave (AM) is highly advantageous when compared to the conventional analogue system that is now in use.

Digital Radio Mondiale (DRM) is a fast emerging domain that combines the benefits of FM and AM. This has FM like sound quality with lesser multi-path interference and the reach of AM. Some DRM receivers and equipment are already available to broadcasters and consumers, with more expected throughout 2004. Besides providing

near - FM quality audio, the DRM system has the capacity to integrate data and text. This additional content can be displayed on DRM receiver to enhance the listening experience.

Unlike digital systems that require a new frequency allocation, DRM uses existing AM broadcast frequency bands. The DRM signal is designed to fit in with the existing AM broadcasting AM broadcast band plan, based on signals of 9 kHz or 10 kHz bandwidth. It has modes requiring as little as 4.5 kHz or 5 kHz bandwidth, plus modes that can take advantage of wider bandwidth, such as 18 or 20 kHz. Simulcast testing is underway. Many existing AM transmitters can be easily modified to carry DRM signals.

The DRM technology works by encoding the signal using MPEG 4 compression to make it fit the existing AM bandwidth. While minimizing interface, the digital technology has only two modes: reception and no reception. Hardcore short wave fans who appreciate the challenge of deciphering short wave broadcasts unperturbed by the notorious fading may lament this. But near FM digital quality makes short wave interesting for an audience that has never touched a world band receiver before. Another advantage is that DRM requires only 10% of the power needed for traditional short wave transmission and therefore, for broadcasters, new transmission equipment pays for itself. Furthermore, DRM allows for dual transmission mode, broadcasting analogue as well as digital.

DRM applications include fixed and portable radios, car receivers, software receivers and PDAs. Depending on broadcasters preferences, the DRM system can use three types of audio coding. MPEG4 AAC audio coding augmented by SBR bandwidth extension is used as a general-purpose audio coder and provides the highest quality. MPEG4 CELP speech coding is used for high quality speech coding where there is no musical content. HVXC speech coding can be used to provide a very low bit-rate speech coder.

Today, DRM is the world's only non-proprietary, digital system for short, medium and long wave with the ability to use existing frequencies and bandwidth across the globe. It is the only digital radio system recommended by the international telecommunication union (ITU) for all the three radio bands below 30MHz short wave, medium wave, and long wave. In January 2003 the DRM consortium took the first hurdle in

standardizing audio broadcasts on the AM bands when the International Electro-technical Committee (IEC) granted the DRM transmission technology an international standard.

Since DRM's inaugural broadcast on June 16, 2003, more than 60 broadcasters have started transmitting their daily, weekly or periodic DRM programs. Thereafter, an increasing number of broadcasters started their DRM transmissions. In August 2003, DRM and the World DAB Forum announced their cooperation, paving the way for DRM and DAB capable receivers. Sony has committed to help expand the markets for digital radio in Europe, pledging its active support in the commercial sectors of both DRM and World DAB Forum.

India remains oblivious to the benefits of such a platform; leave aside launching this technology. While speaking to India's only radio network in this context, few were even aware that radio was on the threshold of going digital!

> I wouldn't call that payola, though, David. That's just fraud or larceny.

It's clear payola. every communications attorney in the US sent a note to
clients saying about the same thing, too.

The record company said, "Hey, Mr. PD, here are a few thousand dollars in
gift cards for on air promotion. (wink, wink). why don't you give them away
on the air... if you want."

the idea was that if they did nto get given away, the record duck was not
going tocompalin, and the PD could go on a shopping spree. Clear and present
payola.

> But the
> problem remains that in its executed form (where said gift cards actually
> go to said

Artist based promotions have been a legal and legitimate synergistic
promotion with radio for many, many decades. As long as there is disclosure,
it is legit. The minute management approves, there is no payola possible.

Hmm. I've signed several employment agreements as well as employee
manuals that require me either to not accept anything above a certain
value (lunch not included) or return the gift to the sender.

Boston Gas sent a toy locomotive to me at Christmas one year. I was
working for GE's WJIB(FM). Their campaign was called the "Montreal
Express," named for the cold winds from the North. I had to return it.

Posting for sale in a discussion newsgroup is generally not allowed. If the word marketing isn't part of the newsgroup name, ads are not supposed to be posted. Since you're posting from a Level3.com IP, their acceptable use policy on this is clear: http://www.level3.com/764.html
"Continued posting of off-topic messages, including commercial messages (unless specifically invited by charter), is prohibited."
I doubt you can find a charter for alt.radio.broadcasting that says commercial or for sale messages are invited. Absent such a charter, your ISP's rules would prohibit them.

This is true of most human beings, radio listeners or not. The unfamiliar is
harder to assimilate than the familiar. Go to a club sometime and see which
songs the folks dance to... is it the unfamiliar or the known? Go to an
artist concert... when do the folks applaud? I'll bet it is when the artist
sings the big hits, not when they sing the unfamiliar new stuff they want to
hype from the new album.

95% of Americas listen to radio. Either you are wrong, or there are not many
bright people in America any more.

A step-up transformer IS one way of approaching the problem. It gets you
voltage gain at the expense of current loss, and if you are going into
a modern high-Z balanced input so you don't need to drive a 600 ohm load,
it's a good way to go. BUT, good transformers are expensive and cost a
good bit more than the electronic bump boxes.

Note that most MW stations operating on clear channels in Alaska are Class A stations.

This new station is a Class B station, even though it operates at 10 kW ND-U.

# 3058. A. W. Dharmapala of Radio Ceylon

Newsgroup: rec.radio.broadcasting
Date: 2004-11-28 18:18:23 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cod4pf$hso$1@xuxa.iecc.com>
Source record: 3389

by Ananda W. P. Guruge

This article is published to commemorate the birth centenary of veteran broadcaster A. W. Dharmapala which fell on November 24.

While radio broadcasting was still in its earliest stages in Sri Lanka, Radio Ceylon evoked wonder and curiosity. Not only the presenters of programmes but also technical personnel who brought the magic of music and voice to a little box on the mantle received special attention. A name mentioned in connection with the first Sinhala broadcast was that of A. W. Dharmapala, the young and enterprising engineer. It was his voice that the people of Sri Lanka heard in Sinhala over seventy years ago.

My close and memorable association with Dharmapala goes way back to 1951 when as a graduate student I had the privilege of being a regular broadcaster in Dr. Ediriweera Sarathchandra's "Shastriya Sangraha". Those were days when Radio Ceylon (as the Sri Lanka Broadcasting Corporation was then known) had not yet come of age and the production of a programme needed constant technical support. Breakdowns were frequent as microphones went out of order or recording machines refused to work as needed.

Technical aspects
All broadcasters, especially those of us who delivered our programmes live late in the evening, were relieved to find Dharmapala, the Outdoor Broadcasting Engineer, ready at hand with his wide repertoire of technical skills, ever smiling and always cooperative. No task was too small for him. His single-minded dedication to improving the technical aspects of broadcasting ultimately resulted in a fault-free technical infrastructure, which is undoubtedly to his lasting credit. It was thus we became friends and our friendship lasted many decades.

I came much closer to him both physically and in work in 1954 when I was entrusted with the organization of the national celebration of Buddha Jayanti to mark the dual occasion of the 2500th anniversary of the Buddha's death and the founding of the Sinhala kingdom in Sri Lanka. My office was in the Home Ministry located in Torrington Square and from my office to Radio Ceylon was a brief walk of two minutes by backdoors of both buildings. The point of entry to Radio Ceylon for me was past Dharmapala's office.

As the Buddha Jayanti Programme depended heavily on the radio, I was at Radio Ceylon practically every day and some days several times. Often I needed to have Dharmapala's advice and direct involvement, especially as the entire Outside Broadcasting Operation was under his control. Buddha Jayanti activities were broadcast from all over.

Complicated operation
A very complicated operation was when the switching on of the lights on the path to Sri Pada was an occasion when Justin Kotelawala (representing the Prime Minister, Sir John Kotelawala) and I were to speak from the Uda Maluwa. Kotelawala was very diffident whether we had the capacity to do so and I assured him that Dharmapala was there to ensure that all that was technically feasible would be perfect.

It was really so and the ceremony was heard clearly without a hitch all over the island. An eager listener in Colombo was the Prime Minister himself who had a personal interest in the supply of electricity from Lakshapana to Sri Pada as the fulfillment of a vow. I told him of the most efficient and helpful Engineer of Radio Ceylon and his staff who made this broadcast possible.

An immediate result of Dharmapala readiness to cooperate fully in the Buddha Jayanti activities was that he was entrusted with equipping a mobile public address and outdoor broadcasting unit for the Lanka Buddha Mandalaya. Walkers Limited was supplying the van but it was the Prime Minister's own decision that the technical aspects of the project was to be entrusted to Dharmapala. It was no easy task because he did it entirely as a voluntary activity outside his normal office hours. I have often been to the workshop after office to find that Dharmapala was not only doing all the technical designing but also taking upon himself the detailed tasks of wiring and fitting sophisticated equipment.

For 1955, we had the most up to date broadcasting unit performing a wide variety of activities. The unit was used to send monks all over the island to preach in villages which had no monks. It handled all outdoor broadcasting activities from every nook and corner of the country. So conscientious and attached Dharmapala was to his project that he personally serviced the equipment periodically and looked after its frequent upgrading.

Sunday, November 28, 2004

The current owner of the radio ship MV Communicator, Dave Miller, is advertising the ship for sale.

An advertisement on his Web site invites offers over £25k, but says that no radio equipment is included in the sale.

(More at http://medianetwork.blogspot.com/ )

(Thanks to David Leadbeater).

This from http://www.thesuperstation.co.uk/sale.htm (superb photos there as well).

"This is the former home of Laser 558. The MV Communictor is currently situated in St Margarets Hope in the Orkney Islands.

The ship has a 200 ft radio transmission mast along with 4 generators and engines needing attention.

The MV Communicator was vandalised during her time in Holland and requires some TLC.

Steeped in history there are only 2 working radio ships left in the World.

Recently used as The Superstation this piece of broadcasting history is a fantastic marketing tool for any radio station.

Built in 1954 by Abeking & Rasmussen in Lemwerder/Bremen (West Germany) for Det Stavangerske Dampskipsselskap (DSD) in Stavanger (Norway) as a cargo vessel. The tonnage of the vessel was 477 GRT, 190 NRT and 575 TDW and the vessel measured 186,8 / 29,3 / 8,7. The ship was one of six similar ships owned and operated by the company to carry cargo between Bergen, Stavanger and Oslo. Before renamed MV Communicator the ship was called Tananger, Charterer and Gardline Seeker.

NO Radio equpiment is included in the sale.

Offers over £25k."

(Thanks to Steve Martin for telling us about this).

In article <cod4pd$hrf$1@xuxa.iecc.com>,
David Eduardo <amdavid@pacbell.com> wrote:

>95% of Americas listen to radio.

I don't believe that number for a moment (even stipulating the typo). If you had said "are exposed to radio every week", I might be willing to go along. But exposure and the sort of attention that is implied by "listen" are very different things -- something advertisers are beginning to understand. (That's also one of the flaws in Arbitron's "portable people meter" methodology: it's as good a measure as the sample size allows for *exposure*, but can't measure *listening*.) As an advertiser, a potential customer who is merely exposed to my message is not worth nearly as much as a potential customer who is actually paying attention.[1]

Although the current talk about shorter stop sets is evidence that both broadcasters and advertisers are getting this message, it's not clear that they will really benefit, now that they have trained the audience to tune out (either mentally or physically) as soon as the first spot begins. (How do you promote shorter stop sets? "Only five commercials up next before another long music set on Q-92?")

Meanwhile, we have a whole generation growing up in today's toxic media environment who neither look to radio for entertainment nor are particularly influenced by current modes of advertising. (Brings a new meaning to "you're soaking in it!") Compare the size of a suburban teenager's music collection to the playlist of one of your radio stations; I'll bet you nine times out of ten, your hypothetical teenager enjoys a greater variety of music than you play.

For most of the past forty years, music radio has been the leader in introducing people to new music, which they could then go out and buy. (That's why over-the-air radio only has to pay license fees to the songwriters and composers, and not to the performers or record labels: it's considered a promotional expense to sell more recordings and concert tickets.) Today, with a few bright exceptions, radio has made itself largely irrelevant to this marketplace. Is it any wonder that audiences no longer expect radio to provide new music?

>Either you are wrong, or there are not many bright people in America
>any more.

There never were, by definition. Garrison Keillor to the contrary, there is no place were "all the children are above average".

-GAWollman

[1] A good example: I was at my dentist's office last week. As an observant person and radio junkie, I noticed that she had WCRB on, rather than her usual WROR-FM. If I had been wearing a PPM, it would have credited WCRB with 45 minutes of my time -- even though I paid no attention to it (or to the advertising messages) after recognizing the source. I know from talking to my dentist that she puts the radio on to provide soothing background noise; only a patient who has arrived early for an appointment has enough attentional resources to notice the actual content of the programming. I regularly freak out Jennifer, the dental assistant, when I make an off-hand comment about something that just came out of the radio, and she had so completely tuned it out as background noise that she has absolutely no idea what I'm talking about.

Wow! Thanks for the information Mike! This makes purchasing a more difficult choice. I know that XM carries MLB (Major League Baseball), so if you like baseball and soccer, you may need two services! Now if you like NFL (National Football League) games, you are in luck, I believe they are on Sirius.

I love to watch Premiere League on Fox Sports World.

Later!

I.

I don't see AM/FM radio having a future.Other than news,what reason is there,to listen to AM/FM radio anymore? And how many news stations can you really have in an area? Annoying dj's,cheesy contests,etc..not for me! And AM/FM stations have an average of what,15-16 minutes of commercials per hour?

As far as music,I've gone to satellite radio.

Why don't you supply us with some input to the poor individual's question instead of this smart ass type of response. Az answered very thoughtfully.

To Walt:
As Az pointed out, visit the XM and Sirius web sites. Look at their program guides. You will find that one service will provide programming you cannot get on the other, e.g. NFL football v. Major League Baseball. Also note which "talent" is airing on each service, e.g. Howard Stern will be on Sirius in a couple of years (a major turn off to me). These two will fight long and hard for their services, so you probably can't lose with either one at this time.

As for installation, a home "boombox" system would be the easiest to install. As I have never dealt with satellite radio personally, I would assume you would have to run an outdoor antenna, but this will not be a big deal. The antenna itself is a small device, no huge multi-element directional as of old. From there you can get car adapter kits and use the same receiver that drops in the boombox.

Good luck and do you homework. Do not let the others discourage you from asking legitemate questions.

Idoru

Lack of _interest_ in financing caused by lack of listeners (i.e., the
service lacks much worth while utility) which has been the case lately with
all but a few of the shortwave broadcasters--it's been shutdown after
shutdown over the past few years.

Fair enough, on all counts. Certainly the issue of intent has a lot to do with it.
I still think that artist-oriented promotions are bad for the business, though, since
it gives the established major labels more of an advantage than the indies.

Advertisers are not making distinctions because what they care about is getting the message across, not who turned the radio on. In any case, many different methodologies, including Arbitron, show that 95% of average Americans... or Canadians... or Mexicans... listen to the radio at least once a week with enough awareness to identify such listening. Such surveys can even be replicated with simple phone samples. It is a fairly uncontested fact in media and ad circles.

> (That's also one of the flaws in Arbitron's
> "portable people meter" methodology: it's as good a measure as the

First, no one cares. Second, the People Meter is not in use yet in the US and it will probably not be until,perhaps, 2007 at the earliest.

> As
> an advertiser, a potential customer who is merely exposed to my

There is no way of telling this with any kind of sample. Advertisers know this, and know that a percentage of messages are not noticed for a variety of reasons. You won't see this discussed in AdAge... just here, where no national advertisers are paying any attention.

Shorter stop sets are intended to improve the effectiveness of messages and to keep listeners longer. Many boroadcasters were not running excessive spot loads anyway... and none were running the loads common in the 50's and 60's.

> concert tickets.)

Wrong. the reason the RIAA never got performance rights such as are common in other developed nations is that they did not get to the table early enough, and now it is too late.

As to being considered promotional expense, that is pure malarky.

> Today, with a few bright exceptions, radio has made
> itself largely irrelevant to this marketplace. Is it any wonder that
> audiences no longer expect radio to provide new music?

They never did, except in small amounts. what has happened is that more now music is being exposed today, as there are more formats available on more stations in every market. A couple of weekly adds a week across 10 formats is a lot of songs; in the 50's and 60's you got 2 to 3 adds on a mass appeal top 40 station, and that was all.
>

No different than a person who puts on a radio and leaves it on during work... may only hear part of the ads. Advertisers know that. Always been that way.

>against them.

Today's teens are not going to magically "grow into" radio listeners
when they hit 21. I work with a lot of twenty-somethings, and when I
ask them about what their radio listening preferences are, the answer
I invariably get (and have gotten for at least the past five years) is
"none". They have no use for it.[1] Not having formed the radio
habit, they are unlikely to suddenly start listenting when they leave
school.

-GAWollman

[1] Just look around at college stations whose affiliated schools do
not have broadcast, communications, or journalism programs. Many of
them have great difficulty getting actual students (whose activity
fees often pay for the station) to take any interest at all in radio
as anything other than "a bigger music collection than I have at
home". All too often, the program schedule is dominated by alumni,
unaffiliated community members, and others from the previous
generation.

Actually, there is a very easy way for an advertiser to tell whether
their message is reaching customers who are paying attention: ask the
customers! I can't think of any major purchase I've made where the
seller did not do so, either at the time of sale/service or during
post-sales followup. I've also been the recipient of a number of
brand-awareness telephone surveys which measure the same thing for
non-durable goods.

> --

Artist promotions are seldom done with unknown artists. Usually, stations limit such activities to tie ins with major artists or newer ones who have a string of recent hits. So, the issue for big vs. small labels is in getting initial airplay or sales or alternative media promotion (like clubs for dance music), since stations will not do a promotion with a "small" artist as a general rule. the idea, of course, is to tie in with the bigness of the artist to enhance the station image.

That only shows a tiny portion oflisteners... those who at that moment have
an interest in the particular product or service. For example, a person who
buys a new car every 4 years only pays attention to car ads when the time
comes to look for a new car. Otherwise, they do not hear the ads at all.

> I can't think of any major purchase I've made where the

That does not measure whether people heard the ad or not. It only measures
the effectiveness of the ad in getting people who are potential consumers to
buy or inquire.

Stations in the 80's introduced new songs into their formats at about the
same rate as in any other decade. In fact, the 80's was the decade when

music research other than tracking sales came into its own, and that caused a reduction, if anything, in new music adds.

No, the average is 3 to 4. But who cares? I don't want to hear new or old music in a format that I do not enjoy. However, the fact that so many different formats are exposing some new songs each week means that there are more opportunities to break a song.

Actually, most do. Once a person has more concerns in life, like a job,
family, and such, they find the time needed to download, burn CDs and such
is much more limited. So radio take a place in thier lives gradually in the
18-24 period.

Actual market measurements done scientifically show that, even in 18-24,
over 90% of people use radio weekly.

Yes, that's OK and true enough on a difficult AM channel. I doubt
anyone listening to a local AM broadcast would be easily convinced
though. To be fair, the article went on to explain the target audience
was the former, rather than the latter.

Cheers,
David.

But what happens when it doesn't take any time to download,
and there's no burning? When your local-wireless (Bluetooth
or whatever) enabled pocket music library device just gets an
automatically downloaded playlist of recent stuff (based on an
automatically learned profile of the types of things you like
and how adventerous you are)? You just pick it up and carry
it with you, and play it wherever you go. Your wireless
mobile network device picks up your news, weather, and traffic,
in the car, office, or home. And there are no commercials in
all this (except maybe the ones you actually ask for).

I think there's just about one more generation left before
that's the way it all works. There will still be a need
for content, but the broadcasting mediums and economics
might be very different from what we've had up to this point.

For sale:

(The "Radio Crazy".....it's baaaaaakkkkk!!!!)

Partial interest in AM and FM radio stations "all over da place". This is a joint venture and there is an element of risk. You could lose all or part of your investment. (Legal disclaimer...this "doomsday" scenario is not very likely to be the case).

Active or inactive investors are welcome with at least $5,000 (Five grand)each. No individual can own over 49 percent. This means me too! All investors would be on the board with full voting rights if desired.

There are also some LPTV CPs in play. Some are going for as little as $5100 !!!

John Peel's widow and children are to finish writing the DJ's life story after he left an uncompleted autobiography when he died.

The late radio legend wrote more than 50,000 words before suffering a heart attack in Peru in October.

His wife Sheila and their four children will add "biographical material and personal reminiscences" to the book, to be published in October 2005.

It would be a "terrible waste" to let his work stay unpublished, Sheila said.

"We thought long and hard about what we should do with John's autobiography," she said.

"This book was very important to him and he was very excited about writing it." He would have wanted his family to complete it, she added.

Larry Finlay, managing director of publisher Transworld, said he was working with the family to "publish the book that I know John himself would have wanted".

The DJ signed a deal worth up to £1.6m for the autobiography with Transworld after a bidding war in April 2003.

Mr Finlay had previously said it was "sad" that unauthorised biographies had been hastily written since John Peel's death. Two have been published in the last week.

The publishers of those books have said they were only doing what countless newspapers, magazines, TV and radio stations and websites had done since his death - paying tribute to a much-loved broadcaster.

BBC Radio 1 has scheduled a night of tribute shows for Peel on 16 December.

DAB Digital Radios make the perfect Christmas gift from under £50.
That's the message coming out of your TV, radio, newspapers and
magazines this Christmas.

On December 1, the DRDB (Digital Radio Development Bureau) launches its final promotional campaign of the year across more than 200 analogue commercial radio stations, including national, local and regional stations.

The 10 second and 20 second spots, which will run for nearly four weeks up to December 24, will also appear on DAB only commercial stations where listeners already converted to the benefits of DAB may be thinking of buying digital radios as Christmas gifts.

Produced by radio specialists, Radioville, for the Digital Radio Development Bureau, the ads focus on the fact that you can now buy a DAB digital radio for "under 50 quid".

The campaign is timed to mirror a multimedia promotion for DAB radio across TV, radio and outdoor sites from the BBC.

Promotions include:

* Classic FM has teamed up with Roberts Radio to give away a special Classic FM branded DAB radio every hour between December 13 and 19.

* Virgin Radio and Digital One are giving away a DAB radio every hour between December 11 and 24.

* Classic Gold is giving away a PURE Digital radio every day from December 1 to 24.

* Capital Gold is also giving away a PURE Digital radio every day from December 1 to 24.

* And DAB Digital Radios feature large in a whole load of BBC competitions across the analogue and digital Networks throughout December.

# 3099. Bob Brown dead

Newsgroup: rec.radio.broadcasting
Date: 2004-12-02 17:57:17 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <conl1t$4hi$1@xuxa.iecc.com>
Source record: 3340

By John Skipper, of The Globe Gazette, Iowa

Mason City - Bob Brown was sure he was the first newsman in the country to announce the death of movie actor James Dean 50 years ago.

Brown, the retired KGLO radio announcer who died Tuesday, loved to tell stories about his career and was telling them as late as Saturday.

George Bauer, former KGLO announcer who now is program director at KUOO Radio in Spirit Lake, interviewed Brown at his home three days before he died.

Bauer is writing a history of KGLO for his master's thesis at South Dakota State University and talked to Brown at his home. He said Brown's voice was weak but his memories were strong, including the story about the actor's death.

Brown told Bauer he was working at a radio station in San Luis Obispo, Calif., a few miles from where Dean wrecked his Porsche. The state trooper who handled the accident stopped at the radio station and gave Brown the information and he put it on the air.

Brown also told Bauer he once met a fellow on a train who turned out to be the "chief cutter" or film editor at Warner Brothers. He arranged for Brown to get a personal tour of the Warner Brothers studios where he saw Shirley Temple and Doris Day, and got to watch Humphrey Bogart filming on the set of "Treasure of the Sierra Madre."

He also watched Howard Hughes fly the famed "Spruce Goose" in California. Brown said he came to Mason City when the entire staff of KTAN Radio in Tucson, Ariz., was fired. Brown said he read about a job at KGLO Radio and Television, made a phone call and took the job over the phone.

"When we left Tucson it was 87 degrees. When we got to Mason City it was below zero. My wife said 'let's turn around and go back,' but we couldn't because I had taken the job," he told Bauer. "I never did get used to the Iowa winters," he said.

He said he also never got used to waking up early in the morning, even though he did it for 30 years.

In addition to being a KGLO announcer, he did commercials on KGLO-TV (now KIMT). He also learned to direct live TV and directed many editions of "Bart's Clubhouse," the afternoon children's show.

Brown told Bauer he was directing "Bart's Clubhouse" when news came in about the Charles City tornado in 1968. He said he instructed Bart Curran, the show's host, to go on the air and tell the kids to "tell your mom and dad to

come to the television, it's important." Then the station broadcast live updates about the storm, rushing film from the scene and putting it on the air before it was even dry. He explained that film was used in those days, not videotape, and needed to be developed in the station's darkroom.

Bauer, who worked at KGLO from 1987 to 1990, said, "I got into radio because of Bob Brown. I remember one day he told a joke on the air and it was the first time I realized, 'Wow. Some guy is doing that for a living.' I grew up listening to Bob for the school menus and his riddle from 'the poet of Rockford' every morning at 10 to 7. I met him when I was in seventh grade and he came to the Osage Junior High School to speak at a career day.

"The first day I sat in the studio across the desk from Bob Brown and Al Heinz, I couldn't believe I was there."

I wonder if this means that they are still continuing with the Orkney licence application but baseing themselves on dry land?

I must say the prospect of buying the ship is very appealing! Although I just can't see where it could be used as a base for a radio station, or what licence it would be worth going for.

Also, given that the ship is fifty years old and has undergone some abuse I would dread to think what the maintenance costs would be.

Looking at the pics on the website, it seems that the studios have been nicely fitted out though.

# 3103. Proposed LF Conference

Newsgroup: rec.radio.broadcasting
Date: 2004-12-02 17:57:32 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <conl2c$4m5$1@xuxa.iecc.com>
Source record: 3339

Carl-Henrik Walde, Secretary of the Swedish National Committee of URSI (Union Radio-Scientifique Internationale), writes: "he venue will be on the west coast of Sweden, from around Thursday June 30 to Saturday July 2, 2005. There is a reason for these dates and the time period should be regarded as fixed, provided we get sufficient interest to launch such a seminar, symposium, or full-fledged conference."

"A few weeks ago, the Nordic Radio Society Foundation (NRS) had its 7th Nordic Shortwave Conference HF04 on the exotic island of F�r� in the Baltic. HF04 comprises VLF issues, albeit the majority is related to HF. 160 participants attended and I devoted my HF04 opening speech to radio station SAQ in Grimeton that had been added, on July 2 this year, to the Unesco World Heritage List:
"That HF04 opening night, I got congratulations for our world heritage success and people said 'now we must go to Grimeton' ...it came to my mind that we ought to organise an international longwave meeting in Varberg so as to combine present ELF, VLF and LF issues with a visit to nearby vintage SAQ. I got immediate support from industry, operators and various agencies. As a matter of fact, I was told that the most recent VLF meeting had been in York, UK, in 1992."

"Varberg is a 'Summer Town' and a perfect venue with all facilities within short walking distance (hotels, youth hostel, campus lecture halls, railway station, Denmark ferry terminal, parking lots, old castle, swimming, caf�s etc etc."

"SAQ was inaugurated on July 2, 1925 by King Gustaf V. The new reception building will be inaugurated on July 2, 2005, celebrating 80 years of SAQ operation. We hope a (member of) royalty will start the alternator to transmit a royal message. This will be the perfect final activity of the '2005 Grimeton longwave meeting'. Thus, the dates are fixed and we have already made a preliminary reservation of hotel rooms. So, please mark the dates in your calender - now."

"We doubt that we can find sponsors to cover an anticipated full conference loss. Do we keep the ambition low (=seminar)? Will we get a lot participants (=conference)? We know that we have to keep the fee reasonably normal and we hope to offer lower rates for university people."

"Therefore, I kindly ask you to tell us if you would be interested in taking part in a '2005 Grimeton longwave meeting.' All answers are without obligations, but we need them in order to help us decide if we should go on and, if so, the ambition. A first invitation and call for papers could be sent out in November, 2004."

All views are welcome. Please submit yours by email to the HF04 administrative secretary, Ms Winnie Svensson at AerotechTelub, e-mail: winnie.svensson@aerotechtelub.se (fax +46 470 42042).

In case anyone is interested the word 'traum' in German equates to the word 'dream' in English.

Hence, the station is Radio Dreamland in English.

For sale:

(The "Radio Crazy" is baaaakkkkk!!!) Hi!

Partial interest in AM/FM station in prospering central Georgia. AM is non-directional 1 KW days, less at night. FM is "full" class "A" 6 KW ERP. Real estate IS INCLUDED!

Active or inactive investors with at least $25,000 each are welcome. No individual can own over 49 percent of the corporation. That applies to me too! All investors would be on the board with full voting rights if desired.

There is an element of risk and you could lose all or part of your investment. This is a JOINT VENTURE, group deal, call it what you will!

For those in the "know" the signal can be heard clearly on car radios in Warner Robins, GA. Home of Robins Air Force base. Warner Robins is possibly one of the fastest growing cities in the nation!!!!! Need I say more.

Text of press release by the Cary, North Carolina-based Christian radio station Trans World Radio on 29 November

Reaffirming a longstanding commitment to proclaim the good news of Jesus Christ throughout South America, international Christian broadcaster Trans World Radio (TWR) on 21 November formally dedicated a new 50,000-watt shortwave transmitter in the southern city of Santa Maria, Brazil. The new broadcasting outlet marks TWR's 14th major international transmitting site, and it fortifies the Mission's nearly 35-year-old evangelical outreach in Brazil.

Broadcast radio DJ James Patterson, who is also licensed amateur M1DST, is attempting to smash the world record for the longest continuous broadcast. His attempt commemorates the 10 years since his friend Dawn Easterling died at the young age of 19. James last smashed the world record with a marathon broadcast of 72 hours in September 2000, raising funds for the Dawn Easterling Appeal by asking listeners to donate money in return for record requests and dedications.

This time, James will be broadcasting a show live on DAB's Swindon FM non-stop for a full 180 hours. That's seven and a half days without any sleep! The show will kick off on Friday 10 December at 6.00am. Medical staff will be on hand in case James suffers from sleep deprivation. James said, "I have done lots of research into staying awake since my last record breaking broadcast, so I know what I am up against! I am really looking forward to breaking the world record, which is currently 120 hours. I will be prepared as much as I can be and have the full support of my family and friends."

# 3112. Germany/UK: WorldDAB responds to German move to scrap DAB

Newsgroup: rec.radio.broadcasting
Date: 2004-12-03 22:35:21 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <coqpn9$jsl$1@xuxa.iecc.com>
Source record: 3350
Cross-posted to: alt.radio.digital,rec.radio.broadcasting,uk.radio

Excerpt from press release on 1 December headlined: "DAB is here to stay! An international response from WorldDAB to the recently published statement by the Berlin and Brandenburg Media Authority (MABB)"

London, 1 December: The Media Authority of Berlin and Brandenburg is becoming more and more isolated from the rest of Europe - and, indeed, the world - in its support for other technologies at the expense of DAB digital radio.

The authority, which regulates media in the region, recently called for DAB Digital Audio Broadcasts to be scrapped in the Lander, saying the technology is "outdated" and a new standard should be adopted for digital radio by 2007.

Elsewhere in Germany, DAB broadcasting enjoys the support of local regulators and broadcasters. In this context, it might have been wiser for MABB to address the real issues with DAB in Germany, which have nothing to do with the technology itself.

The existing strong industry support must be corroborated by the introduction of DAB promotion on the FM network, an increase in transmission power to improve indoor reception and an increase in available spectrum in Band III. These criteria will finally allow DAB to fully succeed in a country that has heavily invested in a technology that is robust, reliable, flexible, established and ridden with opportunities for future developments, such as in the world of multimedia content delivery and telecommunications.

Prof Dr Wolf-Dieter Ring, president of BLM, the authority responsible for commercial broadcasting in Bavaria, explains: "DAB is the ideal system for the digitalization of radio and for the broadcast of data services. The problem does not lie in the DAB standard, but rather in the lack of consumer awareness and of effective marketing. BLM is fully committed to building widespread DAB awareness amongst German consumers."

Along the same lines, Prof Siegle of IMDR, the Digital Radio Marketing Initiative, says: "There is no better system than DAB to take radio digital. The standard was adopted in Germany in 2000, and like all new technologies we need to allow for a certain time-span before a full market is created. DAB plays a crucial part in the world of digital technologies, and the whole industry, in Germany and elsewhere, recognizes that."

Seems like everyone is hitching a ride on the digital radio bandwagon. The latest aboard is good old BT, which today announced its Aviator 10M model. There isn't a huge amount to say about it apart from it tunes into both digital and FM stations, features an alarm and has five (which seems a bit mean) presets.

It does however boast a record feature which will keep up to ten minutes of radio, enabling you to nip out to the office, feed the cat or whatever else you fancy and not miss a second of your favourite show. The BT Aviator 10M also has the ability to play MP3s if they are stored on standard SD and MMC Cards.

Its is on sale now for "reasonably competitive" £129.99

# 3115. Satellite radio on mobile phones

Newsgroup: rec.radio.broadcasting
Date: 2004-12-03 22:35:24 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <coqpnc$jtb$1@xuxa.iecc.com>
Source record: 3254

12 December 2004

Accessing satellite radio on mobile phones would be possible in the next five years. Hugh Panero, chief executive officer, XM Satellite Radio Holdings, has confirmed that his company is exploring the possibility of the merger of the two technologies. Panero says, "Our core base is people who listen to radio at home and in the car and now in the mobile market. I think that as other distribution points present themselves, whether it be cellphones, or other mobile devices, we obviously can have a place in that."

XM Satellite Radio is in discussion with other service providers and hardware manufacturers. "They clearly have a need to efficiently provide content that will help motivate people to buy their hardware and we're a natural place to go as we have become a more important player in content," Panero said. Panero cited greater interest now that XM, the satellite market leader against No. 2 rival Sirius Satellite Radio, draws near three million subscribers.

"When you first start out, you knock on a lot of doors. But when you wind up getting nearly 3 million subscribers... the deal flow moves to you," he said. "We're a natural place that people want to go to explore how we can do things together. Then you get a lot of engineers together and as long as they're all motivated and in the same room, magic can happen. And that's what I think will happen over the next five years," he said.

XM in late October unveiled its wearable Delphi XM MyFi to further differentiate itself from Sirius and to lure users to a medium previously confined to the home and the car. The MyFi costs $350 in addition to XM's $9.99 monthly fee for more than 130 channels of commercial-free programing. It can run for five hours on a rechargeable battery and uses an antenna in its case to draw down the satellite signals.

I think that without DRM, the future of MW in Europe does not look positive
at all.
If only AM would be continued, DX-ing would become gradually easier, as one
by one the AM transmitters would be switched of so that MW in Europe would
become quite empty. But then again, the band was not meant for DX-ers....

Julia Day
Thursday December 2, 2004
The Guardian

It launched the careers of Noel Edmonds, Peter Powell and David Jenson and now, 12 years after disappearing from the airwaves, the legendary Radio Luxembourg, self-proclaimed "station of the stars", is set to be revived.

RTL, a subsidiary of German media group Bertelsmann and Five shareholder that grew out of Radio Luxembourg, is considering resurrecting 'Luxy' by broadcasting it into the UK from overseas on a new radio transmission technique which enables cross-border digital broadcasts.

"We are considering relaunching a UK station from outside of the UK. It could be from Luxembourg, France, Germany, Finland - it depends where we can get a capacity of transmitter sites," said a spokesman.

"Whether it will be the 208 Radio Luxembourg formula, who knows? But it is something we're thinking about."

The digital radio format in operation in the UK relies on a network of local transmitters, but the new Digital Radio Mondiale (DRM) format can transmit long distance and is currently being tested by the BBC and others.

RTL has decided to go ahead with DRM broadcasts in a bid to encourage manufacturers to build DRM radio sets, which it hopes will be in the shops in time for Christmas 2005.

RTL is already broadcasting via DRM from Luxembourg to France and begins broadcasting to Germany next year.

What XM service does the writer subscribe to? The one I pay for has
commercials on all but the music channels. Same with SIRIUS. Does he
pay extra for the 100% commercial free service? How much extra is it?

Rich

## 3125. Euronet Radio introducing regular Shortwave schedule

"Euronet Radio is pleased to announce its forthcoming return to regular broadcasting on shortwave in Europe.

The Euronet Radio group has been experimenting with high-powered shortwave transmissions targeting the British Isles and continental Europe since 2002.

We look forward to delivering a variety of programming via shortwave in 2005.

Keep checking our website for further details regarding the launch of our regular broadcast schedule:

http://www.euronetradio.com

When regular operations commence, our programme content will include items of interest for radio hobbyists, anoraks and radio amateurs, all blended together with the very best music from the 60s, 70s and the 80s.

All Euronet Radio broadcasts are fully authorised and originate from a 100,000 watt transmitter located at Ulbroka in the Republic of Latvia.

For sale:

(The "Radio Crazy" is baaaakkkk!) Hi!

Partial ownership in AM/FM radio station in central Georgia. Heard in Warner Robins, Perry, Hawkinsville, Eastman, Dublin, etc. Warner Robins may well be one of the fastest growing cities in the nation!

This is a joint venture. There is an element of risk and you could lose all or part of your investment.

Active or inactive investors with at least $25,000 each are welcome. No individual can own over 49 percent. This rule applies to me too! All investors would be on the board with full voting rights if desired.

Tower, land and building are included. Total asking price is only $300,000. (An FM was sold in nearby Macon, GA a few years ago for $59 million!)

Only those willing to sign a confidentiality agreement will be told where the stations are.

Tel: (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"
aka Moron Gottesman.

From: wellstd1@gmail.com
Message-ID: <cp24il$237$1@xuxa.iecc.com>
Source record: 3272

What is everyone's thoughts of Sirius's sports and music programming?

I think the music channels are great, there are repeats, but hey, some repeats are good. The sound quality is superb, and I think te DJ's ad a little "zing" to it. My favorite has to be Hits1, but I also enjoy tons more.

I am a football fan, and I like being able to hear both NFL and College games from across the country. I am also looking forward to the NHL and British soccer games. March Madness should also be great!

## 3130. Question on station stream

Newsgroup: rec.radio.broadcasting
Date: 2004-12-06 17:23:34 UTC
From: oblamovossification@yahoo.com
Message-ID: <cp24im$23h$1@xuxa.iecc.com>
Source record: 3271

A station (WPRB) when it signs off for the night, the stream continues to feed static and the mixed music from the stations next to it on the dial.

The delay from the station in real time to the stream is quite long - about ten seconds.

Is this typical? What do you think's going on engineering-wise :)

From: pds83@yahoo.com
Message-ID: <cp24ip$26d$1@xuxa.iecc.com>
Source record: 3276

Can anyone recommend some automation software that will run under Linux? I have been using a windoze based product until now and I am tired of the reliability problems inherent to windoze. It doesn't have to be loaded with features, just the basics. I operate a low power, non-profit, "Part 15" AM station that is on the air 24/7, so cost is an issue as well.

I have Googled this topic a lot, and have only come across a lot of "beta" versions, or sites that say that "they are working on it, and will release a beta soon..."

Any suggestions?

Anyone??

I have Sirius and I think it is great! It is one of the best
purchases I have ever made. The music channels, while not as deep as
XM's play music you are familliar with and don't have to wait a day to
hear a song you like. Sirius, in my opinion, has better talk than XM.
If Sports is your thing then Sirius is the way to go! Sirius has a
24/7 NFL channel, and also plays college football, basketball, NHL,
and British Premier Soccer League games.
I would definately visit both of their websites.

Hey Guys

Just wanted to make you guys aware of www.kwiksounds.com. We offer some great buy out production music on CDs or immediate downloads. The CDs are only $29.97 each, and the complete 14 CD library is $249. The music has been used by Bellsouth, Discovery Channel, The Outdoor Channel, ESPN, and many more. Each disc only has one style music edited in :30, :60, and a long cut in most cases. So check them out! If you order the complete library, you get a bonus CD of all thh music in the "new music" catagory.
We just uploaded some new orchestral music from a group of German writers that are fantastic! Only 5 of 50 cuts have been uploaded and ready for purchase, although the rest will be up shortly. Please come by and check us out.
If you have any constructive suggestions, please sign the guest book and let us know if you are looking for something we don't have so we can try to provide it for you.

Thanks and have a great day!

Danny Jones

# 3137. KBME Houston to Sports on 12/20

Newsgroup: rec.radio.broadcasting
Date: 2004-12-06 17:23:47 UTC
From: Paul Van House <pvanhouse_removeme_@houston.rr.com>
Message-ID: <cp24j3$2be$1@xuxa.iecc.com>
Source record: 3273

CC's KBME (am 790 Houston) says (according to a newspaper article) it will officially kick off its all sport format on 12/20/04. I believe they are using syndicated programming most of the day but have hired Charlie Palillo from soon-to-be-rival KILT-am (all sport for about 10-years) Palillo will host an afternoon/pm-drive talk show. He'll certainly get support from co-owned news/talk KTRH's sports staff. Palillo has been co-hosting KTRH's evening "Sports Beat" program for the past couple of weeks.

So far it would appear the Astros will stay on KTRH since that's what the contract calls for. I would imagine KBME will compete for Rockets and Aeros (minor league hockey) and Texans when those contracts become available.

Meanwhile KILT announced that after a parade of co-hosts, Texans play-by-play announcer Marc Vandermeer will replace Palillo as pm-drive co-host with long-time staffer Rich Lord. Vandermeer had been doing a short call-in show in the mornings on KILT.

Does it have to be Linux? I've seen a "Part 15" station that was completely programmed on an Apple iPod. Of course the owner used a PC to make the MP3s, upload them, and program the iPod, but once that was done the iPod alone ran the station 24/7. To top it off, the iPod and the transmitter were powered by a solar panel and storage batteries! Very clever arrangement.

The only one I can think of that will run on Linux is Scott Systems. They
have a version for Windows XP and Linux. But the cost may be out of the ball
park for your type of station.
Also try http://freshmeat.net/ for other Linux programs.

Man, that's a great question! Maybe it's like timeshare....you only can buy a week
of ownership per year, so that Meyer can sell the station 52 times.

> about ten seconds.

> Is this typical? What do you think's going on engineering-wise :)

Well, the first part is fairly obvious, isn't it? The station is using its off-air monitor to feed the encoder, or the encoder is off-premises, and is taking the feed off the air since that's a no-cost way to get the programming from the studio to the encoder. The second part is that most encoders need some time to encode the audio, plus your player buffers the stream so as to be able to, maybe, fill in a missing packet to reduce dropouts. The delay resides almost entirely within the player because of this need, however.

XM acquired the only radio rights that really mean anything when it got baseball for the next 11 years. Many teams have huge out-of-market followings, and the TV Extra Innings package, while helpful, frustrates fans with its complex blackout restrictions that prevent the airing of all teams' games in most areas. XM will plug that gap with home feeds of every game.

Sirius greatly overpaid for the NFL. Most fans set aside Sunday afternoons for football on TV, not radio, and the Sunday Ticket package provides every game, albeit not on cable yet due to the ill-advised exclusive deal with DirectTV. Hockey (if it ever comes back) and English soccer are niche sports, unlikely to generate significant number of new subscriptions. March Madness is four freakin' weeks and not even every day of those weeks -- Sirius paid big bucks for fewer than 20 days of programming, and when the tournament gets down to the Sweet 16, every game is on national TV anyway, so Sirius will only be providing something unavailable to out-of-market fans (who, along with gamblers, are the target audience) for the first two rounds.

Also, won't XM be able to carry the home feeds of all the schools in the conferences it carries should they get to the tournament, or did its deals with the ACC, Big Ten and Pac Ten only apply to regular season and conference tournament games? XM somehow managed to air the Big Twelve championship football game -- Oklahoma vs. Colorado -- a couple of days ago despite having no deal with the conference or either school, and Sirius has shut XM out of home feeds of USC, UCLA, Michigan and Ohio State, despite XM's having a contract with those schools' conferences, by signing exclusive deals directly with the schools, so who knows what "exclusive" means in the backstabbing world of sat radio sports rights?

# 3150. KINL on 1942 Airmans Chart

Newsgroup: rec.radio.broadcasting
Date: 2004-12-08 18:21:31 UTC
From: ljbartel@juno.com
Message-ID: <cp7gnb$2ll$1@xuxa.iecc.com>
Source record: 3294

I have an old aviation Airmans Chart dated 1942. It shows a radio tower, KINL, just north of Juneau, Alaska. It does not list a height or frequency. Does anyone know if it was located at Lemon Creek, north of Juneau? Are the old concrete foundations seen there perhaps part of this station? KINY, still an active station, was listed on the chart as well. Anyone know where I can find more info in KINL?

thanks
LJB

Hardly sounds like a balanced analysis. Why so sour on Sirius? To me,
the latter has better and more diverse overall content--including
sports. But I wouldn't trash XM as a result.

Great points stated below. Here's my $0.02 worth...

I agree with the points stated below and add the follwing thoughts.

As for the hardware, I personally prefer the look of the Sirius products over XM. I prefer the Sirius boombox look over XM's. Both company's boomboxes sound great, however.

As for the music content they're the same with a few exceptions. Sirius lacks the equivelant of XM's channel 50 (XM50) and the only Kids content I found on Sirius is Radio Disney whereas XM has Disney and their XM Kids format-- both are loved by my kids, by the way.

What really sells me on XM is the baseball package. As a fan of several baseball teams I can honestly say my summers will never be the same from now on! Like the poster below, I love my football too but I budget my TV time and plan accordingly. Baseball goes over well on the radio. Football leaves a lot to be desired on the radio-- no matter who the announcers are.

Source record: 3153
Cross-posted to: alt.pirate.radio,alt.radio.pirate,alt.satellite.radio.europe,rec.radio.broadcasting,uk.radio

Peter Moore, Director of UK satellite broadcaster Radio Caroline, has published an update on the station's plans to get onto the Sky Electronic Programme Guide. On the Radio Caroline Website, Moore writes:

"The fund intended to get Caroline a channel number (EPG) on the Sky Digital platform, currently stands at a little more than £7000. Once this would have been very close to the required fee for the first year but as we know, Sky increased the yearly fee from £8000 to £20,000.

"We could have booked a channel number starting late November but both John Knight and I agreed that with only one third of the funding in place it was unwise to take such a big leap in the dark. So we are now in line for the next round of channel numbers issued well in to 2005. This gives us some months to raise more income.

"Listeners have asked whether this EPG is really going to increase our audience and we conclude that it will. Anyone listening for instance to Capital Gold will notice how much they promote their Sky channel number and how many of their callers are Sky listeners. Of course in competing with Capital and the many other stations on Sky we will continue to improve the quality of our programming."

## 3165. Radio revolution: the DRM way

Newsgroup: rec.radio.broadcasting
Date: 2004-12-13 03:16:31 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cpj1if$4n9$1@xuxa.iecc.com>
Source record: 3152
Cross-posted to: alt.radio.digital,rec.radio.broadcasting,rec.radio.shortwave

With clear, near-FM quality sound, excellent reception and dramatic improvement over analogue, Digital Radio Mondiale (DRM) will revitalize radio in markets worldwide.

Traditional AM can travel great lengths along the curvature of the earth, but it is notoriously prone to disturbances. The same holds true for short wave, which can reach the other side of the planet by bouncing a signal off the ionosphere. But its reception is prone interference from solar conditions, the time of day and year as well as the distance between the transmitter and the target receiver.

There is a global trend towards the adoption of digital technology in radio and communications, especially for distribution and transmission. Digitalization offers many substantial advantages to national/international broadcasters and info casters. We are seeing the introduction of high quality delivery systems in homes. FM sound broadcasting is gradually moving to a DAB standard. But coverage on FM 88-108 MHz (VHF) is limited. For many national and international broadcasters, the advantage of a complementary digital broadcast system below 30 MHz is gradually emerging. However, the limited fidelity of existing AM services is causing listeners to search for other alternatives.

Implementation of digital radio in today's AM bands (i.e. long, medium and short wave) will enable operators to provide services that should be successful with both existing and future high-quality services operating on other parts of the dial. Digital broadcasting on short wave, medium wave, or long wave (AM) is highly advantageous when compared to the conventional analogue system that is now in use.

Digital Radio Mondiale (DRM) is a fast emerging domain that combines the benefits of FM and AM. This has FM like sound quality with lesser multi-path interference and the reach of AM. Some DRM receivers and equipment are already available to broadcasters and consumers, with more expected throughout 2004. Besides providing

near - FM quality audio, the DRM system has the capacity to integrate data and text. This additional content can be displayed on DRM receiver to enhance the listening experience.

Unlike digital systems that require a new frequency allocation, DRM uses existing AM broadcast frequency bands. The DRM signal is designed to fit in with the existing AM broadcasting AM broadcast band plan, based on signals of 9 kHz or 10 kHz bandwidth. It has modes requiring as little as 4.5 kHz or 5 kHz bandwidth, plus modes that can take advantage of wider bandwidth, such as 18 or 20 kHz. Simulcast testing is underway. Many existing AM transmitters can be easily modified to carry DRM signals.

The DRM technology works by encoding the signal using MPEG 4 compression to make it fit the existing AM bandwidth. While minimizing interface, the digital technology has only two modes: reception and no reception. Hardcore short wave fans who appreciate the challenge of deciphering short wave broadcasts unperturbed by the notorious fading may lament this. But near FM digital quality makes short wave interesting for an audience that has never touched a world band receiver before. Another advantage is that DRM requires only 10% of the power needed for traditional short wave transmission and therefore, for broadcasters, new transmission equipment pays for itself. Furthermore, DRM allows for dual transmission mode, broadcasting analogue as well as digital.

DRM applications include fixed and portable radios, car receivers, software receivers and PDAs. Depending on broadcasters preferences, the DRM system can use three types of audio coding. MPEG4 AAC audio coding augmented by SBR bandwidth extension is used as a general-purpose audio coder and provides the highest quality. MPEG4 CELP speech coding is used for high quality speech coding where there is no musical content. HVXC speech coding can be used to provide a very low bit-rate speech coder.

Today, DRM is the world's only non-proprietary, digital system for short, medium and long wave with the ability to use existing frequencies and bandwidth across the globe. It is the only digital radio system recommended by the international telecommunication union (ITU) for all the three radio bands below 30MHz short wave, medium wave, and long wave. In January 2003 the DRM consortium took the first hurdle in

standardizing audio broadcasts on the AM bands when the International Electro-technical Committee (IEC) granted the DRM transmission technology an international standard.

Since DRM's inaugural broadcast on June 16, 2003, more than 60 broadcasters have started transmitting their daily, weekly or periodic DRM programs. Thereafter, an increasing number of broadcasters started their DRM transmissions. In August 2003, DRM and the World DAB Forum announced their cooperation, paving the way for DRM and DAB capable receivers. Sony has committed to help expand the markets for digital radio in Europe, pledging its active support in the commercial sectors of both DRM and World DAB Forum.

India remains oblivious to the benefits of such a platform; leave aside launching this technology. While speaking to India's only radio network in this context, few were even aware that radio was on the threshold of going digital!

The world's biggest amateur radio exhibition, the Dayton Hamvention http://www.hamvention.org/ , is to remain at the Hara Arena in Dayton, Ohio, until at least 2007. Over the years there have been persistent rumours that the Hamvention would leave Dayton. Now, the Hamvention General Chairman, Gary Des Combes, N8EMO, has announced a new three-year contract with the owners of the Hara Arena complex, which has been the venue of the Dayton Hamvention for nearly four decades. The 2005 Hamvention is scheduled for 20 to 22 May.

# 3169. What AM Station do you miss the most?

Newsgroup: rec.radio.broadcasting
Date: 2004-12-13 18:10:40 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cpklv0$12l$1@xuxa.iecc.com>
Source record: 3161

"What AM Station do you miss the most? Think broad: It could
be a station on the air currently, but you miss its prior format, or
it could be a set of call letters long gone from the dial."

IN THE 50's DALLAS TEXAS HAD SOME OF THE GREATEST RADIO.

>From 1950 to 1957, I had a 5 tube table model radio, with a long wire
antenna, 30 feet high and 100 feet long. I logged 37 states and 15
countries on that little radio. In 1957 I got a Lafayette KT-200 and
really started logging the stations.

I miss the radio shows of the 40's and 50's. Fibber McGee and Molly on
NBC, Edgar Bergen and Charlie McCarthy on the Chase and Sanborn Hour,
Kate Smith, Abbot and Costello, Martin and Lewis; I was a Communist
for the FBI; Damon Runyon theater; Superman; the Green Hornet; X-1;
all these and more can be heard throughout the week WBBM-780, but it's
not the same as was when I was a boy. Also every Saturday night KMOX-
1120 plays 4 hours of 'I Like Jazz' with Don Wolfe as host, followed
by 2 hours of When Radio Was.

KRLD 1080 in Dallas, TX. Comes to mind. They had American Airlines
Music Till Dawn, where they played real music. This was from 1957 into
the early 60's. None of this Lead Blimps falling from the sky stuff.
They also had the Dallas Texans football in 1959, but dropped them for
the new upstart team, the Dallas Cowboys, in 1960.

WBAP 820 Ft. Worth, TX when they had real country and western, late
60's and into the 80's when Hal Jay and Dick Segal came onto the
station in the mornings and evenings, along with Sam from sales.

I miss KIXL 1040 in Dallas, TX. Real music, nothing but real music in
1950's. No rock 'n Roll stuff. They would have from time to time, the
big movie stars of the day, like William Holden, come on as DJ's;
their "Thought for the Day" was always something uplifting and
inspiring, though not religious. Never any nasty jokes. Just good
radio. I remember the commercials for Woosey. This was a local soft
drink company. They had the best cream soda, strawberry, grape and
root beer.

WRR 1310 in Dallas, late 50's, with Jim Lowe, (also the voice of Big
Tex) and his morning drive show with music, news and his Caravan.

How about KLIF 1190 in Dallas, TX. When Gordon McLendon owned the
station it was a top 40 station from about 1955 to 1963. But McLendon
only played the good do-wop songs, never the trash that later became
Mo-Town. In the late 50's Gordon would play the news from Radio Moscow
and then give his commentary against communists. A lot of good it did,

just look at the mess this country is in today. He was also running for political office at that time.

>From the late 40's, I miss the old WFAA radio on 570 from Dallas, TX. I can't remember the name of the program that was on from 0600 to 0900 each morning. But it was a local breakfast club style show with live talent and local events. My mother would always listen. One such person who sang on the show, from time to time, was Dale Evans. This was followed by Don McNeil's Breakfast Club from Chicago.

In the afternoons, after school, on WFAA radio, I would always listen to "Big John and Sparkey" a great kids radio show. This was around 1951 or so. I remember in one week of episodes the two came upon a flying saucer. This was big stuff, and a hot topic in the early 50's.

KSKY 660 Dallas, TX. I remember they were a Christian radio station through the 50's and 60's, and they gave their call letters as "K-SKY, 6-6-0 on your radio."

KBOX-1480 "K-BOX 1480" In the late 50's and early 60's this was KLIF's opposite in the ratings.

There are so many calls that come to mind. In the late 50's, I remember when WSM-650 and WLAC-1510 (both in Nashville, TN) were nightly visitors. WSM of course, had the Grand Ole Opry every Saturday night. And us'n and our neighbors, who lived in east Texas, would gather at our house to listen on the car radio. Do a little danc'n in the yard.

WLAC had Randy's Record Shop. This was the sale of the worst recordings you would ever want to hear. But they sold. Also on WLAC, I remember the sales of baby chicks, to be shipped to your home. I just don't remember the name of the company.

There are so many stations that were had great radio, I couldn't possibly write them all down. Kids today have no idea how great it was. I didn't intend to write an essay, but I did. Thanks for your time, and for letting me to take a trip back to the jungles of my memoirs.

(Willis Monk, Old Fort, TN, NRC-AM via DXLD)

Hmm. I guess the US isn't part of "worldwide." Last I heard, IBOC was
the mistake of choice in the US. So far as I know only IBOC and Kahn's
CAM-D are the only systems in contention here, with CAM-D to roll out
soon with several stations on board and receivers coming soon. Are you
lumping DRM and IBOC together?

>Today, DRM is the world's only non-proprietary,
>digital system for short, medium and long wave with
>the ability to use existing frequencies and bandwidth
>across the globe.

CAM-D is compatible with all of the above. By "non-proprietary" do you
mean to say that the patent holders of DRM are giving it away with no
manufacturer's licensing fees?

I speak with a lot of stations. Not one has mentioned DRM as something
they're considering.

# 3172. Podcasting will 'revolutionize radio'

Newsgroup: rec.radio.broadcasting
Date: 2004-12-13 18:10:45 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cpklv5$16i$1@xuxa.iecc.com>
Source record: 3159
Cross-posted to: alt.radio.digital,rec.radio.broadcasting,uk.radio

By Karen Haslam

Podcasting - the Web's latest fad - has the potential to revolutionize the content of traditional radio as well as reshape our listening habits, according to The Christian Science Monitor.

Technology futurist and producer at Canada's CBC radio Tod Maffin said: "Podcasting is a radical way of looking at radio."

Podcasts are expected to become as diverse and niche-oriented as online blogs. For example, people will be able to subscribe to downloads that provide news from the stock market or updates on developments in a particular industry. Podcasts can be stored in iTunes and played on iPods or any MP3 players at the listeners convenience.

Podcast software iPodder co-developer Adam Curry said: "I venture there's about 33 million MP3 players out there, and after Christmas when everyone has their new cell phone, there's another 600 million cell phones that have MP3 capability - and they have a network connection."

Curry believes that these developments will challenge the dominance of terrestrial radio, writes The Christian Science Monitor.

Maffin agrees that podcasting will shake up radio - but in a good way. "The download medium provides stations with a new outlet for their shows. If the content is good enough, stations may even be able to charge consumers for downloading individual shows, just as some listeners now pay a premium for satellite radio."

According to the report the future of podcasting is niche radio.

Author of Rebels on the Air: An Alternative History of Radio in America Jesse Walker said: "On terrestrial or satellite radio, one can tune into a dozen formats or maybe even five dozen formats. But with podcasting, everybody is a format of one.

"Podcasting is just making it easier for this new set of niche listeners and this new set of producers to find each other."

KLIF became Top 40 in about 1953, right after the format popped out of KOWH
in Omaha. It continued being Top 40 through the 70's. They definitely did
play Motown, as their heyday was in the late 60's when they battled
Balaban's KBOX for supremacy in the Dallas market (which did not include Ft.
Worth at the time... KXOL was the big Top 40 there).

No, DRM signals are already audible all over the US. It's not legal to
transmit the stuff, but it's certainly legal to receive it, and there is
plenty of DRM shortwave stuff coming over the horizon.

Why am I so far ahead of my time? I was an early adopter of the first Rio
player
when I started doing this probably 5 years ago. Of course, I know of
people
that have been trading reel to reel tapes of airchecks for 50 years.

It is really nice when the que tones are left in the broadcast, that way you
can
use an audio editing program to search for the que tones and delete the
commercials
and PSAs!

## 3177. "A Nation's Station"

Newsgroup: rec.radio.broadcasting

The Story of Manx Radio 1964-2004 by Derek Winterbottom, with contributions from David Callister, Terry Cringle, John Grierson, Charles Guard, Alan Jackson, Chris Musk, Bernie Quayle, Su Richardson and Stewart Watterson.

Manx Radio made its first tentative broadcasts from a caravan parked in a field near Douglas in the summer of 1964 and it was officially opened in November that year. Manx politicians hoped it would quickly develop into another 'Radio Luxembourg', a successful commercial station which would broadcast into the UK and Europe, thus bringing fame and profit to the Isle of Man. These hopes were dashed by the determined refusal of the UK to grant the necessary broadcasting licence, a stance which created serious political tension between Douglas and London for several years, increased when the Island, in revenge, gave refuge to the pirate ship 'Radio Caroline'.

Eventually, Manx Radio had to accept a lesser role as the Island's national station, running on an uncomfortable mixture of advertising revenue and government subsidy.

This, in turn, led to many conflicts and misunderstandings and when Tynwald was tempted to sell Manx Radio to the highest bidder in the 1990s a furious battle began.

By the end of its first 40 years Manx Radio had just about convinced Tynwald that it needed substantial government funding in order to provide a good public broadcasting service, but by this time its monopoly on the island was being challenged by several new radio stations.

(More details at http://www.manxradio.com/ )

# 3179. BBC asks for three-year interval before digital radio switchover

Newsgroup: rec.radio.broadcasting
Date: 2004-12-14 22:45:51 UTC

Julia Day
Tuesday December 14, 2004
The Guardian

The BBC has asked the government to wait another three years before deciding when to force listeners to convert to digital radio.

Although digital radio is proving a success, the UK is not yet ready to switch over, the BBC said yesterday, as it submitted its vision for the sector to the government.

The report said setting a switchover date now would be "undesirable", and would unsettle the radio market and alarm consumers.

"Despite our commitment to digital radio as the replacement technology for analogue radio, we contend that conditions, namely accessibility, affordability and take-up, are not yet in place for switchover," the corporation said.

It suggested a joint industry scheme over the next three years to plot the migration of the entire UK market to digital.

The BBC believes switchover should not take place until digital radio services match those of analogue and plans are in place to ensure no organisation is left behind. It also wants the government to support manufacturers of digital.

The corporation has already hatched a plan to allocate and manage the radio spectrum, a strategy it believes will "deliver enhancements to all tiers of digital radio provision".

It wants five blocks of the so-called band III spectrum to be shared out across the entire industry to allow all BBC and commercial services to move over to digital.
Details of the report will be shared with Ofcom and the government. It reiterates the corporation's belief that digital radio is a "robust broadcast medium capable of cheap, mass production and integration into a variety of devices".

The analogue television signal will be switched off between 2008 and 2012. The government will announce the timetable and start preparing viewers next year.

The UK has the world's most developed digital TV market, with more than 50% of 24.5m households receiving a signal through BSkyB, the BBC-backed Freeview or cable. In contrast, only 4% of households own a digital radio

set.

However, the UK has between 100m and 150m analogue radios, and digital radios sets cost at least £50. Listeners would have to invest more than £1bn to reach the
current level of BSkyB's household penetration alone.

I miss the WLAC of the 50's and 60's. It was a rare source of blues and R &
B music during the time. I know we can't go back. . . some of the
personalities like John R. have passed on, and R & B has moved to FM.

WOKY, Milwaukee, way back 50 years ago. Johnny "Mad Man" Michaels, Luck Logan and of course Jim "Shamus O'Hara" Lawler.

And to Jay Scott -- you're mention of Clark Weber brought back memories of working with him at a small Wisconsin station. He had a great sense of humor and his success in Chicago was no surprise.

Without a doubt, WJR Detroit, "From the Golden Tower of the Fisher Building, The Great Voice of the Great Lakes". I heard it nearly every day from the 1960's through the early 1970's. It was a true full-service station, on the CBS radio network, when a radio network still meant something. As a kid, I preferred listening to Richard C. Hotelett's "The World Today" on WJR to watching any of the nightly news programs on TV, and Arthur Godfrey remained a staple there until 1972.

Local personalities J.P. McCarthy, Jimmy Lantz, Bud Guest, Karl Hass (now syndicated by WCLV in Cleveland, his "Adventures in Music" program is largely unchanged from those days), gave WJR's programming a variety that just doesn't exist in radio today.

I found this posted today, Thought I would share it with the group.

-JM

I WONT BE IGNORED

I may be a 70 year old man with nothing else going on in my life but I won't be ignored by a bunch of 435er's who I know is spending the day around their radios listening to everything said. I know you think I'm being obserd with my demands for "air-time" on your repeater but I want you all to be my puppets. Watch how I pull the strings here on 435.

My new "Rules Of The Road" for the 147.435 repeater:

I play my tapes when ever I want. You don't complain, You just listen - no turning off your radio - no talking over my taped message - no walking away to take a leak - NOTHING. I don't want my tapes interrupted for any reason whenever I choose to play them you will all need to stand by. If any parts of my taped announcements are interrupted I will punish the repeater with several hours of nonstop feedback. Even if my tape player fails for what ever reason I will punish the repeater for several hours with feedback. If you interrupt the feedback I will add one hour to my feedback schedule for each interruption. If the repeater times-out during my feedback schedule I will start the feed-back schedule timer over again. I will play my tapes over-and-over until I get tiered of hearing them. If when I un-key I hear any complaining I will play them again. When I stop playing my tapes and un-key you are free to start a QSO but keep in mind that as soon as you do so I get to jam over the top of you whenever I want with rude comments about your family background or telling you to "get the fuck outta here retard". You will not go to another repeater or any simplex frequency to continue the QSO that I interrupted, If you do I will call you jammers and proceed to play my tapes over-and-over again. If you don't start any QSO's on 435 so that I can jam them I will start kerchunking the repeater until someone complains about it and then I will call you jammers and retards. If the repeater is turned off while I am playing my tapes or interrupting your QSO's I will go to the output and complain that the repeater owner is a coward and afraid of my words and then make a chicken noise like this BOK BOK while calling him a chicken and a Riley supporter. No QSO will be permitted on 435 without including me in the round-table. If no one is talking and you want to start a QSO you first talk to me asking me how I am doing and if there is anything you can do for me.

As you can tell here my 435 rules of the road pretty much favor me over you in all points of conflict. I have all of the say-so about this

hobby and you have none. I don't care about how much time or money you may have invested in radio and repeater equipment, I mean business here. I may look and sound like a 70 year old senile man but I am a man on the edge. I have absolutely nothing to lose here and everything to gain. I will die sooner rather then later and I'll bet that my death will come long before the FCC and their slow bureaucracy can do anything about me. I have protected my property from possible vandals. I have protected my assets from potential legal confiscation. I signed over power of attorney to undisclosed family members to future protect me.

I am counting on you the 435 users to be my "squeaky wheel". I expect that you will get pissed off enough to daily contact authorities that will find that there is nothing more that they can do other refer to the same FCC and their slow bureaucracy.

Actually, you come to a person like me. I listen to the show. I tell
you how difficult it'll be and make sure you're serious and
well-funded enough to go through that process.

Be prepared to prove that the local show is very popular, both in
ratings and revenue and I'll lead you through the process.

Contact me at richwood@pobox.com and I'll give you my phone contact
and we can talk.

Rich

WJR went downhill fast in the late 80s, when some manager failed to notice
that you need some intelligence to host a show, and started putting on
lightweights and displacing the good guys.

Simultaneously, McCarthy lost it, coinciding with a Marconi award or
whatever it was, so even that attraction was lost. The WTF moment
for me was his noontime interview with the airline pilot that landed
the DC-10 without hydraulic systems on throttle alone, and the pilot was
building up to his crisis moment practiced in countless interviews, and
J.P. intervened with the remark that he himself used to fly a Piper
Cherokee, at which point the pilot lost interest in everything, saying
in effect yeah whatever, and that ended that.

So J.P. stopped thinking or seeing his job or something around then, or maybe
coasting, or maybe he had a stroke, who knows. That cost WJR huge.
Miss Pennypacker from the Blue Star Home supplied the only edge to his
morning show at that point.

So anyway, okay, people get old, but management has to know enough to
replace them with actual talent, which they don't and didn't.

I got a nice reply once from Jimmy Launce when I asked what the peaceful-
moment music was he used to play once a month or so (Kiri Te Kanawa
``O mio babbino caro''), asked from a distance of more than a decade.

They moved Launce from a great show in the evening to a morning show
playing ``guess what I'm holding in my hand'' to hold the attention of
droolers, which in fact is their audience today, long after the good
guys are gone.

I guess Clear Channel didn't help either, but they didn't start the decline.

Tom and Others:

When I was a kid growing up near London, Ontario, my dad owned a Hallicrafters SX-28A with a huge speaker cabinet and my mother used to listen to WJR regularly. Your mention of Bud Guest was timely, as she would listen to him on a daily basis.

My personal favourite station was CKLW in Windsor. I'd listen to that station 24 hours a day if allowed. I really began seriously listening to it during the summer of '65 when I went away to Army Cadet Camp at Ipperwash Ontario on the south shore of Lake Huron. It was one of those stations that the whole base listened to at the same time. There were certain songs that had every cadet reaching for the volume control when they came on, and the whole barracks would be shaking. One of those songs was "Satisfaction" by The Stones. Every volume control was cranked fully clockwise when it came on.

When I got into radio 2 years later, I started listening to understand the format and why the jocks did what they did. Three years after that, I joined "The Big 8" as a Transcription Operator and ran all the jingles, music, commercials, etc. for all the Big 8 Jocks. It was a real power-trip to be the one at the controls of that 50,000 watt clear channel powerhouse when it was the fifth highest rated station in North America during the spring of 1970 and we were pounding out the hits with the Drake Format under the direction of PD Paul Drew.

In my opinion, CKLW was the finest station to ever feed audio down a broadcast line to a transmitter site.

Golly I miss it!

I also listened to WLS and "Big 10 WCFL" a fair amount too, but "The Big 8" played more soul hits, and I ate that stuff up.

Regards,
Lee Smith

# 3196. World record for Digital AM Broadcasting announced

Newsgroup: rec.radio.broadcasting
Date: 2004-12-17 01:44:31 UTC

International electronics and systems group Thales has announced that a new world record has been reached in Macedonia for Digital AM Broadcasting. PE Makedonska Radiodifuzija (MRD), the national public broadcaster, in collaboration with Thales and Deutsche Welle (DW), succeeded in transmitting 720 kW mean power in Digital Radio Mondiale (DRM) mode from the mediumwave station Ovce Pole, the highest DRM power ever broadcast by a single transmitter, reaching exceptional coverage and quality of reception.

Transmissions were done on 810 kHz with the Thales' S7HP 1200 kW solid-state mediumwave analogue transmitter, in operation at Ovce Pole since its inauguration in June 2002. For the tests, Thales provided front-end equipment from its Skywave 2000 DRM Digital Product Line.

The necessary measurements of the signal quality and coverage area were performed by DW using their measurement van and various fixed control and measurement centers in Europe. Measurements were carried out twice a day: 3 hours during day time -groundwave propagation- and 3 hours during night time - skywave propagation- while transmitting the program of Macedonian Radio. The DW measurement van confirmed a coverage area during daylight of up to 300 km, whereas by night the DW centers recorded reception over larger areas of Western Europe. The audio quality was excellent and disturbance free.

# 3197. FCC refuses to censor satellite radio

Newsgroup: rec.radio.broadcasting
Date: 2004-12-17 01:44:32 UTC

By The Associated Press
12.16.04

WASHINGTON - The Federal Communications Commission rejected a request yesterday to begin imposing indecency standards on satellite radio, where frequent agency target Howard Stern is taking his show.

The FCC's media bureau turned aside a radio station owner's request that broadcast indecency regulations apply to subscription satellite services.

Saul Levine, who owns three radio stations in California, asked the commission in October to modify its satellite radio rules to include an indecency provision similar to the one that governs broadcast stations using public airwaves.

In a letter to the FCC, Levine complained that the commission needed to create a "level playing field" in protecting the public interest. "Indecent programming has been and continues to be an ongoing problem - as clearly evidenced by the number of monetary sanctions over the past few years," he wrote.

The agency, in a letter from media bureau chief Kenneth Ferree, declined Levine's request.

"The commission has previously ruled that subscription-based services do not call into play the issue of indecency," Ferree wrote.

Levine, who is president of Mt. Wilson FM Broadcasters Inc. in Los Angeles, says the dismissal amounted to a double standard by the FCC.

"The commission is saying it's fine to have obscenity any time of the day or night on satellite radio even though satellite radio is being made available to people without subscriptions," such as in rental cars that come with free service, Levine said in a telephone interview.

Stern, who has repeatedly railed against the "censorship" of the FCC, has been involved in the two biggest radio fines imposed by the agency. That includes a record $1.75 million settlement reached over the summer.

In October, he announced his move to satellite radio and said "the FCC ... has stopped me from doing business." He debuts in January 2006 on Sirius Satellite Radio.

December 15, 2004

LOS ANGELES (Reuters) - After grabbing the spotlight by signing shock jock Howard Stern and launching a palm-sized portable device, hopes are high for satellite radio companies, which are expected to show off navigational, video and recording capabilities next month.

XM Satellite Radio Holdings (Research) and rival Sirius Satellite Radio Inc. (Research) have amassed nearly 4 million subscribers collectively. Expectations for growth are high, with Sirius stock up by triple digits since it nabbed Stern and hired radio veteran Mel Karmazin as its CEO.

Rumors that Sirius and Apple Computer Inc. (Research) were going to announce next month at the Consumer Electronics Show or MacWorld a deal to bundle iPods with satellite radio have added to the sector's buzz.

Sirius and Apple declined comment on the rumors, but analysts said it seemed technologically unfeasible right now.

"I don't believe Sirius' chip set is at the point where it can go into an iPod. It's the size of a credit card, and an iPod would need a chip set the size of a thumb nail," said April Horace, a Janco Partners analyst.

That's not to say the industry is not thinking about it. After launching its wearable MyFi device in October, XM chief executive Hugh Panero said he believed one day a portable satellite player would be combined with a device like an iPod.

"We've had on-and-off conversations with people in hardware and software over the years," he said.

Sirius chairman Joseph Clayton has said over the past several months that when Sirius has its third generation chip set ready, expected by as early as late summer, it will enable Sirius to make a device similar to the MyFi.

At the consumer electronics show, XM will demonstrate products like the MyFi and its SKYFi2 plug-and-play radio, the first satellite radio with pause and replay features.
Industry sources expect Sirius to showcase new recording capabilities for existing products.

"Consumers want to take their music experience and flow with them. That's why recording capability and storage capability will be huge in the vehicle and in the home and wherever you go," said Clayton last week in New York.

Traffic navigation will also be a big topic. Sirius has just announced it will offer updated traffic data that can be integrated into car navigation

systems, combining route guidance and mapping.

XM offers a traffic service with Honda Motor Co Ltd. that feeds XM's real-time traffic information into the map on a car's navigation system.

Both XM and Sirius demonstrated video capabilities last year and will do so again this year, but video via satellite radio is still evolving. XM has said it is waiting to see if there is a sound business model and demand.

In addition to more car radio announcements, PCMag.com editor Jim Lauderback expects more third party gadget makers to jump in on the satellite radio bandwagon.
"We'll see consumer electronics vendors like Pioneer and Sanyo showing more satellite products as they become more popular and less expensive," he said.

Meanwhile, traditional broadcasters Clear Channel Communications Inc. (Research) and Cox Radio Inc. (Research) are expected to unveil accelerated plans to roll out digital AM/FM radio.

Source record: 3189

Radio Prague may carry its programmes in English and German on longwave in the future. In answer to a listener's question on Sunday's Mailbox programme, Radio Prague Director Miroslav Krupicka said: "It is not reality at this moment but we are considering going on longwave in English and German. It's a longwave that is used by a domestic channel of Czech Radio, Czech Radio 1 - Radiozurnal, which broadcasts on the FM network and on longwave [270 kHz, 750 kW]. We are in talks with this station to give us a certain space on longwave in order for us to be heard beyond the border of the Czech Republic in, say, Germany, Austria and Poland because longwave travels further than medium wave, for instance, or FM, so we would be heard in Central and Eastern Europe on longwave quite well. Of course, this is an addition to shortwave broadcasting. We are always on shortwave, we will stay on shortwave, but in addition we are looking for tools in order to be heard both in the Czech Republic and in Central Europe. In the Czech Republic we are currently on FM in Prague in English, this is a service for tourists, people visiting the Czech Republic, businessmen and so on. It's quite appreciated by the audience from what I have heard. And to expand on longwave would be quite nice, so we are working on it, but it is not yet reality."

16/12/2004

The Broadcasting Commission of Ireland has said it intends to licence more radio and television stations and crack down on stations that fail to abide by licence conditions.

The plans are among 11 goals set out in the commission's strategic plan for the coming four years.

The BCI also said it wanted to promote plurality of ownership.

-- Use this CD-ROM to find shortwave broadcast stations worldwide, plus utility stations from 0 to 30 MHz!

Broadcast database: 9,336 entries with the latest schedules of clandestine, domestic and international broadcasting services on shortwave. Compiled by top experts in this field with the assistance of more than 100 experienced collaborators and monitors worldwide.

Utility database (Red Cross, United Nations and more): 10,092 special frequencies from the international bestseller "2005/2006 Guide to Utility Radio Stations." Plus 930 abbreviations and 20,224 formerly active frequencies, all on one CD-ROM. Browse through all that data in milliseconds, and search in next to no time -- even combined! -- for specific frequencies, countries, stations, languages, call signs, and times as well. It can't get faster than this! Includes the superb digital data decoding shareware program RadioRaft by French radio amateur F6FLT, and 321 new WAVECOM digital data decoder screenshots in original format with full colors. This product is based on 36 years of experience in the radio monitoring and publishing field!

Easily connects to leading receiver control programs: controlling your equipment by means of this frequency database is now only a mouse-click away! A powerful concurrent full text word search is included, too.

Great for the international radio listener, a businessperson or a tourist traveling worldwide, a professional monitoring service, or a circumnavigator sailing around the globe: This is the way -- just a few keystrokes and you have it all!

CD-ROM for PCs. Runs under Windows 3.1/95/98/2000/ME/NT/XP. © 2004 by Klingenfuss Publications, Germany. #9528 -- $29.95

Dear All,

we kindly would like to inform you about the schedule of Pan American Broadcasting using shortwave transmitters of T-Systems in Germany:

Target Middle East:
Saturdays, 1400 to 1430 UTC, 13820 kHz, program name "Sedayeh Mohebat - World Radio"
Saturdays, 1445 to 1500 UTC, 13820 kHz, program name "David's Mighty Men Evangelism Team"

Sundays, 1500 to 1515 UTC, 13820 kHz, program name "Waymarks"
Sundays, 1530 to 1545 UTC, 13820 kHz, program name "Victory thru Truth" starting 02. January 2005
Sundays, 1545 to 1600 UTC, 13820 kHz, program name "God Speaks Today"
Sundays, 1600 to 1630 UTC, 13820 kHz, program name "Bible Says"

Target India:
Sundays, 0030 to 0045 UTC, 5945 kHz, program name "Bold Bible Living"
Sundays, 1430 to 1445 UTC, 13820 kHz, program name "Banner of Truth" starting 02. January 2005

Target Moskau, Russia:
Wednesdays, 1630 to 1645 UTC, 6015 kHz, program name "A Brighter Day Ministries" starting 05. January 2005

Please feel free to forward this schedule to anyone and DX Clubs whom you like.

Any reception report would be highly appreciated. Feel free to send it directly to PAB under:
cjung@panambc.com
and under CC to ralf.weyl@t-systems.com

Warm wishes for Christmas and a Happy New Year,

For sale:

(The "Radio Crazy" is baaaaaakkkk!) Hi!

Partial interest in AM daytimer in small Alabama city of about 11,000 population. Total asking price of the station is $70,000 with $10,000 down, seller financing. No real estate is included. Studio rent is $360.00 a month and tower site rent is $200.00 a month. Station is on the air since 1974. 1,000 watts, non-directional, daytime only.

Transmitter is an all solid state Harris GATES ONE.

I need one investor with the $10,000 down. For this (besides my everlasting gratitude)I will gladly award you 25 percent ownership and a seat on the board with full voting rights. (A Corporation will be formed, silly!)

I am former Chief Engineer for a NYC AM station and was the past President and founder of an FM in San Francisco which is on the air since 1973.

My tel. in Macon, GA is: (478)741-1710. Please feel free to call anytime. Don't mask the caller ID please, the system will reject the call. If you are paranoid, email me instead. wrecktech@yahoo.com

73,

Meyer Gottesman, W6GIV

If I had to narrow it down to one station, I'd have to say WLS/Chicago during the 1960s. Like most teenagers in mid-America I tuned in every night because they had the Top 40 hits days before my local stations; but as much as I enjoyed the music, I loved the disc jockeys even more! Those were the days of "personality" deejays who understood how to entertain the audience between records, but without forgetting that the music itself was the reason they were there. Dick Biondi, Ron Riley, Art Roberts, Clark Weber -- these were the heroes of my youth, and instrumental in my getting into radio myself.

I suppose if I had grown up a little closer to New York I'd have felt the same way about the WABC Good Guys -- but WABC just didn't get into West Tennessee all that well, while WLS boomed in.

# 3207. BBC boasts huge take-up of radio downloads

Newsgroup: rec.radio.broadcasting
Date: 2004-12-18 18:00:08 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cq1r78$e9b$1@xuxa.iecc.com>
Source record: 3202
Cross-posted to: rec.radio.broadcasting,uk.radio

BBC Radio today announced that a trial of an MP3 downloading service, which saw 70,000 downloads of Radio 4's In Our Time programme in November, had been a massive success.

Episodes of the Melvyn Bragg-fronted discussion show, which looks at the history of ideas ranging from the theory of thermodynamics to Goethe's drama Faust, were made available to download in full in MP3 format for seven days after the broadcast date.

This "podcasting" service allowed the shows to be saved to a computer or a personal player such as an iPod, enabling the user to listen to the show even if they are not logged on to the BBC Radio website.

Using download applications such as iPodder, In Our Time could be "tagged" and automatically downloaded as soon as the latest edition of the show was made available online.

At present BBC radio shows can be listened to live over the net, or "on demand" after the date of original broadcast, with the user required to be logged on to the relevant BBC Radio site.

Simon Nelson, controller of BBC Radio and Music Interactive, said: "We've been surprised and delighted by the demand for downloads of what is one of our most challenging programmes.

"It demonstrates the public's appetite for new ways of listening.

"Of course we recognise that we can't offer all programmes in this way but we look forward to working with rights holders to explore ways we could learn from developments like this to drive radio listening forward."

This is the second of the BBC's radio download trials, with Nobel prize-winning poet and playwright Wole Soyinka's 2004 Reith Lecture series on the Climate of Fear on Radio 4 receiving 50,000 downloads in April and May this year.

BBC Radio's online services have received a boost recently with the news that Radio 4's production of sci-fi comedy Hitchhiker's Guide to the Galaxy has had over 1 million on demand listens, and that an unprecedented 6.2 million users visited BBC Radio websites last month - an increase of 55% on the November 2003 figure.

Forty-eight per cent of visitors to BBC Radio sites also made use of online listening services, with Chris Moyle's Radio 1 breakfast show overtaking The Archers as the most popular on demand BBC show, the self-styled saviour of Radio 1 getting 395,000 listens in November.

I think domain names are cheap and so are web pages. It doesn't take
spending much money to give your operation a more professional look.
When someone uses a long URL or free web page:
1) The page itself is annoying, with pop-ups and banners everywhere.
2) It tells me that the "owner" is not that serious about his image.

Consider your domain and web page image!

The station that I miss the most is 15KSTP The Music Station from St. Paul, Minnesota.

Although I have never been to the land of four zillion lakes, KSTP boomed into Saskatchewan and that was good enough for me. Hines and Bush, Big Al Davis, Scott Shannon, I liked.

WPTR Albany, New York weren't too shabby either.

Sirius does have Kids Stuff on channel 11. If you can handle listening to Barney and the like I suppose it's good stuff.

I have had a few friends that have listened to both Sirius and XM and can't hear any difference. If you are a baseball fan, then XM is the way to go.

# 3212. Beautiful Music Radio

Newsgroup: rec.radio.broadcasting
Date: 2004-12-18 18:00:13 UTC
From: Don <calldonREMOVE.IT@something.net>
Message-ID: <cq1r7d$ea5$1@xuxa.iecc.com>
Source record: 3203

Well, I really couldn't find what I wanted so I started one myself. I have enough LPs to paper a multiple-story building. Now, I can play them and other folks can enjoy the music too. I hope this shameless self-promotion here is OK. I have been reading this group but rarely post.

http://ct1.fast-serv.com:8314/listen.pls

Beautiful Music Radio - AirstreamFM is a format that used to be called "Easy Listening Music" or "Beautiful Music." You will hear mostly instrumentals, tons of strings, flute and oboe solos and piano...just my style of that Great American Invention...ELEVATOR MUSIC!!

This is the SECOND PHASE of our Test Broadcast...

For this second phase, we have increased the quality of our stream to 128K for CD-quality sound. Most "broad-band" users will have no problem with this stream.

The Beautiful Music Radio -AirstreamFM playlist has around FIVE-THOUSAND SONGS and growing. The majority of our music is from the TWO THOUSAND "LPs" we have in our collection. However, for this TEST BROADCAST, we began with 1700 songs and have increased that to just over 2600 Beautiful Music tracks.

Mecia Hack <@NOT.yahoo.com> had written:
|
| >>>"What AM Station do you miss the most?

My top two candidates:

WLS from the early 1970s through the mid 1980s -- always creative,
always just a little bit out of the box, always listenable.

KRBE(AM) Houston when it was "Classic Rock 1070" in 1985-86.
Imagine a station that would play the Thirteenth Floor Elevators.
In C-QUAM stereo, indeed.

========

But that's AM. The FM stations I miss most are the Entercom-era
KITS/Live 105 in San Francisco (until about 1997?) and the
"Rock 40" KXXR in Kansas City (1989-90). Both stations were
willing to bend the playlist and absolutely did not take themselves
too seriously, with personalities who had just enough of a sarcastic
edge to them. Both KITS and KXXR were both fun stations to listen to.

The current KITS is a pale shadow of what it used to be.

When a friend and I were 14, we built a little 100mw station for our
town. There was no station in the entire county, it was like
Mayberry. We went to a station in a neighboring town with his
brand-new cassette recorder ($100). We stuck it in the insulated
closet where they had the newswire and let the sucker run for around
20 or 30 minutes.

Then, when we went on the air of our 100mw station, reading the news
from the local paper, we played our "newswire" in the background.
Sounded pretty real if you ask me.

The Associated Press
Sunday, December 19, 2004

A small plane crashed this morning into a radio station tower in La Mirada, killing two people aboard and temporarily knocking the station off the air, officials said.

The single-engine Cessna plane struck the KFI Radio tower about 9:49 a.m. and the tower tumbled to the ground, said Andrea Hawkins, a dispatch supervisor with the Los Angeles County Fire Department. Television footage showed the 900-foot tall red-and-white tower in pieces on the ground surrounded by plane wreckage.

A man and woman were pronounced dead, Hawkins said. A small fire also was extinguished.

KFI, a talk and news station, was off the air for about an hour following the accident, said Leslie Lotto, an editor at the station.

A telephone call to the Federal Aviation Administration was not immediately returned.

Further details of the massive job cuts at the BBC were unveiled on Friday.

They come after last week's announcement by director-general Mark Thompson that 1,900 posts would be axed from support services and the factual and learning department.

It was revealed most of the first wave of support cuts will come from BBC People - the human resources division.

Half of its personnel staff will go - 550 out of 1,100. But 350 of those will be outsourced.

More than 540 jobs will go in finance and property, which has a workforce of 1,100. Out of 500 marketing jobs, 119 will be ditched.

In policy and legal, 60 out of 120 jobs are to be culled. And in strategy and distribution, 20 jobs have been earmarked out of a total 60 staff.

About 65 posts will go from learning, 112 from specialist factual and 230 from documentaries.

Individual staff, however, still have to wait until after Christmas to find out if they are to lose their jobs.

Nationally, WLS and WCFL were tops in my book. The 70's radio war between these two giants was awesome.

Later, I came to enjoy the "folksy-ness" of WOWO and Joe Donovan's Rock & Roll Revival (probably the first onscure oldies show anywhere) overnights on 84 WHAS.

Locally, I miss Charleston, West Virginia's 95 WKAZ. Big time Top 40 radio in a smaller market. Their crosstown battle with 1490 WXIT was simply a local version of the WLS/WCFL duel, with both stations raising the bar in the market and creating some really great radio.

MEDINA???

I can't believe it. I just started reading this group again after
being too busy for many months.

I also was raised in west Tennessee, Crockett County. I was a
musician as a teen and enjoyed late-night driving in west Tennessee
after a gig. On clear nights, I would listen to this great station
from Cincinnati, I think it was WLW. All easy-listening (AM) and no
announcements regarding the music, just a station ID and an occasional
spot. But for AM, WLW was VERY laid back in the late 1960s/early
1970s. The other station I enjoyed was WWL from the beautiful Blue
Room, high atop the Roosevelt Hotel in downtown New Orleans. Similar
music format. Great signal to west Tennessee.

There was "Music 'Till Midnight" on WREC AM60 in Memphis. What a
great show. The founder of the station, Hoyt B. Wooten, tried to give
WREC the finest sound technology would provide. He was famous for his
underground bomb-shelter, so large that he used to throw parties
there. And WREC had a fabulous "sound" compared to other AM stations.

Then...there was Dolly Holiday and "Holiday Inn's Nighttime" The
first "rock" FM station in Memphis, FM-100 WMC would play the

Beatles's "Good Night" at midnight, then ole Dolly Holiday would come on for the next 5 hours or so, playing Jackie Gleason, Bobby Hacket, Mancinni and all of the other slurpy, mushy music that I really loved. In the early 1970s, I did a few "live shows" with her for some group at the main Holiday Inn on Lamar in Memphis. One day, we went back to her office, down the hall in one of the buildings of the Holiday Inn headquarters. Before I knew where we were going, I looked up through the double glass windows of a "radio studio." It was her studio where she recorded the program. Looking back now, I kick myself for not nurturing that relationship, bringing a camera and taking some good photos.

That was back in the day that 7/11 stores opened at 7am and closed at 11pm.

<Thinking out loud>

Gosh, I wonder where her record library is now? As far as that goes, I wonder where the WKBJ-FM record library is now???

</Thinking out loud>

I used to work at WKBJ-FM in Milan, easy listening from those wonderful LPs. AM played country-music with too many cheap commercials and sounded terrible!!! FM was "easy listening" and played only 1 or 2 spots per hour. This was in 1969, before they automated in 1970.

Just a few weeks ago, I began experimenting with my own BEAUIFUL MUSIC Internet Radio station. Give it a listen.

http://ct1.fast-serv.com:8314/listen.pls

I have over 1000 LPs of just the easy-listening/beautiful-music genre. It takes a while to record them into the computer, in real time. But the music can't be beat. I am working on this project a little at a time.

I have been in Dallas for 22-years and have seen a few changes even here. Occasionally (which is not very often) I will be away from the city at night, away from the interference and the thick, overloaded local AM band. Usually, that is on one of my trips back to Tennessee. I still try to tune in those good old stations. But radio is not what it used to be. I can never find an AM station, playing that type of music at night. So I listen to tape-delays of the talk-guys, still not too bad. But...even with digital, stereo satellite broadcasting static-free entertainment directly from the sky to your car radio, nothing will be quite the same as a summer-night's ride on the dark, rural highways, with the full-moon shining and music coming from far, far away, from WLW or WWL with their easy listening, or even the great jocks at WLS in Chicago.

Duke, Duke, Duke, Duke of Earl, Duke, Duke, Duke of Earl, Duke, Duke, Duke of Earl, Duke Duke...well you get the idea.

Check out Beautiful Music Radio, built by a Tennessean and enjoyed by the world!

I'd guess that they're retained mainly because they are a useful
signal that the news is coming up. Now that MSF and
DCF-controlled clocks are in the shops at less than a tenner, the
GTS has lost its unique value.

I listened to them back then too ... well, maybe a couple of years earlier, since I enlisted in the Army in 1968. Don't remember a lot about WLW, but I'll never forget those "King Edward cigar-time" timechecks on WWL. I listened more to WKYC (now WTAM) in Cleveland ... and WLS, as I mentioned earlier.

Like so many AM stations today, WREC is a Clear Channel-owned talker.

I had forgotten that FM100 aired Dolly Holiday's program! Following a progressive-rock format with "Holiday Inn's Nighttime" always seemed a bit strange, but somehow the people at FM100 kept the transition from being too jarring. Sadly, the riverboat-whistle ID hasn't been heard on that

station in a long time. Scripps-Howard sold the WMC-AM/FM/TV operation a number of years ago; Infinity owns the two radios, and I think Raycom still owns WMC-TV5. (All three still carry the WMC call letters.)

> Gosh, I wonder where her record library is now? As far as that goes, I

I think Bill Haney and (the late) Larry Dunphy divided it between them. Wish I had been around to ask for Nancy Sinatra's "Sugar" album -- that album cover, with Nancy wearing the pink bikini, used to sit in the control room window when I was working FM. (Hey, I was just a teenager ... and Nancy Sinatra was wearing that pink bikini .... )

You had commercials? I was there in 1968, and we almost never had commercials on the FM side; just three breaks an hour for weather and one at the top for news. AM paid the FM's expenses most of the year, but FM made money each fall and winter with Milan High School football and basketball broadcasts.

Today the old WKBJ-FM is all grown up. Changed owners in 1983; callsign changed to WYNU in 1984; went from an ERP of 28,500 watts at 160 ft. HAAT to the full 100kw at 1,050 ft. Current owner is Clear Channel, and it's playing classic rock. The AM is dark, sadly.

# 3227. Telephone-audio processing for FM-radio

Newsgroup: rec.radio.broadcasting
Date: 2004-12-21 17:36:50 UTC
From: DiPool <DiPoolREMOVE@CAPSskynet.be>
Message-ID: <cq9mvi$aqm$1@xuxa.iecc.com>
Source record: 3214

Hi Folks,

First of all: should this be the wrong group for posting such a question, please inform me...

I am currently searching for the best way to process telephone calls for on air use. The calls are recorded through a good hybrid, go through a DBX comp/gate and end up in Adobe Audition. I never use complete calls, only 30-sec quotes are used. Right now, I have a decent setup, and the calls are processed through an Audition script. The script does EQ and dynamics (compression/limiting).The hard/software setup can't change. But I'm looking for the best way to process the quotes, for optimum clearness and loudness on air. What are the steps I should take?

Thank you for your suggestions!

DiPool

## 3228. Re: What AM Station do you miss the most?

Very easy. KYA 1260. They had the best jocks, promos and music (for the most part. Even they fell into the Beatles-Beach Boys-Supremes trap when it came to oldies) during the 60's and 70's. KFRC was the copy-cat around here. Some people think the opposite is true but Bill Drake programmed KYA long before he consulted the RKO stations.

The death knell happened on November 1, 1977 when King Broadcasting took over and ruined it. They even killed-off its sister station KYA-FM (Y-93). When they sold KYA-AM, the new owners even junked the call letters. I wouldn't drop a three-letter call for anything. Had I ever thought KYA would fall by the wayside, I would have taped hours of it.

# 3229. Bozo Engineers @ ClearChannel?

Source record: 3220

[Originally posted to the WSJ w/copies to here and ba.broadcast, the latter of two which, failed to make it,....?]

To: morning@wsj.com

I'd ask if they had chimpanzees running the station at KNEW, Talk 910, San Francisco, but that would be an uncalled for slur on the chimps who can walk and chew gum at the same time.

I was out working out this morning and tried to listen to your program [Morning at the WSJ] but what I got, again [happens VERY frequently] was

several channels being played on top of one another. This is when asleep-at-the-wheel on the part of the station is: 1.) listener abuse; 2.) client abuse; and, 3.) customer abuse. It's a How-To "Dis" everyone,

all at once, at the same spot on the dial.

Ah, but this morning's programming run amuck, was a classic: they ran commercials paired with inappropriate sound checks for "Bill Bennett's Morning In America" program [that had already run] in front of you, then

laid down a layer of John Phillips Souza's rendition of Stars and Stripes Forever. Sort of reminded of Jagger's, "Out of Control" -- only he looks MUCH better at it.

You need another outlet for your programming here.

You're not too hot yourselves in refusing to post program summaries in the face of repeated requests let alone stream audio of your shows post airing.

Not to worry. Santa's going to bring an iPod so I'll be able to carry along better, reliable programming.

# 3230. Jack Carney & the Saturday Morning Comedy Show

Newsgroup: rec.radio.broadcasting
Date: 2004-12-22 06:12:40 UTC
From: philmon <philmon64@hotmail.com>
Message-ID: <cqb38o$5m9$1@xuxa.iecc.com>
Source record: 3219

I have some very fond memories of listening to Jack on KMOX 1120 in St. Louis on Saturday Mornings when I was a teenager.

He was like a friend on the radio, just chatting with you, casually mentioning the products he was tasked with advertising, weaving them right into the fabric of his show like he was your pal and he'd just tried a box of those DeBrand's candies and boy, I should really try them, they're so good ... and playing a lot of old radio comedy.

When you're a kid, you think the world will go on that way forever -- but not so. His untimely death in 1984 was a sad blow to me even though I was away at college and pretty much out of KMOX's realistic reception area.

It's Christmastime again, and that always gets me to thinking of some of the great Christmas comedy routines he'd play on his three hour show, usually for the last two saturdays before Christmas. I loved all of his shows, don't get me wrong. Anyway, I was just thinking wouldn't it be great if I had saved just one of those tapes of his shows from when I was a kid?
And then it occured to me -- what if somebody else had?

Know of any?

Actually, the AM is back, kinda. It's moved to Lakeland (a Memphis
suburb) and resurfaced as religious station WMQM with 50,000 watts
daytime, 35 at night. Most winter days I can hear it here in Cheatham
Co. all day long.

I'm hearing lots of stories about the availability of AM licences in
France.

What is happening over there are do you by any chance have aq list of
the licences with city and EMRP levels?

Are these licences put up for auction or is it a case that any group can
apply to your authority's?

There is a program called SDP that stores streaming microsoft media to disk, I want to know if saving permanently of legitimate streaming internet radio stations is legal or not. I know there is a law for vcr recording of TV stations that say it is legal to record tv shows, but not for "archival" purposes, which I interpret to mean that the recording can not stay permanent. Does internet radio follow the same rules? Thanks.

****Calling All Songwriters****

I really really want you to check out my new DIY community radio station in the making at http://www.instatone.com considering you are a songwriter and probably know tons of awesome songwriters to forward this too??

Invite only because we are testing:
LOGIN:
u/n alpha
p/w t3st3r

What It Is

----------

Instatone is our commercial-free membership-driven DIY Internet radio built by musicians for musicians. We strive to introduce the cool kids on the block to great new original better bands while building out a much higher quality music community and radio station in the process. We've created a 100% democratic way to generate a song's rotation in the radio's mix. In the land of Instatone, all Instatone members are the DJ-Collective.

you gots to be a member to upload and rate but alas, it is free, free, free to you who is not too cool to be the fool. Can you sing better than Calvin Johnson? Do you spend hours in the closet with a microphone and a can of beer? Then sign up today!

To register click "login", then "register"
Go to your email and confirm your account.
Then update your profile w/ a high school pic and nerdy bio then upload away - hey, make sure it's all your own creative stuff and nobody else's (if you're in a band that is cool so long as they're cool with that, yo) upload as much as you want - no sellout crap allowed!

we'll start broadcasting once we get lots and lots and lots of never-before-heard dirty gritty brilliant edgy uploaded ORIGINAL SONGS so you can actually listen to the radio station commercial-free with very few repeats (right now we have NO MUSIC!), see your song ratings and rankings by other totally shy hipsta wannabes and let us know what you love and hate about the site- a feedback form is on everypage.

How it Works

----------

Think of Instatone as the world's greatest online talent show. The system is all real-time, meaning unlike other radio stations you will never know what gets played next; that's because Instatone is based on a realtime "rate-and-rank" system fully utilizing the power of the Internet and the latest "database technologies."

You will be given an unlimited amount of original song uploads (MP3s) for free. These songs will be hosted on our radio streaming server. Unlike all other internet radio stations we have seen, ALL SONGS must be your own. And unlike other 'unsigned bands'type radio stations, all you have to do is upload and your song is guaranteed to play on our radio. You don't have to mail it in. That removes any bias, except a collective bias, out of the music choosing process. If your song is on a c.d. and you have no idea how to turn it into MP3s, get a friend to help you or email me. But I recommend downloading ITUNES onto your computer right now, since when the radio is up you will want to tune in.

At that point (once we have music) you can start rating the music on Instatone and "instantaneously" influence the destiny of the playlist. Just click on the stars to rate. Since it will be a small group of you with the guts to play with this insane system most of the music playing will be your own (and no, you can't rate yourself) and a handful of others indie daredevils. As the site grows and evolves only your most popular songs will be played with any amount of noticeable frequency, and sorry, your least popular songs (not necessarily your personal favorites) will have a much less likelihood of being played until they fall off the instatone charts altogether.

That's it!

REPORT ALL BUGS!!

---

Kindly use the feedback form on the right side of every screen to report bugs and send messages to the developer company. Do not send comments
or suggestions to my personal email address as it will NOT be logged into our system. We will review all correctly submitted feedback and will fix the bug / consider your suggestion.

# 3238. Pirate radio calls for inauguration protests

Newsgroup: rec.radio.broadcasting
Date: 2004-12-23 16:03:58 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cqeq9e$49g$1@xuxa.iecc.com>
Source record: 3225
Cross-posted to: alt.pirate.radio,alt.radio.pirate,rec.radio.broadcasting

Wednesday, December 22, 2004

Washington (CNN) -- An unauthorized radio station in the nation's capital called for "massive protests" in the week leading up to the January 20 presidential inauguration.
The station broadcast Wednesday at 1680 AM and identified itself as "Guerrilla Radio, WSQT."

During the identification message, an announcer said, "WSQT is a project of urban activists in the D.C. area working on housing issues, homeless issues, issues of war, issues of occupation both at home and abroad, and issues of the environment that we all have to live in."

After being tipped by a reporter, an official with the Federal Communications Commission said enforcement investigators will try to pinpoint the transmitter using direction-finding equipment.

Other programming featured rap music with urgent, unsettled lyrics that were generally shouted instead of sung. The station's poor audio quality made the vocalizations nearly unintelligible.

An unidentified announcer said, "It's time to say no to Bush and no to a ban on abortions."

The announcer also called on the Supreme Court justices to "get off your butts" and free people unfairly imprisoned on drug convictions, and further stated that "we know you can hear our signal up there, and all you people in Congress."

There is no authorized radio outlet in the Washington area on the frequency used by the protesters, federal records show.

CNN monitored the signal on a conventional car radio as far away as the Maryland suburbs, about 10 miles from downtown Washington.
An FCC monitoring station is within reception range of the signal, the agency official said.

There was no immediate response from the station to an e-mail requesting an interview. The e-mail was sent to an address mentioned in the broadcast.

A number of anti-Bush groups have planned protests around Inauguration Day. Organized events range from demonstrators turning their backs on President Bush to war protests.

The anti-war, anti-racism group known as ANSWER has announced a demonstration along Pennsylvania Avenue as the president travels from the U.S. Capitol to the White House.

A statement at www.ANSWERcoalition.org calls for participants to claim spots by 9 a.m.

Another group has urged demonstrators to come to the official public ceremonies and then, at a set time, to turn their backs collectively on the president. The group is organizing on the Web at www.TurnYourBackOnBush.org.

A third group, www.ReDefeatBush.com, seeks to focus attention on perceived voting irregularities in the November election.

(CNN's Paul Courson contributed to this report.)

I don't know why the recording of any media, including streaming media,
should be illegal, provided that it is for your own personal use. However,
selling it or distributing it to others may violate copyright laws.

For sale:

(The "Radio Crazy" is baaaaakkkk!!!)Hi!

Partial interest in 1 KW AM daytimer in small Alabama city. Total asking price is only $70,000 on terms with $10,000 down. Seller financing. There is NO real estate included.

Station is on the air since 1974. Only competition is one other AM station which is 1 KW days and reduced power at night. Both stations are non-directional.

This is a joint venture. There is an element of risk and you could lose all or part of your investment.

Active or inactive investors with at least $5,000 each are welcome. No individual may own more than 49 percent. This applies to me too! All investors would be on the board with full voting rights.

Tel: (478)741-1710 in Macon, GA.

Merry Christmas.

73,

Meyer Gottesman, W6GIV

Subject: DEC 27th BBC TO AIR BEATLES CHRISTMAS RADIO SPECIAL
Date: 22 Dec 2004 13:18:36 -0800
Organization: http://groups.google.com

BBC TO AIR BEATLES CHRISTMAS RADIO SPECIAL
DECEMBER 27th SHOW FEATURES LEGENDARY FAN CLUB DISCS
PROGRAM WILL AIR ON BBC RADIO & INTERNET

On Monday December 27, Britain's BBC Radio 2 network will broadcast a two-hour radio special centered on the seven Beatles Christmas records
produced exclusively for their fan club members between 1963-1969. The
program is structured as a documentary about the legendary recordings.

The show airs in the UK 5pm-7pm GMT on BBC's Radio 2 network. It should also be possible to hear the show over the internet on BBC's website. Air time in the US: Eastern time: 12 noon - 2pm EST, Pacific time: 9am - 11am PST.

http://www.bbc.co.uk/radio2/r2music/documentaries/beatles/

The original recordings were distributed to British Beatles fan club members by mail on flimsy plastic 7" 45-rpm "flexi-discs" in distinctive paper covers. The discs naturally had a very low audio fidelity. American Beatles fan club members (who of course were a year
behind the Brits) missed out on the 1963 Christmas recording and received annual recordings from 1964-1969. For the first few years they
were pressed onto plastic-coated postcards - which was the standard US format for novelty-style recordings. For the last couple of years they were distributed on the UK-style "flexi-disc."

Given that none of the Beatles' Christmas material (save the song "Christmas Time Is Here Again" from the 1967 fan club disc) has ever been commercially released - and the fact that the material will be aired on the very copyright-conscious BBC - it is virtually certain that special permission has been obtained from Apple to allow the broadcast of extracts from the flexi-discs.

(Though US Beatles radio shows bend the rules and frequently play clips
from these discs during the holiday season - to be strictly accurate -
they are NOT legally available for broadcast. The government-licensed
BBC would not risk copyright claims from Apple by playing unsanctioned
material.)

The radio special brings up the issue of whether the Christmas
recordings might ever be released commercially in the future. There was
actually once a legally-issued, limited-edition private release album
that presented all seven recordings. It was created by the Official
Beatles Fan Club (for whom all the original recordings were made.) It
pressed up a 12" vinyl album called "The Beatles Christmas Album" in
1970 - which was made available to existing (and new) fan club
members in the UK and USA that Christmas. The price was nominal - but
the purchase had to be in conjunction with payment of the fan club
subscription for the upcoming year.

Bear in mind that the Beatles had very publicly split up in the April
of that year - so there was certainly not going to be any new Beatles
Christmas recording for fan club members that December! Nor one might
imagine - was there a strong motive for the UK and US fan clubs to be
renewing memberships - let alone recruiting new members. Fan clubs in
those days were about active artists - not disbanded groups.

In any event - that 1970 release while technically legal - was
certainly not a full commercial release in retail outlets.

The only official release to date of any material from the original
seven recordings is a full-length version of the song "Christmas Time
Is Here Again" - heard several times in truncated form on the 1967 fan
club record - which was included as track 4 of the "Free As A Bird"
CD single released in November 1995.

There has been speculation before from fans about a commercial CD
release of all the recordings - but there has never been official
word about plans to release the material.

There are currently many audio and video projects that would seem to
be of greater priority - not least the re-mastering of the entire
official Beatles audio catalogue on CD. Plus the possible first CD
release of the album "Live At The Hollywood Bowl." And DVD projects
ranging from "Help!" "Magical Mystery Tour," "Let It Be," and
"Shea Stadium" to a collation of all the TV promotional films.

On the other hand - as one very respected senior Beatles insider has
privately told his friends - the recent, very controversial release of
the "Capitol Albums" box-set of the 1964 Americanized, duophonic,

artificially echo-enhanced recordings (which has caused great dismay among Beatles purists) indicates that the motivation for releasing Beatles product is now primarily driven by the profit motive rather than by choices that honor the Beatles' artistic heritage.

However - if an album is ever released of these seven Christmas fan club recordings - at least there will be no controversy about which versions to release. Unlike the Capitol versions of the Beatles British
catalogue - which were sonically altered, sliced and diced by corporate
"suits" in America to accommodate what they presumed were American tastes - the US fan club never presumed to tamper with the Beatles' artistic choices. So the only versions that exist to be released are the original British recordings as approved by the Beatles. And for that true Beatles fans can be grateful.

The radio show has been produced by "Ten Alps" - an independent TV/radio production company recently set-up by Band-Aid/Live-Aid creator Sir Bob Geldof. The show description from the production company's website reads:

A Beatles Christmas - BBC Radio 2

A Beatles Christmas highlights a fascinating slice of the Beatles legacy and features rare material, focussing on the traditional Christmas records which were sent out exclusively to Beatles fan club members from 1963-1969. These recordings not only featured Christmas songs by the Beatles, but also include entertaining ad-libs and pantomime banter between all 4 Beatles, which provide a fascinating insight into how their lives changed dramatically between '63 & '69. Kenny Everett produced and featured in the Beatles Christmas records in
1968 & 1969. Zak - Ringo's son, designed the cover of the 1969 record.
The 1966 record, with a cover designed by Julian Lennon, was called Pantomime and featured a toast to the Queen. These records were a Christmas tradition for thousands of Beatles fans around the world.

http://www.wholewheatradio.org

Whole Wheat Radio is an unpretentious, interactive, independent music world community. The webcast originates from a cramped 12x12 cabin in Talkeetna, Alaska. It's as close to Northern Exposure's funky radio station as you can get. (Yup, there's a moose that hangs around the cabin. And an adorable monkey too.) They broadcast 24 hours/day, 7 days/week, 365 days/year with the help of tireless DJs - human and otherwise. They've been on-the-air since August of 2002 and have served up well over a million individual 'listens' to independent musicians' tunes.

hour, add the carrots and potatoes,
and simmer till root vegetables break with a fork.
Cook a fresh pot of long grained white rice.

Pre-mie Pot Pie

When working with prematurely delivered newborns (or chicken) use sherry;
red wine with beef (buy steak or roast, do not pre-boil).

Pie crust (see index)
Whole fresh pre-mie; eviscerated, head, hands and feet removed
Onions, bell pepper, celery
&#65533; cup wine
Root vegetables of choice (turnips, carrots, potatoes, etc) cubed

Make a crust from scratch - or go shamefully to the frozen food section
of your favorite grocery and select 2 high quality pie crusts (you
will need one for the top also).
Boil the prepared delicacy until the meat starts to come off the bones.
Remove, de-bone and cube; continue to reduce the broth.
Brown the onions, peppers and celery.
Add the meat then season, continue browning.
De-glaze with sherry, add the reduced broth.
Finally, put in the root vegetables and simmer for 15 minutes.
Allow to cool slightly.
Place the pie pan in 375 degree oven for a few minutes so bottom crust is not soggy,
reduce oven to 325.
Fill the pie with stew, place top crust and with a fork, seal the crusts together
then poke holes in top.
Return to oven and bake for 30 minutes, or until pie crust is golden brown.

Sudden Infant Death Soup

SIDS: delicious in winter, comparable to old fashioned Beef and Vegetable Soup.
Its free, you can sell the crib,

all over your house from
carrying too much, nor will they have to make 10 trips back and fourth from the
service stations.

Roast Leg of Amputee

By all means, substitute lamb or a good beef roast if the haunch
it is in any way diseased. But sometimes surgeons make mistakes,
and if a healthy young limb is at hand, then don?t hesitate to cook
it to perfection!

1 high quality limb, rack, or roast
Potatoes, carrot
Oil
celery
onions
green onions
parsley
garlic
salt, pepper, etc
2 cups beef stock

Marinate meat (optional, not necessary with better cuts).
Season liberally and lace with garlic cloves by making incisions,
and placing whole cloves deep into the meat.
Grease a baking pan, and fill with a thick bed of onions,
celery, green onions, and parsley.
Place roast on top with fat side up.
Place uncovered in 500° oven for 20 minutes, reduce oven to 325°.
Bake till medium rare (150°) and let roast rest.
Pour stock over onions and drippings, carve the meat and
place the slices in the au jus.

Bisque ° l?Enfant

Honor the memory of Grandma with this dish by utilizing her good
silver soup tureen and her great grandchildren (crawfish, crab or
lobster will work just as well, however this dish is classically
made with crawfish).

Stuffed infant heads, stuffed crawfish heads, stuffed crab or lobster shells;
make patties if shell or head is not available
(such as with packaged crawfish, crab, or headless baby).
Flour
oil

onions
bell peppers
garlic salt, pepper, etc.
3 cups chicken stock
2 sticks butter
3 tablespoons oil

First stuff the heads, or make the patties (see index)
then fry or bake.
Set aside to drain on paper towels.
Make a roux with butter, oil and flour,
brown vegetables in the roux, then add chicken stock and
allow to simmer for 20 minutes.
Add the patties or stuffed heads, and some loose crawfish,
lobster, long piglet, or what have you.
Cook on low for

add onions, peppers, and celery (all chopped finely)
and season well.
Place in a large bowl and cool.
Add seasoned breadcrumbs and a little of the tomato gravy,
enough to make the mixture pliable.
Divide the stuffing among the cabbage leaves then roll.
Place seam down in a baking pan.
Ladle tomato gravy on top,
and bake at 325&#65533; for 30 - 45 minutes.

```
Umbilical Cordon Bleu

Nothing is so beautiful as the bond between mother and child,
so why not consume it?
Children or chicken breasts will work wonderfully also.

4 whole umbilical chords (or baby breasts, or chicken breasts)
4 thin slices of smoked ham, and Gruyere cheese
Flour
eggwash (milk and eggs)
seasoned bread crumbs
1 onion
minced
salt
pepper
butter
olive oil

Pound the breasts flat (parboil first if using umbilical
cords so they won?t be tough).
Place a slice of ham and cheese on each, along with some minced onion
then fold in half, trimming neatly.
Dredge in flour, eggwash, then seasoned breadcru

the stuffing:
Marinate the flesh in a mixture of soy and teriyaki sauces
then stir fry in hot oil for till brown - about 1 minute, remove.
Stir-fry the vegetables.
Put the meat back into the wok and adjust the seasoning.
De-glaze with sherry, cooking off the alcohol.
Add broth (optional) cook a few more minutes.
Add the cornstarch, cook a few minutes till thick,
then place the stuffing into a colander and cool;
2 hours
Wrap the rolls:
Place 3 tablespoons of stuffing in the wrap, roll tightly -
corner nearest you first, fold 2 side corners in,
wrap till remaining corner is left.
Brush with egg, seal, and allow to sit on the seal for
a few minutes.
Fry the rolls:
325? if using egg roll wraps, 350? for spring roll wraps.
Deep fry in peanut oil till crispy golden brown, drain on paper towels.

```
Lemon Neonate

Turkey serves just as well, and in fact even looks a bit like a
well-dressed baby. By the time you turn the child?s breast into
cutlets, it will be indistinguishable. The taste of young human,
although similar to turkey (and chicken) often can be wildly
different depending upon what he or she has consumed during its
10 to 14 months of life...

4 well chosen cutlets (from the breasts of 2 healthy neonates)
2 large lemons (fresh lemons always, if possible)
Olive oil
Green onions
Salt
pepper
cornstarch
neonate stock (chicken, or turkey stock is fine)
garlic
parsley
fresh cracked black pepper
```

Season and saut? the cutlets in olive oil til

baby butt
2 tablespoons each:
salt
black, white and cayenne peppers
celery salt
garlic powder
parsley flakes
brown sugar
1 teaspoon sage
2 onions
6 cloves garlic
bunch green onions, chopped

Cut the children?s butts and the beef roast into pieces
that will fit in the grinder.
Run the meat through using a 3/16 grinding plate.
Add garlic, onions and seasoning then mix well.
Add just enough water for a smooth consistency, then mix again.
Form the sausage mixture into patties or stuff into natural casings.

Stillborn Stew

By definition, this meat cannot be had altogether fresh,
but have the lifeless unfortunate available immediately after delivery,
or use high quality beef or pork roasts (it is cheaper and better to
cut up a whole roast than to buy stew meat).

1 stillbirth, de-boned and cubed
? cup vegetable oil
2 large onions
bell pepper
celery
garlic
? cup red wine
3 Irish potatoes
2 large carrots

This is a simple classic stew that makes natural gravy,
thus it does not have to be thickened.
Brown the meat quickly in very hot oil, remove and set aside.
Brown the onions, celery, pepper and garlic.
De-glaze with wine, return meat to the pan and season well.
Stew on low fire adding small amounts of water and
seasoning as necessary.
After at least half an hour, add the carrots and potatoes,

and simm

different depending upon what he or she has consumed during its
10 to 14 months of life...

4 well chosen cutlets (from the breasts of 2 healthy neonates)
2 large lemons (fresh lemons always, if possible)
Olive oil
Green onions
Salt
pepper
cornstarch
neonate stock (chicken, or turkey stock is fine)
garlic
parsley
fresh cracked black pepper

Season and saut&#65533; the cutlets in olive oil till golden brown, remove.
Add the garlic and onions and cook down a bit.
Add some lemon juice and some zest, then de-glaze with stock.
Add a little cornstarch (dissolved in cold water) to the sauce.
You are just about there, Pour the sauce over the cutlets,
top with parsley, lemon slices and cracked pepper.
Serve with spinach salad, macaroni and cheese (homemade) and iced tea...

Spaghetti with Real Italian Meatballs

If you don?t have an expendable bambino on hand,
you can use a pound of ground pork instead.
The secret to great meatballs, is to use very lean meat.

1 lb. ground flesh; human or pork
3 lb. ground beef
1 cup finely chopped onions
7 - 12 cloves garlic
1 cup seasoned bread crumbs
&#65533; cup milk, 2 eggs
Oregano
basil
salt
pepper
Italian seasoning, etc.
Tomato gravy (see index)
Fresh or at least freshly cooked spaghetti or other pasta

Mix the ground meats together in a large bowl,
then mix each of the other ingredients.

Make balls about the size of a baby?s fist
(there should be one lying around for reference).
Bake at 400°for about 25 minutes -
or you could fry them in olive oil.
Place the meatballs in the tomato gravy, and simmer for several hours.
Se

bell peppers
Wooden or metal skewers

Marinate the meat overnight.
Get the grill good and hot while placing meat, vegetables, and
fruit such as pineapples or cherries on the skewers.
Don?t be afraid to use a variety of meats.
Grill to medium rare,
serve with garlic cous-cous and saut&#65533;ed asparagus.
Coffee and sherbet for desert then walnuts, cheese, and port.
Cigars for the gentlemen (and ladies if they so desire)!

Crock-Pot Crack Baby

When the quivering, hopelessly addicted crack baby succumbs to death,
get him immediately butchered and into the crock-pot, so that any
remaining toxins will not be fatal. But don?t cook it too long,
because like Blowfish, there is a perfect medium between the poisonous
and the stimulating. Though it may not have the same effect on your
guests, a whole chicken cooked in this fashion is also mighty tasty.

1 newborn - cocaine addicted, freshly expired, cleaned and butchered
Carrots
onions
leeks
celery
bell pepper
potatoes
Salt
pepper
garlic, etc
4 cups water

Cut the meat into natural pieces and brown very well in olive oil,
remove, then brown half of the onions, the bell pepper, and celery.
When brown, mix everything into

# 3260. Re: BBC to air Beatles Christmas Radio Special

Newsgroup: rec.radio.broadcasting
Date: 2004-12-25 20:56:28 UTC

or crawfish, babies are boiled alive!
You don?t need silverware, the hot spicy meat comes off in your hands.

6 live babies
1 lb. smoked sausage
4 lemons
whole garlic
2 lb. new potatoes
4 ears corn
1 box salt
crab boil

Bring 3 gallons of water to a boil.
Add sausage, salt, crab boil, lemons and garlic.
Drop potatoes in, boil for 4 minutes.
Corn is added next, boil an additional 11 minutes.
Put the live babies into the boiling water and cover.
Boil till meat comes off easily with a fork.

Oven-Baked Baby-Back Ribs

Beef ribs or pork ribs can be used in this recipe,
and that is exactly what your dinner guests will assume!
An excellent way to expose the uninitiated to this highly misunderstood
yet succulent source of protein.

2 human baby rib racks
3 cups barbecue sauce or honey glaze (see index)
Salt
black pepper
white pepper
paprika

Remove the silverskin by loosening from the edges,
then stripping off.
Season generously, rubbing the mixture into the baby?s flesh.
Place 1 quart water in a baking pan, the meat on a wire rack.
Bake uncovered in 250? oven for 1? hours.
When browned, remove and glaze,
return to oven and bake 20 minutes more to form a glaze.
Cut ribs into individual pieces and serve with extra sauce.

Fresh Sausage

If it becomes necessary to hide the fact that you are eating
human babies, this is the perfect solution.
But if you are still paranoid, you can substitute pork butt.

5 lb. lean chuck roast
3 lb. prime baby butt
2 tablespoons each:
salt
black, white and cayenne peppers
celery salt
garlic powder
parsley flakes
brown sugar
1 teaspoon sage
2 onions
6 cloves garlic
bunch green onions, chopped

Cut the

1 cup chopped celery
Vegetable oil (or hog fat)
Salt, pepper, garlic, etc.

Lightly brown onions, celery, garlic and meat in large heavy pot.
Add a little water and the greens (which should be thoroughly cleaned and washed).
Smother slowly for at least 2 hours, adding small amounts of water
when it starts to stick.
Stir frequently.
When ready - serve with rice, grilled smoked sausage, green salad, and iced tea.
Coffee and apple pie then brandy.

Maternity Ward Pot Luck Dinner

If you can?t get anything fresh from the hospital, nursery, or morgue;
you can at least get rid of all the leftovers in your refrigerator.

1 - 2 lbs. cubed meat (human flesh, chicken, turkey, beef...)
1 -2 lbs. coarsely chopped vegetables
(carrots, potatoes, turnips, cauliflower, cabbage...)
Bell pepper
onions
garlic
ginger
salt pepper, etc.
Olive oil
butter

Brown the meat and some chopped onions, peppers, and garilic in olive oil,
place in baking dish, layer with vegetables seasoning and butter.
Bake at 325&#65533; for 30 - 45 minutes.
Serve with hot dinner rolls, fruit salad and sparkling water.

B&#65533;b&#65533; Buffet 1

Show off with whole roasted children replete with apples in mouths -
and babies? heads stuffed with wild rice. Or keep it simple with a
hearty main course such as stew, lasagna, or meat loaf.

Some suggestions

Pre-mie pot pies, beef stew, leg of lamb, stuffed chicken, roast pork spiral ham,
Cranberry pineapple salad, sweet potatoes in butter, vegetable platter, tossed salad with

Shish Kababes

As old as the hills, this technique has employed seafood, beef, pork, lamb, poultry, and vegetables; just about anything can be grilled, and young humans are no exception!

High quality marinade (Teriyaki and garlic perhaps)
1 inch cubes of tender meat, preferably from the nursery
Onions
bell peppers
Wooden or metal skewers

Marinate the meat overnight.
Get the grill good and hot while placing meat, vegetables, and
fruit such as pineapples or cherries on the skewers.
Don?t be afraid to use a variety of meats.
Grill to medium rare,
serve with garlic cous-cous and saut&#65533;ed asparagus.
Coffee and sherbet for desert then walnuts, cheese, and port.
Cigars for the gentlemen (and ladies if they so desire)!

Crock-Pot Crack Baby

When the quivering, hopelessly addicted crack baby succumbs to death, get him immediately butchered and into the crock-pot, so that any remaining toxins will not be fatal. But don?t cook it too long, because like Blowfish, there is a perfect medium between the poisonous and the stimulating. Though it

before you go for the real thing.
Whole chicken is much more efficient and inexpensive than buying pieces.

1 tiny human, cut into pieces
2 cups flour
Onion, garlic
Salt
pepper
garlic powder
cayenne pepper
hot sauce, etc.
Oil for frying

Mix milk, eggs, hot sauce in a bowl, add chopped onion and garlic.
Season the meat liberally, and marinate for several hours.
Place seasoned flour in a paper or plastic shopping bag,
drop pieces in a few a time, shake to coat thoroughly,
then deep fry in hot oil (350�) for about 15 minutes.
Drain and place on paper towels.

Miscarriage with Mustard Greens

Why waste it? Otherwise, and in general, use ham or salt pork to season greens.
The technique of smothering greens can be used with many vegetables;
green beans work especially well. Meat is not necessary every day, don?t
be afraid to alter any dish to vegetarian tastes.

1 premature baby, born dead
Large bunch of mustard greens
2 white onions, 1 cup chopped celery
Vegetable oil (or hog fat)
Salt, pepper, garlic, etc.

Lightl

meat (human flesh, chicken, turkey, beef...)
1 -2 lbs. coarsely chopped vegetables
(carrots, potatoes, turnips, cauliflower, cabbage...)
Bell pepper
onions
garlic
ginger
salt pepper, etc.
Olive oil
butter

Brown the meat and some chopped onions, peppers, and garilic in olive oil,
place in baking dish, layer with vegetables seasoning and butter.
Bake at 325° for 30 - 45 minutes.
Serve with hot dinner rolls, fruit salad and sparkling water.

B°b° Buffet 1

Show off with whole roasted children replete with apples in mouths -
and babies? heads stuffed with wild rice. Or keep it simple with a
hearty main course such as stew, lasagna, or meat loaf.

Some suggestions

Pre-mie pot pies, beef stew, leg of lamb, stuffed chicken, roast pork spiral ham,
Cranberry pineapple salad, sweet potatoes in butter, vegetable platter, tossed salad with
tomato and avocado, parsley new potatoes, spinich cucumber salad, fruit salad
Bran muffins, dinner rolls, soft breadsticks, rice pilaf, croissants
Apple cake with rum sauce, frosted banana nut bread sherbet, home made brownies
Iced tea, water, beer, bloody marys, lemonade, coffee

The guests select food, beverages, silverware... everything from the buffet table.
They move to wherever they are comfortable, and sit with whoever they choose.
Provide trays so your guests will not spill everything all over your house from
carrying too much, nor will

the infant and set aside.
Stuff the cavity where the child?s genitals and anus were located
using  cup per pound of meat.
Tie the arms flat to the body, then pull the skin flaps up to close the cavity.
Now tie the thighs up tight to hold it all together.
Place breast side up in a large metal roasting pan.
Bake in 325 oven covered for 2 hours.
Remove cover, stick a cooking thermometer deep into one of the
baby?s buttocks and cook uncovered till thermometer reads 190,
about another hour.

Pro-Choice Po-Boy

Soft-shelled crabs serve just as well in this classic southern delicacy.
The sandwich originated in New Orleans, where an abundance of abortion clinics
thrive and hot French bread is always available.

2 cleaned fetuses, head on
2 eggs
1 tablespoon yellow mustard
1 cup seasoned flour
oil enough for deep frying
1 loaf French bread
Lettuce
tomatoes
mayonnaise, etc.

Marinate the fetuses in the egg-mustard mixture.
Dredge thoroughly in flour.
Fry at 375 until crispy golden brown.
Remove and place on paper towels.

One of those towers is used by KROQ (FM) to support an auxiliary antenna.

KROQ (FM), under Infinity, is one of its biggest moneymakers in L.A., probably
bigger than the old KFWB (AM).

# 3271. Orkney - Radio station trial cancelled

Saturday, December 25, 2004

The trial Orkney radio station planned to start in January has been cancelled.

The licence-holder, Martin Gilbert, of Dounby, said the problem was "one of those logistical things that we're not able to solve in time" but would not go into any more detail.

The station was to operate in Kirkwall from January 29 to February 25 using a restricted service licence.

Syndicated talker Stan Major hangs it up (for now). Stan’s worked as many hours on the air as anybody we can think of in recent years (and some difficult overnight and morning drive shifts). Now he tells National Radio Network owner Alex Langer “we had a good run, but I’m just tapped out.” A big part of that — dealing with the loss of his only daughter to cancer. That was the first week of December. Langer hopes Stan will be amenable to working in the future. But we asked Stan if he’ll be doing any other airwork for now. He says “nope, nothing.” National Radio Network’s “American Breakfast” now clears in markets like Boston, Pittsburgh, St. Louis, Phoenix, and Sarasota. Stan also airs on the Cable Radio Network. Last broadcast: December 31. Reach Stan at “StanMajor@aol.com.”

# 3276. Cuban radio signal interferes with WQAM

Newsgroup: rec.radio.broadcasting
Date: 2004-12-27 19:09:43 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cqpmln$2mb$1@xuxa.iecc.com>
Source record: 3115

By Charles Elmore
Palm Beach Post Staff Writer
Tuesday, December 21, 2004

You're in your car, heading out for a Monday night Dolphins game. You dial up a pre-game radio show. Reception is awful. What gives?

Cuba is jamming the broadcast.

It's not necessarily a government plot, but it is an irritant to international relations as far as many sports fans are concerned. The source of the trouble is a Cuban station over which American regulators have no control, and it's stepping on WQAM-560AM in Miami. Fans in Palm Beach and Broward counties suffer most.

"There is a station at the same frequency as WQAM, and their power has increased," said George Corso, chief engineer at WQAM. "They're annoying the daylights out of us."

WQAM has received dozens of calls and e-mails, mostly from Palm Beach and northern Broward counties, he said. WQAM's signal is weaker there, and more vulnerable to interference, particularly at night.

The signal of the Cuban station on the same 560AM frequency has been measurably stronger since October, Corso said. The interference was noticeable at the beginning of the 2003 World Series, and then seemed to subside until it came back with a vengeance recently.

WQAM has measured the problem and reported it to the Federal Communications Commission, but the agency has no jurisdiction over a station in Cuba.

"We're telling people to write their congresssman," Corso said.

A call to the Cuban Interest Section in Washington, the equivalent of a Cuban embassy, was not returned Monday.

By Andrei Lankov
12-22-2004

If you, our reader, fiddle about with the tuning of your radio set, sooner or later a militant march-like music will fill your room. This indicates that you have come across a North Korean radio broadcast _ they can be easily received in the Seoul area.
The history of North Korean broadcasting began in October 1945, with what was from 1946 called Radio Pyongyang. In 1948 it was renamed the Korean Central Broadcasting Station or KCBS. Up to this day the station remains a mainstay of the North Korean domestic broadcasting media.

North Korean broadcasting produces a rather bizarre impression on a foreigner (or, for that matter, on a South Korean). In the North Korean broadcast music alternates with short information blocks. Every hour begins with the news, largely identical to that published by Rodong sinmun. Then there are several minutes of marches or songs about Kim Il-sung, Kim Jong-il, or other lofty political subjects. Those songs are followed by a short 5-10 minute talk _ either a commentary on the internal situation, or on South Korea, or on the philosophy of juche. Often, articles from Rodong sinmun are also broadcast on radio. The intonation of the announcers is always peculiarly exaggerated, not to say hysterical.

The South Korean scholars often make a painstaking analysis of the content of North Korean programming. According to a recent estimate, in 2000 the KCBS programming spent 34.2 percent of its time praising Kim Jong Il or Kim Il-sung, 28.8 percent encouraging the workers to toil even harder, 17.4 percent explaining and promoting the juche ideology, and 12.0 percent telling stories about the suffering of the South Korean ``masses���� and schemes of the ``Seoul puppets.����

Most programs are as boring as articles from Rodong sinmun, even for the North Koreans who are deprived of better food for thought. However, there are some programs that target specific audiences, like ``Soldiers�� Hour���� or ``Young Pioneers�� Hour,���� and they enjoy some popularity within their target audience.
KCBS also broadcasts programs in foreign languages _ Russian, Chinese, Japanese, Arabic, and Spanish. Their content is, once again, poorly presented propaganda. Alas, the North Koreans have been very inept in their PR activity in the West. The problem is not the message: after all we have seen how very unpleasant regimes managed to win the heart-felt support of the Western public (or at least its Right or Left-inclined sectors). The problem is the production, and the concomitant blatant inability to understand the mindset of foreign audiences.

KCBS broadcasts some 22 hours a day from its headquarters in the Moranbong district of Pyongyang. The owners of the standard North Korean radio sets can listen to KCBS alone, since their contraptions lack tuning and are fixed on the wavelength of this official broadcast. This means that until the recent influx of small transistor radios, smuggled in from China, the North Koreans were stuck with KCBS.

However, KCBS is not the only battleship in North Korea''s broadcast system fleet. There are a number of others, but these target largely or exclusively the South.
First of all, I should mention Radio Pyongyang. It was established in 1967 as the ``Second KCBS'''' and acquired its present name in 1972. It broadcasts programs that are somehow adjusted to the tastes of the South Korean audience, as well as to overseas Koreans. It also has an FM branch whose transmitters target the northern part of South Korea. The ``FM Radio Pyongyang'''' broadcasts musical programs, with an emphasis on classical music. It mixes that with radio dramas and book readings that eulogize the North and criticize the South. It cannot normally be heard in the North, and its intended audience are younger South Koreans.

Radio Pyongyang does not make a secret of whom it represents. However, the North is engaged in ``black propaganda'''' as well. The North-based ``Voice of National Salvation'''' declares itself to be a clandestine station secretly broadcasting from South Korean territory, and managed by the local leftist underground. I do not know whether anybody is silly enough to believe this improbable statement, but it is how the ``Voice of National Salvation'''' describes itself. It actually broadcast from Haeju and employs a number of South Korean announcers and editors who have defected to the North, or who were kidnapped by the North Koreans (the difference in some instances between abduction and defection is hardly clear-cut).

It is unlikely that the efforts of the ``Voice'''' are especially successful. However, it is difficult to deny that the Southern perception of the North has changed greatly over the last decade. But that is another story''

Since many people believe the Cuban high power operation is in
retaliation for the US' support of Radio and TV Marti, they should
write their congressmen and suggest the interference might go away if
Radio/TV Marti went away.

In the UK RCS supply a piece of software called "DabText" which can send out the song title via the serial port.. Worth enquiring about it. RDS and Radiotext has been used for many years over here so it might be the software hasn't made it over the pond yet.

Since many people believe the Cuban high power operation is in retaliation for the US' support of Radio and TV Marti, they should write their congressmen and suggest the interference might go away if Radio/TV Marti went away.
>>

Lessee ...

Cuba was a signatory of NARBA (but later abrogated that treaty).

NARBA gave the United States 25 (count 'em) Class I-A clears, Mexco and Canada each 6 Class I-A clears, the Bahamas one Class I-A clear (and a U.S. Class I-B priority on that frequency), and Cuba one Class I-A clear (and a U.S. Class I-B priority on that frequency).

All of this with no permissible foreign operations on any U.S. Class I-A clear with the exception of 830 and 1030 to Mexico (limited to 5 kW ND, and limited to Mexico, DF), for which the U.S. got 800 and 900 (limited to 5 kW ND, and limited to Alaska) plus 1050 and 1220 (limited to 50 kW DA-1, protecting the entire U.S.-Mexican border, and limited to New York City and Cleveland, respectively).

The U.S. got many additional Class I-B clears, while Canada and Mexico got a few Class I-B clears, whereas neither the Bahamas nor Cuba got any Class I-B clears at all.

In view of this apparent disparity, what do you think the reaction of Castro would, or should be?

And, all of this goes way back to 1939 ... long before Radio Marti.

NOT in the non-binary groups! It's less of an issue than it used to be
but I believe there are still cancelbots looking for large binaries in
unmoderated non-binary groups. Traditionally, this was to permit
server operators with limited bandwidth/storage space to choose
newsgroups so as to avoid very large postings.

i guess you decided to opt out in mentioning that clear channel was also the spawning pool for one of the most liberal talk hosts in america, Randy Rhodes. and no... she didnt get fired for her political views, she became syndicated by none other than Air America. if you were to ask her about her feelings toward clearchannel, it would be appreciative.

The administration and Congress are about as likely to remove Radio/TV Marti as George Bush is likely to resign next week. It doesn't make much sense to have programming which can't be heard easily in much in Cuba but I must admit that I prefer a war of radio signals to an actual invasion or US sponsored attempted coup in Cuba too.

It is indeed shameful that the US can't just negotiate with Cuba and has Cuba hesitating to buy US agricultural products once againbecause they might be attached as assets by US Courts but that's life under the present political setup with no improvement in sight. The US probably would do just as well offering to broadcast Cuban broadcasts over some local stations in exchange for the Cuba doing the same for Cuban stations as it's doing now but that's probably also something to hope for in vain.

NARBA is a moot point now. There are "gentlemen's agreements" allowing I-B stations in Canada and Mexico on U. S. I-A channels. The Bahamas operates a I-B on 810 khz, a U. S. I-B clear, in addition to its I-A clear on 1540 khz. (These are just a few examples). The question is whether there should be a new NARBA, or whether the gentlemen's agreements continue as they are.

In this environment, Cuba would have all the clear channel frequencies it would need. Therefore, what is happening with WQAM, is that the Cuban station is not directional. However, in the case of WQAM, the jamming is not deliberate because WQAM does not broadcast in Spanish. The deliberate jamming is aimed at high power Miami area stations on 670, 710, and 1140 Khz broadcasting in Spanish, and also Radio Marti.

Although....it was Castro who abrogated Cuba's commitment to NARBA. Before then,
Cuba and the US got along famously, and there was no problems in Cubans getting U-S
radio, or Floridians Cuban radio. And, Rich is right. When we make nice with Cuba,
Castro throttles back the blowtorches, since the whole island does perfectly well
with 5kW on most channels (which shoots down your point that Cuba is entitled to 1As
or Bs). It's only when the U-S government starts up with some provocative propaganda
intiative that Castro smokes Florida (and points north...I remember how hard it was
to listen to Jean Shepherd on WOR when the fight was on between the two antagonists,
as there was an operation on 710 which ran 250kW or some such in Cuba).

Since the other four NARBA-signatory nations appear to have no trouble obeying restrictions they agreed to 65 years ago, Castro ought to stop acting like a bully/crybaby and attempt to negotiate something better for his country.

Oops, forgot: Castro is a Communist, and the other four nations won't negotiate squat with him. There goes that theory.

>>
The question is whether there should be a
new NARBA, or whether the gentlemen's agreements continue as they are.
>>

I guess you have little real idea how broadcast allocations actually work.

There are no "gentleman's agreements", but there are treaties, such as NARBA, and "Rio".

Plus the U.S.-Mexican Broadcast Agreement and the U.S.-Canadian Broadcast agreement.

All coordinated through the State Department, not through a "smoke filled" room.

>>
The Bahamas operates a I-B on 810 khz, a U. S. I-B clear, in addition to its
I-A clear on 1540 khz. (These are just a few examples).
>>

Bad examples, as there are no more Class I-B stations.

All Class Is were merged into Class A by "Rio". All Class IIs and Class IIIs were merged into Class B by the same treaty.

There are no Class A (ex-Class I-B) stations in North America on 810 besides KGO and WGY.

The Bahamas has two stations, a Class A (ex-Class I-A) on 1540, and a Class C (ex-Class IV) on 1240.

Do you want a thing that does everything automatically, or do you want
to do it by hand?

My personal feeling is that equalizing each individual call by hand until
it sounds right will buy you more than anything else you can do in your
signal chain. But it takes time.

I'd tend to skip the gating because the gating artifacts annoy the hell
out of me when there is a hum on the line. The hum is bad, but the hum
is worse when it's pumping in and out to my mind. I'd tend to go with
a slow AVC-style soft-knee compression and follow with some hard limiting,
but I really doubt you need much limiting.

Yeah, the OP's complaint sounded like a case of 8:43 am ionospheric
scramble. NOT.

Probably it's a case of a robo-station falling apart, like they always do.
We've got an automated AMer in Baltimore that never gets anything right.
(Or can they actually bill double, since they usually play two commercials
simultaneously?)

# 3296. Special programme tomorrow - the future of international broadcasting

Newsgroup: rec.radio.broadcasting
Date: 2004-12-29 16:28:43 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cqulvr$4ss$1@xuxa.iecc.com>
Source record: 3135
Cross-posted to: alt.satellite.radio.europe,rec.radio.broadcasting,rec.radio.shortwave

Dear Communications World listener,

Again this year, I will be guest host of the New Year's edition of VOA's Talk to America.

This year the program will be Friday, 31 December after the news at 1600 UTC (new time for TTA).

My friends and I will discuss the future of international broadcasting.

Call us and join the discussion: +1-202-619-3111. Or send me an e-mail with your telephone number, and we will call you just before or during the program.

Frequencies:

To Asia on 6160, 7125, 9645, and 9760 kHz shortwave plus 1143 kHz medium wave.

To Europe/Middle East/North Africa on 9685, 11835, and 15255 kHz shortwave; and via Hot Bird 3, transponder 76, HB15.

To Africa on 15240, 17715 and 17895 kHz shortwave, plus 909 and 1530 kHz medium wave.

And worldwide via the live audio stream at http://www.voanews.com/english/Webcasts.cfm.

Best wishes for 2005!

Kim

Hello Gentlemen ... & Lovely Ladies:

1.) Are we sure that the interference is aimed toward the South Florida market?

2.) Is this a directional antenna used in Cuba?

3.) Is it a modification to the directional antenna in Cuba?

4.) Is it intentional?

I have not noticed the change in Ft. Myers, but then again, it is not one of my button stations.

Jeff in Sa-ra-so-ta

# 3298. Number Of AM Stations Still On Downswing.

Newsgroup: rec.radio.broadcasting
Date: 2004-12-29 16:28:46 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cqulvu$4t9$1@xuxa.iecc.com>
Source record: 3139

The FCC's latest quarterly station count indicates that the number of commercial AM stations on the air slid from 4,803 at the end of Q3 2003 to 4,770 at the end of Q3 2004. This continues a trend that has been seen by the senior broadcast band all year. At the same time, the FCC counts 6,217 FM stations on the air at the end of Q3. That's 10 more than last year. Including noncommercial FMs, there were a total of 13,450 radio stations on the air at the end of Q3.

Their space will be taken up by IBOC sidebands.

>
>3.) Is it a modification to the directional antenna in Cuba?

No, it's a single stick, I believe.

>4.) Is it intentional?

Depends on how you think about it. No doubt they are intentionally running higher power on 560, but whether they are doing it to try and get their signal out to the US or to jam US stations, I don't know. I'd rather doubt it in this case... I rather suspect that they are doing it in an attempt to improve coverage in Cuba without the expense and difficulty of a proper directional array.

I think if they _had_ a proper east-west array they could get good coverage without the interference issues.

>I have not noticed the change in Ft. Myers, but then again, it is not

# 3302. Russia/Ukraine: Voice of Russia signal partially jammed by local station

Newsgroup: rec.radio.broadcasting
Date: 2004-12-29 21:13:33 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cqv6lt$nrv$1@xuxa.iecc.com>
Source record: 3146

Text of report in English by Russian news agency ITAR-TASS

Moscow, 28 December: [The] medium wave broadcast of the Voice of Russia has been partially jammed by a local station in Kiev since the first half of December, a source in the Voice of Russia told ITAR-TASS on Tuesday [28 December].

The source said that the jamming signal was not authorized by the International Electric Communication Union [presumably the International Telecommunication Union] or the international plan of medium and long wave broadcasts.

The Voice of Russia has been broadcasting live programmes to the CIS and Baltic countries for 15 hours a day since spring 2004. It is using 999 kHz frequency in broadcasts to Kiev via a Grigoriopol transmitter with the capacity of 1,000 kW.

# 3303. Radio-station call letters are just confusing

Newsgroup: rec.radio.broadcasting
Date: 2004-12-29 21:13:34 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cqv6lu$ns6$1@xuxa.iecc.com>
Source record: 3141

Dec. 29, 2004

OK, OK, so maybe if you were in your car and traveling at the speed of sound you could hear the rear speakers. OK? But you wouldn't be able to hear sound behind the car.

Let's just drop it, shall we? I'm not feeling so hot anyway, and I just want to get on with things.

And we have important business today. It's a long story, but depending on the answer to today's question, some guy might have to apologize to his boss' 15-year-old son in front of the whole office, and naturally he doesn't want to have to do that. ement

This is the matter at hand:

Is it true that all radio and TV stations east of the Mississippi have call letters beginning with "W," and all stations west of the Mississippi have call letters beginning with "K"?

The boss' son says this is so, and the other guy says it is not. And he is correct so he doesn't have to apologize to the kid in front of everybody.

The kid's mistake was in using the word "all."

In 1912, when the federal government started licensing land-based radio stations, it was decided that Western stations should get the K designation and Eastern stations would be W's. The boundary line started at the Texas-New Mexico line, and then ran north, jogging along the eastern edge of Colorado, and then along the eastern edges of Wyoming and Montana.

This worked out just fine until 1923 when the Federal Communications Commission decided the K-W boundary should be the Mississippi River. Don't ask me why they did this. I don't know.

And don't ask me about the parts of Minnesota north of the headwaters of the Mississippi. I do know the answer to that, but I don't want to get too far off the subject here.

Anyway, when they decided to move the boundary to the Mississippi, they also said that existing "W" stations in the regions between the old and new boundaries could keep their original call letters if they wanted to. And later radio stations that branched out into television were allowed to use their radio call letters for the new medium.

Hence, we now have in Oklahoma City radio stations WKY and WWLS along with a host of "K" stations. In Iowa, WOI broadcasts in AM and FM from Ames, while many of the state's other stations have "K" designations.

Those are just a few examples. There are more, maybe not a lot, but enough to keep this guy from eating crow in front of the whole office.

# 3304. Re: Cuban radio signal interferes with WQAM

Newsgroup: rec.radio.broadcasting
Date: 2004-12-29 21:13:35 UTC
From: mnmaniac@aol.com
Message-ID: <cqv6lv$nsa$1@xuxa.iecc.com>
Source record: 3143

After reading this group, I decided to check it out for myself last night.

Here in Orlando, the Cuban signal on 560 is completely obliterating WQAM. The strength of the Cuban signal is such that it is receivable on my cheapest radio, a small AM/FM portable which I bought about 10 years ago for $10.

Normally, WQAM puts a weak but listenable signal here both day and night. I have never before heard a Cuban on 560, either day or night.

Now, the only way WQAM can be heard is by nulling the Cuban, using the excellent directional characteristics of my C. Crane Radio. Even so, the Cuban station mixes with WQAM, as the axis between Miami and Cuba from here is less than a full 90 degrees.

I also noticed the Cuban station was overmodulated to the point of distortion. What makes this interesting is that this station seems to be a network affilliate. The other receivable Cuban stations on the same network (600, 620, and 640) are normally modulated and not distorted. This suggests the overmodulation on 560 could be intentional as this would cause maximum "tearing" and interference to WQAM.

Sorry about the mistake in the classification. However I easily receive
ZNS3, Freeport, Bahamas, on 810 khz day and night from Florida. The
announcer says that the station's power is 10 kw.

> All Class Is were merged into Class A by "Rio". All Class IIs and Class
IIIs

Those are the two stations serving Nassau. The station on 810 is in Freeport.

There is also a noticeable group of stations that do not follow the K/W
rule:
KDKA, KQV, and KYW, all in Pennsylvania. These call latters may have been
asigned before the FCC adopted the K/W rule. There may also have been a
station in Michigan that was mistakenly assigned a K call a few years ago.
My latest records do not list this station.

WQAM is in English. There is no need to jam it.

There was a while in the 80's when a Cuban operation on 820 was
walking all over WNYC-AM, too.

> or Bs).

Conductivity in Cuba is like much of Puerto Rico... horrible. The only net in pre-castro years that covered all of Cuba was Circuito CMQ, with about a dozen staitons, ranging from 50 kw to 10 kw. Today, the major networks have 5 or 6 staitons, but use 10 to 120 kw to fully cover the Island. There are a half dozen national nets, many regional nets and a lot of local stations.

Nope. It was a set of 50 kw stations in each "third" of Cuba, running regular programming. Now, there is a single 50 and two or three 10 kw stations.

>>

ZNS3 isn't in the FCC database, but what else is new.

Even if it was 50 kW, it would be a Class B as the Bahamas has no Class A priority on 810.

ZNS1 operates 50 kW DA-1 mainly because after "Rio" any Class I-A had to operate with 50 kW (U.S. and Canada, et. al.) and "at least 50 kW" (Mexico) in order to retain Class I-A status.

Before, ZNS1 (a Class I-A) operated with 10 kW, and Canada's 1580 Class I-A also operated with 10 kW.

Class I-Bs and Class I-Ns can be grandfathered at 10 kW , but Class I-As can't be.

This, not withstanding XERF operating with 10 kW for decades now.

The U.S. isn't going to force the issue with Mexico and demand that XERF operate with its "notified" 250 kW, simply becuase there is not that much utility power available in the area, and, anyway, the 250 kW transmitter doesn't exist anymore.

But, the Bahamas' 1540 and Canada's 1580 were indeed forced to move to 50 kW, which required both to install directional antennas to protect stations of lower class in the U.S.

Source record: 3052

I have 3 Pogo RadioYourway's (the original AM/FM) that I power with
3 NiMH D cells with voltage dropped with a diode, so they can record
a week without swapping batteries. (DC power plug snipped from
optional AC adapters, a very odd size. I want them as backup for
when there's a power failure and the regular recording doesn't work.)

They're okay, but the AM portion is _very_ insensitive; it really
has to be a really local station, I suppose to overcome internal
processor noise. You get more sensitivity back if you use it with
a MW loop, which is what I do.

At 16kbs you get 4.5hr on the 32mb model, and 18hr with the 128mb
model, only available at the Pogo site. You can add a memory
chip on either, though I haven't done that because I don't have a PC
with a USB port and so can't format one.

I use them without a PC at all, so can't speak to how well their
software works.

Recording with 2 AAA NiMH's that fit in the device is limited to
about 4 hours; with a good NiMH, maybe the full 4.5 hrs, most
of the time.

There is also a noticeable group of stations that do not follow the K/W
rule:
KDKA, KQV, and KYW, all in Pennsylvania. These call latters may have been
asigned before the FCC adopted the K/W rule. There may also have been a
station in Michigan that was mistakenly assigned a K call a few years ago.
My latest records do not list this station.

# 3320. Re: TIVO for Radio? Pogo/Olympus

Newsgroup: rec.radio.broadcasting
Date: 2004-12-30 23:53:50 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <cr24ee$mq4$1@xuxa.iecc.com>
Source record: 3062

I have 3 Pogo RadioYourway's (the original AM/FM) that I power with
3 NiMH D cells with voltage dropped with a diode, so they can record
a week without swapping batteries. (DC power plug snipped from
optional AC adapters, a very odd size. I want them as backup for
when there's a power failure and the regular recording doesn't work.)

They're okay, but the AM portion is _very_ insensitive; it really
has to be a really local station, I suppose to overcome internal
processor noise. You get more sensitivity back if you use it with
a MW loop, which is what I do.

At 16kbs you get 4.5hr on the 32mb model, and 18hr with the 128mb
model, only available at the Pogo site. You can add a memory
chip on either, though I haven't done that because I don't have a PC
with a USB port and so can't format one.

I use them without a PC at all, so can't speak to how well their
software works.

Recording with 2 AAA NiMH's that fit in the device is limited to
about 4 hours; with a good NiMH, maybe the full 4.5 hrs, most
of the time.

There was a while in the 80's when a Cuban operation on 820 was
walking all over WNYC-AM, too.

Sorry about the mistake in the classification. However I easily receive ZNS3, Freeport, Bahamas, on 810 khz day and night from Florida. The announcer says that the station's power is 10 kw.
>>

ZNS3 isn't in the FCC database, but what else is new.

Even if it was 50 kW, it would be a Class B as the Bahamas has no Class A priority on 810.

ZNS1 operates 50 kW DA-1 mainly because after "Rio" any Class I-A had to operate with 50 kW (U.S. and Canada, et. al.) and "at least 50 kW" (Mexico) in order to retain Class I-A status.

Before, ZNS1 (a Class I-A) operated with 10 kW, and Canada's 1580 Class I-A also operated with 10 kW.

Class I-Bs and Class I-Ns can be grandfathered at 10 kW , but Class I-As can't be.

This, not withstanding XERF operating with 10 kW for decades now.

The U.S. isn't going to force the issue with Mexico and demand that XERF operate with its "notified" 250 kW, simply becuase there is not that much utility power available in the area, and, anyway, the 250 kW transmitter doesn't exist anymore.

But, the Bahamas' 1540 and Canada's 1580 were indeed forced to move to 50 kW, which required both to install directional antennas to protect stations of lower class in the U.S.

Those of us affected by the sudden appearance of Cuban interference
might just conclude that it was just a coincidence that Radio Marti
appeared - and shortly after, WOR started getting complaints of
Spanish programming under our signal.

> or Bs).

Conductivity in Cuba is like much of Puerto Rico... horrible. The only net in pre-castro years that covered all of Cuba was Circuito CMQ, with about a dozen staitons, ranging from 50 kw to 10 kw. Today, the major networks have 5 or 6 staitons, but use 10 to 120 kw to fully cover the Island. There are a half dozen national nets, many regional nets and a lot of local stations.

Nope. It was a set of 50 kw stations in each "third" of Cuba, running regular programming. Now, there is a single 50 and two or three 10 kw stations.

Hi,

You were probably listening to a national program called "Little
Walters Time Machine". It's GREAT! Very unique.

It can also be heard online on WQMA OldiesRadio 1520 Friday's at 10am
eastern. Goto www.q1520radio.com

There are a LOT of other really good national oldies shows that air
there weekends too. Dick Clark, SuperGold, etc.

David....wouldn't Cubans looking to get propaganda-free radio from the U-S (not that this ideal is as easy to attain, anymore) be willing to learn English so as to listen to it? I think you're a bit too dismissive of the suggestion.

Since the very early 60's, it has been necessary to have a permit to learn English, and such permits are only delivered to those that have a government-mandated need to learn.

Russian was the second language in Cuban schools since that time, and only recently, in the last decade, has been abandoned.

Listening to US radio or TV is punishable by being declared an anticocial element, which reduces one's rations, makes many types of unemployment unattainable, and even affects where and whether one gets housing.

While many will make the effort to hear Radio Marti, as proven by surveys of emigrants who have left Cuba, it is really unlikely that many know enough English to understand the very colloquial English of WQAM, would risk doing so if they could, or would find anything at all of any interest to them even if they did listen.

Cuba is a totalitarian dictatorship.

## 3339. US Christian network on mediumwave in Romania

Newsgroup: rec.radio.broadcasting

# 3340. Radio Heritage Foundation launches web site

Newsgroup: rec.radio.broadcasting
Date: 2004-12-31 15:09:42 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cr3q3m$4va$1@xuxa.iecc.com>
Source record: 3078
Cross-posted to: rec.radio.broadcasting,rec.radio.shortwave

December 22 2004

A new web site (www.radioheritage.net ) has been launched to celebrate the story of radio broadcasting in the Pacific region, and to provide a home for a wide variety of radio heritage activities, exhibitions, archiving, research and advocacy projects covering New Zealand, Australia, the Pacific Islands and reaching as far as countries around the Pacific Rim.

'Radio has a long history in the Pacific' says Radio Heritage Foundation chairman David Ricquish.

'In fact, it's even claimed by some biographers that "Rutherford began what Marconi completed" in which case, New Zealand is the real home of radio broadcasting in the modern age'

Whether New Zealand's Lord Rutherford was indeed the true father of radio instead of Marconi is one of the hundreds of fascinating topics the Radio Heritage Foundation plans to investigate in the near future.

Currently, www.radioheritage.net contains information about various projects which the Foundation has underway, highlights radio heritage issues, and a selection of articles from its on-line archives project.

'We have hundreds of articles and thousands of images already available from our collections' says David Ricquish, and we'll be bringing these on-line as fast as resources allow. Our definition of "heritage" is anything up to a nano-second ago, so contemporary radio issues are as important to us as those of the 1920's or any other era' he adds.

'Radio has touched every aspect of our lives for almost a century now' says David Ricquish. "It has a social history, cultural, artistic, technological, heritage, genealogy and entertainment context' he says, 'and this web site, and indeed, the whole project, helps us understand just what the impact of radio on our lives continues to be in the new digital era.'

The Radio Heritage Foundation is a non-profit charity based in Wellington, New Zealand. Board members include prominent broadcasters from New Zealand, Australia and Europe and a growing number of contributors and volunteers loc ated across the Pacific from the USA, Canada and Japan, to Australia and New Zealand.
